Board Report

File #: 2021-0185, **File Type:** Agreement **Agenda Number:** 6.

REGULAR BOARD MEETING
APRIL 22, 2021

SUBJECT: NO-FEE LEASE OF METRO PROPERTY FOR CITY OF LOS ANGELES' SLAUSON CONNECT PROJECT

ACTION: APPROVE RECOMMENDATIONS

RECOMMENDATION

CONSIDER:

A. AUTHORIZING the Chief Executive Officer (CEO) to enter into a 30-year, no-fee lease agreement with the City of Los Angeles (City) to use a portion of the Metro-owned Harbor Subdivision Right-of-Way between Normandie and Budlong Avenues, City of Los Angeles ("Property"), for the City's Slauson Connect Project.

B. DECLARING that the Property is not necessary for use by Metro and is "exempt surplus land" as defined in Section 54221(f)(1)(D) of the California Surplus Land Act (California Gov. Code Sections 54220-54234).

C. CERTIFYING that the Board, acting as a responsible agency pursuant to the California Environmental Quality Act (CEQA) for the Slauson Connect Project, has considered the exemption documentation for the Slauson Connect Project and finds that the Slauson Connect Project is categorically exempt from CEQA and will not cause a significant impact on the environment.

D. AUTHORIZING Metro Real Estate to file a Notice of Exemption with the Los Angeles County Registrar-Recorder/County Clerk.

ISSUE

The design of Segment A of the Metro Rail-to-Rail/River Project (R2R) is complete, and it will be constructed on the south half of the 81-foot-wide parcel between Normandie and Budlong Avenues. The City's Council District 9, under the lead of Councilmember Curren D. Price, Jr., has proposed a long-term lease on the north half of the parcel for the City's Slauson Connect Project. Board approval is required to authorize a 30-year no-fee lease, declare the land as exempt surplus, and certify the CEQA findings.

BACKGROUND

The Harbor Subdivision ROW was acquired in 1993 from Burlington Northern Santa Fe (then The Atchison Topeka Santa Fe Railway Co.). It is part of a 24.5-mile rail corridor that stretches from south Los Angeles to the South Bay. The Property is along a stretch that is part of the R2R. Beyond R2R to the south is the Crenshaw/LAX Light Rail Project, and farther south of that will be the future C (Green) Line Extension to Torrance Project.

Since December 2015, the Property had been used as laydown and storage for the Crenshaw/LAX Project. That contractor vacated the Property in February 2021. It has since been taken over by the R2R contractor for its laydown and storage; that use is expected to end before the Slauson Connect Project moves to construction. The R2R team is coordinating with the Slauson Connect Project team and sharing design and environmental reports.

Prior to December 2015, the Property sat vacant. BNSF had not officially abandoned operating rights on the R2R stretch until 2019. However, there was no demand from any outside parties or Metro departments to use the site even prior to it being formally vacated.

Location
The Slauson Connect Project is proposed to be located on the Property shown in Attachment A. The Property is located on a wide stretch of the Harbor Subdivision, adjacent to Segment A of the R2R. The R2R will include dedicated bike paths, a pedestrian path, and landscaping. The design of Segment A of the R2R is complete, and it will be constructed on only the south half of the 81-foot-wide parcel between Normandie and Budlong Avenues. The City is requesting this long-term lease as a partner project on the remainder, or north half of the parcel, approximately 40’ x 1,237’ or 49,480 square feet, for its proposed Slauson Connect Project.

Slauson Connect Project
The Slauson Connect Project is envisioned to be a business incubator (for digital and technical businesses) and work resource center. The proposed 20,000 square foot facility will include a community meeting room and public spaces (that can also be used for transportation-related classes and events), indoor/outdoor spaces, dedicated bathrooms for Metro operators, and Metro ticket vending machines.

The City has designed the Slauson Connect Project’s landscaping and open space to look almost seamless with the R2R’s design, as if one planned project. Combined, the landscaping will create verdant outdoor space for users of both projects, and for the community at large, in this mostly industrial/commercial environment.

Applicable CEQA Categorical Exemption
In consultation with the City of Los Angeles as the lead agency for the proposed Slauson Connect Project, Metro as a responsible agency for the Project has considered the relevant environmental issues as set forth in Attachment C. As indicated in the Attachment, the Slauson Connect Project has been evaluated by the City of Los Angeles, Department of Public Works, and been assessed as qualifying for a categorical exemption under the State CEQA Guidelines Section 15332 (Class 32 In-Fill Development Project).

Consistent with the attached Summary of Lease Terms (Attachment B), further negotiations between Metro and the City of Los Angeles are projected to result in a formal lease agreement, to be submitted to the Los Angeles City Council for vote and approval, at which time the City is projected to make its own CEQA findings as the lead agency, based upon the exemption documentation currently completed by the City's Department of Public Works. In acting as the governing body of a responsible agency for the Slauson Connect Project, this Board's consideration of the Attachments, including the relevant exemption documentation, and the Board's independent finding that the Slauson Connect Project meets all criteria of the Section 15332 exemption and will not cause a significant impact on the environment, will satisfy Metro's CEQA requirements for the Slauson Connect Project.

Exempt Surplus Land
The California Surplus Land Act (California Government Code Section 54221 *et seq*.) (the "Act"), as amended in October 2019, provides for the disposition of "surplus land" or "exempt surplus land" as defined in the Act. "Surplus Land" means land owned in fee simple by any local agency for which the local agency's governing body takes formal action in a regular public meeting declaring that the land is surplus and is not necessary for the agency's use. Pursuant to the Act, land may be declared either "surplus land" or "exempt surplus land". As defined in Section 54221(f)(1)(D) of the Act, exempt surplus land includes "surplus land that a local agency is transferring to another local, state or federal agencies for the agency's use".

As mentioned above, the Property, comprising a total of approximately 49,480 square feet, is part of the Harbor Subdivision ROW that was originally acquired for future transportation projects. The Property has not been scheduled for use in connection with R2R because of the extra width of the parcel at this location. The City desires to use the Property for its Slauson Connect Project. Under these circumstances and pursuant to the Act, the Property is exempt surplus land.

DISCUSSION

No-fee lease
Metro staff recommends a no-fee lease for the Slauson Connect Project for the following reasons:

- The Property takes up the north-half of a wide parcel of ROW. Metro's R2R project requires only the south-half of the parcel, and there is no other Metro project planned for the foreseeable future.
- The Property is a narrow strip, approximately 40' wide, which has limited alternative use. Given its narrow configuration, it is very likely that the Property would remain vacant if Metro did not enter into this lease for Slauson Connect. Metro would incur costs to fence and maintain the vacant lot.
- The Slauson Connect Project adjacent to R2R would create a cohesive use and serve to enhance the attractiveness and utility of the R2R.
- The Slauson Connect Project has incorporated into its design several amenities for the benefit of Metro employees and patrons.
- The Slauson Connect Project meets the Metro Vision 2028/Strategic Plan objective to enhance communities and lives through mobility and access to opportunity

Term
The City's funding grants for the Slauson Connect Project require a 30-year term. Since there are no additional Metro projects anticipated for the Property, staff recommends approval of the requested 30 -year term.

Equity Platform:

Slauson Connect will be a digital and technical business incubator and work resource center. Quoting from the City's grant application and engineering report, it will serve to "*spur the economic revitalization of the community, not just as a result of ongoing impacts of Covid-19"* but *"as the aftermath of disinvestment for nearly three-quarters of a century*." The Slauson Connect Project meets pillars of Metro's Equity Platform goals: II. Listen and Learn; III. Focus and Deliver; and IV. Train and Grow.

DETERMINATION OF SAFETY IMPACT

The Slauson Connect Project is anticipated to have minimal impact on safety, with planned mitigations. The R2R will initially install fencing that will separate it from the Slauson Connect section, before and during the Slauson Connect construction phase. However, the fence will ultimately be removed so both projects will serve as one cohesive development. Once the fence is removed, access to the R2R section will come strictly from the north side, along the common boundary of both projects; there will not be an actual crossing to Slauson Avenue, which is used solely for vehicle traffic. There will be no driveway or curb cuts from Slauson Avenue along this stretch. Reviews by Metro Engineering and Safety will ensure that no trees, bushes, other landscaping, or signage will be installed that could impede visuals from both sides of the boundary.

FINANCIAL IMPACT

There will be no rent for this lease. There is no loss of revenue if this Slauson Connect lease is approved, because the property is not currently under a revenue-generating lease nor likely to be attractive for a future lease.

Impact to Budget

Adoption of the recommended action will have no negative impact to the Fiscal Year 2022 budget for bus or rail operations.

IMPLEMENTATION OF STRATEGIC PLAN GOALS

This project addresses and meets the following Metro Vision 2028/Strategic Plan:

- Provide high-quality mobility options that enable people to spend less time traveling;
- Deliver outstanding trip experiences for all users of the transportation system;

- Enhance communities and lives through mobility and access to opportunity; and
- Transform LA County through regional collaboration and national leadership;

ALTERNATIVES CONSIDERED

The Board may choose to not approve this lease. If the lease is not approved, the City will likely not move forward with the Slauson Connect Project. Given the narrow dimensions of the Property, being 40' wide, it may not be suitable for leasing for other uses, and will thus remain vacant, making it an easy target for dumping, vandalism, and other illegal activities.

The Board may choose not to approve the lease at the April board meeting. This alternative is not recommended because the City will be using certain grant funding that is dependent on the City acquiring this long-term lease in April 2021.

NEXT STEPS

If approved by the Metro board, the final terms of the lease will be negotiated, subject to County Counsel and Risk Management review. The City will also need to approve the lease and certify the environmental findings. Metro Real Estate will file a Notice of Exemption with the Los Angeles County Registrar-Recorder/County Clerk

The Slauson Connect Project design and engineering plans will be submitted to Metro's Adjacent Development team which will route it through the usual review process. The work is being coordinated with R2R and other Metro teams.

SLAUSON CONNECT

Summary of Terms and Conditions

The Los Angeles County Metropolitan Transportation Authority ("LACMTA") and City of Los Angeles (City) have agreed to cooperate in Council District 9 and City's efforts to construct a recreational facility and complete outdoor improvements, known as the Slauson Connect/Southern Pacific Trails (Project), on the Metro-owned railroad right-of-way ("Slauson ROW").

It is understood and agreed that this letter does not contain all the essential terms that the parties expect will be part of the lease agreement for the Project. Further negotiations between the parties are contemplated before the binding agreement will be prepared. The performance by either party before execution of a formal agreement of any of the obligations that may be included in an agreement between the parties when negotiations are completed will not be considered evidence of intent by either party to be bound by the terms of this letter. Metro Board and City Council approval is required before the lease can be executed.

The general terms and conditions are as follows:

1. TERM. LACMTA and City agree in principle regarding construction of a Project along the Slauson ROW and to affect that effort, LACMTA is willing to issue a long-term ground lease for 30 years.
2. CONSTRUCTION IN FIVE (5) YEARS. If the project is not constructed within 5 years, the lease will be terminated, unless this time is otherwise extended by written agreement between the Parties.
3. RENT. There will be no charge for the ground lease.
4. SITE REMEDIATION. LACMTA has agreed to a specific scope of site remediation to be further defined in the MOU.
5. SURPLUS LAND ACT. LACMTA must comply with the State Surplus Land Act and will use reasonably best efforts to assist City in meeting the requirement of an exempt public project as defined in the Surplus Land Act.
6. ENVIRONMENTAL CLEARANCE. The City has compiled a CEQA analysis and will continue to make all documentation available for Metro's consideration prior to lease execution.
7. INDEMNITY. The City will hold LACMTA harmless and indemnify LACMTA for its participation in the Project except for LACMTA's sole negligence.
8. SUBLEASING/SUBLICENSING. City will agree not to sublease any part of the site for third-party, for-profit businesses without the written authorization of LACMTA.
9. DESIGN AMENITIES FOR LACMTA EMPLOYEES AND CUSTOMERS. The facility will reserve for Metro employees and customers the below uses. City and Metro will cooperate to determine exact locations, dimensions, specifications, terms, etc. as the project is being designed. The final floor plan will be approved in writing by Metro.
    a. Indoor space for active transportation related classes
    b. At least two nonpublic restrooms for transit operators
    c. Public restrooms for pedestrians/cyclists
    d. Cyclist related amenities such as water bottle filling stations, seating and shade areas, outdoor bike repair areas.
    e. Designated parking areas for bicycles
    f. Metro Ticket Vending Machines

PROJECT TITLE: SLAUSON CONNECT RECREATION CENTER
W.O. E1908821

LOG REFERENCE

PROJECT LOCATION: The Project site is located at 5820 Normandie Boulevard, beginning at the northeast corner of Slauson Avenue and Normandie Blvd, and stretching east to Budlong Ave in the South Los Angeles community planning area. The overall project site is approximately 81feet wide by 1,250 feet long, totaling approximately 2.29 acres. See Figures 1 and 2. The site is owned by Metro and will be leased to the City via the Department of General Services through a 30-year lease agreement.

T.G. PAGE 673 - GRID J5 to PAGE 674 - GRID A5

DESCRIPTION OF NATURE, PURPOSE, AND BENEFICIARIES OF PROJECT: The proposed Slauson Connect Recreation Center project includes a lease agreement between the City of Los Angeles and Metro, the site owner, and the construction by the City of a facility up to 20,000 square feet that would provide recreational space, a childcare center, and community meeting rooms. Public open space and pedestrian and bike trails would be created on the remainder of the site. The project has the goal of increasing recreational space, community meeting space, and child care opportunities in an underserved neighborhood in South Los Angeles (see narrative for additional information).

JUSTIFICATION FOR PROJECT EXEMPTION: This project is exempt from the California Environmental Quality Act (CEQA) pursuant to State CEQA Guidelines Article 19, Section 15332. Additionally, the project is exempt pursuant to *Los Angeles CEQA Guidelines* Article III, Section 1 Class 32. The project involves in-fill development in an urbanized area. The project is consistent with the general plan designation, zoning and policies; the site is less than 5 acres; the site has no valuable habitat; it can be adequately served by required utilities and public services; and approval of the project would not result in any significant impacts to traffic, noise, air quality or water quality. *None of the limitations set forth in State CEQA Guidelines 15300.2 apply (see narrative).*

CATEGORICAL EXEMPTION NARRATIVE

I. PROJECT DESCRIPTION, CONTINUED

The Slauson Connect Recreation Center project seeks to add much needed open space, increase the availability of recreational opportunities, and provide child care facilities in an underserved neighborhood in South Los Angeles. A building up to 20,000 square feet would be constructed to provide flex spaces to accommodate a variety of recreation related programs, a childcare center, and community meeting rooms. Public open space and pedestrian and bike trails would also be constructed.

The project site, located at 5820 Normandie Boulevard, begins at the northeast corner of Slauson Avenue and Normandie Blvd, and stretches east to Budlong Ave. The overall project site is approximately 81 feet wide by 1,250 feet long totaling approximately 2.29 acres. The site, a former railroad right-of-way, is owned by Metro and will be leased to the City via the Department of General Services. Most recently the site has been used as a soil storage site and to store construction materials.

Sustainable project design features include photovoltaic panels, a vegetated roof (Green Roof), and energy efficient mechanical, electrical and plumbing systems. The project would be designed and constructed to achieve a Silver level certification for the Leadership in Energy and Environmental Design (LEED) rating system of the latest United States Green Building Council (USGBC) requirements. In an effort to reduce construction costs and expedite the completion of the project, the City has decided to utilize a Design Build methodology to deliver the project. The City intends to utilize this project to bridge the small business work equity gaps within South Los Angeles by increasing the contractor's local hire goals beyond that of the Project Labor Agreement (PLA). Funding of the project would be through a combination of Community Development Block Grants (CDBG), Proposition K (LA for Kids Program), and Council Office Discretionary funds.

Technical studies have been prepared that discuss the creation of offsite parking to support a facility of up to 20,000 square feet. If the facility constructed is 10,000 square feet or less, it is likely that all parking would be accommodated onsite.

Construction of the proposed Project is anticipated to occur over 11 months, from April 2022 to March 2023. The anticipated hours of construction are 7:00 a.m. to 6:00 p.m., Monday – Friday and after 8 am on Saturdays. No construction would occur on Sundays.

Unless otherwise stated, the proposed Project will be designed, constructed and operated following applicable laws, regulations, ordinances and formally adopted City standards including but not limited to:

- Los Angeles Municipal Code
- Bureau of Engineering Standard Plans
- Standard Specifications for Public Works Construction
- Work Area Traffic Control Handbook
- Additions and Amendments to the Standard Specifications for Public Works Construction

II. ENVIRONMENTAL REVIEW

Basis for Categorical Exemption

Class 32 Infill (CEQA Guidelines §15332) exempts projects characterized as in-fill development that meet the five conditions addressed in the following text:

a) *The project is consistent with the applicable general plan designation and all applicable general*

plan policies as well as with applicable zoning designation and regulations.

The proposed Project is entirely consistent with the existing zoning, general plan and all other applicable land use regulations. The project is located on a former railroad right-of-way. The area is zoned PF-1, which allows for uses including open space and community uses. The area has a General Plan land use designation of Public Facilities, along with designations for MTA Right-Of-Way Project Area, Transit Priority Area, Redevelopment Project Area- Council District 9, and State Enterprise Zone-Los Angeles.

b) The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.

The proposed Project site is an urban infill site, substantially surrounded by industrial, commercial and residential uses. The site on which the development would occur is in a highly urbanized area. The Project site has surrounding land uses that are a mix of developments and infrastructure consisting of surface streets and parking.

c) The project site has no value as habitat for endangered, rare or threatened species.

The site for the proposed Project is disturbed without vegetative cover or other potential conditions suitable for biological resources.

d) Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

Construction activities would not result in significant impacts related to traffic, noise, air quality, or water quality. See attached technical studies related to traffic, noise, air quality and historic records review related to hazardous materials. Project design and construction will comply with all regulatory requirements and standard specifications to address water quality concerns.

e) The site can be adequately served by all required utilities and public services.

The Project can be adequately served by all required utilities and public services because of the urban location and existing available resources.

In summary, Class 32 is intended to allow for infill projects that are consistent with the local General Plan and Zoning requirements. This class is not intended for projects that would result in any significant environmental impacts related to traffic, noise, air quality, or water quality. It may apply to residential, commercial, and/or mixed-use projects. As demonstrated in the text above, the proposed Project would require no change to land use zoning or designations and meets the requirements of Class 32.

Consideration of Potential Exceptions to use of a Categorical Exemption

The State CEQA Guidelines (CCR Sec 15300.2) limit the use of categorical exemptions in the following circumstances:

1. Location. Exemption Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located – a project that is ordinarily not significant in its impact on the environment may be significant in a particularly sensitive environment. Therefore, these classes are considered to apply all instances except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

This project is exempt from CEQA pursuant to State CEQA Guidelines Article 19, Section 15332 (Class 32). Therefore, this exception does not apply.

2. Cumulative Impact. This exception applies when, although a particular project may not have a significant impact, the cumulative impact of successive projects of the same type in the same place, over time is significant.

As a community use serving project, this project is not expected to result in any cumulative impacts. While other community and recreational use projects are occurring elsewhere in the City, they are occurring in different neighborhood locations and at different times. The proposed Project structures have an anticipated service life of approximately fifty years. Given the nature of the project and the life expectancy of the building structure, this project is not anticipated to result in a cumulative impact when considered with successive projects in the same place and over time. Other site improvements may be added in the future over time, such as additional recreational trails or stormwater management features, but they are not anticipated to result in any cumulative impacts.

3. Significant Effect. This exception applies when, although the project may otherwise be exempt, there is a reasonable possibility that the project will have a significant effect due to unusual circumstances. There is no reasonable possibility that the project will have significant effect due to unusual circumstances. Technical studies were prepared related to potential impacts from air quality, noise, traffic and hazardous waste from project construction activities and operations. All impacts were found to be less than significant.

Traffic and Transportation

The City of Los Angeles revised its procedures for transportation analyses in response to Senate Bill (SB) 743. The City's current Transportation Analysis Guidelines (TAG) were adopted in July 2019 and updated in July 2020 and require use of vehicle miles traveled (VMT) as the primary metric for assessing impacts under California Environmental Quality Act (CEQA), rather than intersection level of service (LOS). The City's TAG also requires additional analyses of project consistency with City transportation plans and policies as part of the CEQA process, as well as an evaluation of a Project's potential to result in geometric design hazards. It is anticipated that the amount of soil that would be excavated for project construction is over 20,000 cubic yards for an approximately 20,000 square foot building. A Transportation Assessment Memorandum (Attachment 1) prepared for the proposed project concluded that as a local-serving retail land use with less than 50,000 square feet, the proposed project is screened from further VMT analysis, and on that basis is determined to have a less-than-significant VMT impact. Per the City's criteria, the City's VMT Calculator tool was used to document that the Project has been screened from further VMT analysis. As part of this process, trip generation estimates were prepared for the Project and are discussed in greater detail in the memo. With a 20,000 square foot facility, the proposed Project is estimated to generate 571 daily trips.

The proposed Project would be constructed in accordance with the latest edition of the temporary traffic control provisions of the California Manual on Uniform Traffic Control (CA MUTCD), the Work Area Traffic Control Handbook (WATCH), and any traffic control requirements required by the Los Angeles Department of Transportation (LADOT).

Air Quality/Green House Gases

An Air Quality and Green House Gas Technical Report was prepared for the proposed Project (Attachment 2). Air quality impacts and greenhouse gas emissions from construction and operations would be less than significant. Best management practices include watering exposed areas four times a day to control dust during construction activities, in accordance with SCAQMD Rule 403, and the use

of USEPA Tier 4 engines for all off-road diesel-powered equipment greater than 50 horsepower used during construction.

Noise

A noise technical study was conducted (Attachment 3). The nearest sensitive receptor to the site is a single-family residence located east of the project site and across Budlong Avenue, approximately 60 feet away. Four other sensitive receptors (residences) surround the site at distances varying from 70 feet to 295 feet. Noise levels at all locations from construction activities and project operations would be less than significant. Best management practices for the project include screening roof mounted HVAC equipment with a structural parapet, housing emergency generators within an enclosure, and beginning high-noise producing construction activities after 8:00 am.

Hazards and Hazardous Waste

An environmental information database search was performed by EDR on March 12, 2021. The search included federal, state, tribal, and local databases. The site was not listed on any of the searched databases. Off-site properties/facilities listed in the database report were evaluated as to their potential to impact soil, soil vapor, and/or groundwater at the site. To supplement the information in the EDR report, the State Water Resources Control Board (SWRCB) GeoTracker and Department of Toxic Substances Control (DTSC) EnviroStor databases were reviewed. Several properties around the site to the north and south were listed on several environmental databases, including gasoline service stations, dry cleaning facilities, automotive repair shops, and plating facilities. The reported historical presence of USTs, former drycleaners, and listed releases of VOCs indicate that the site may have been impacted by these properties and is considered a VEC. See Historic Document Review (Attachment 4) for more information.

The site has been a railroad right-of-way (ROW) along Slauson Avenue to the south between 1923 and 2016. Equipment and materials often historically used in association with railroads, such as lead, ballast materials containing steel slag with potential regulated heavy metal concentrations, total petroleum hydrocarbon fuel leaks, polychlorinated biphenyl (PCB) leaks, and railroad lubricators utilizing petroleum products, normally have been used within the site. In addition, herbicides were often historically applied on railroad ROWs to prevent the growth of vegetation between railroad tracks. The presence of railroad tracks between 1923 and 2016 and associated staining observed in the 1970 aerial photograph is considered a recognized environmental condition (REC).

As part of the Metro Rail to Rail Active Transportation Corridor project, a Notice of Exemption and Categorical Exclusion were prepared by Metro in 2017 that discussed environmental sampling performed on the site. Concentrations of arsenic, lead, and semi-VOCs (SVOCs) were above cleanup goals. To clean up soils contaminated with arsenic, lead, and SVOCs, Metro has entered into a voluntary cleanup program (VCP) with DTSC. The spilled wood residue on the site is considered a REC. The potential presence of lead, arsenic, and SVOCs in connection with the ROW is also considered a REC. The project would follow Metro standards in complying with regulatory requirements from the California Public Utilities Commission (CPUC) and DTSC.

Recommendations as part of the Historic Document Review report include preparing a full Phase I ESA prior to obtaining title to the project site; conducting subsurface sampling of soil, soil vapor, and/or groundwater in areas of suspected impact mentioned in the recommended Phase I ESA; collecting soil samples at up to five feet bgs for waste characterization purposes; and preparing a soil management plan and site-specific health and safety plan (HSP) for construction activities detailing worker safety,

vapor monitoring, soil testing, and soil removal procedures. A Phase II ESA is currently underway on the site and is anticipated to be completed in June 2021. The City will follow the recommendations in the Phase II ESA regarding project design and construction activities.

Los Angeles is a vast urban area and it is not uncommon to find contaminated sites with past or present releases that have completed or are undergoing assessment and/or remediation throughout the region. Thus, it is not uncommon to find these conditions on project sites and this is not an unusual circumstance. The proposed project will follow regulatory requirements, standard best management practices, and Phase II ESA report recommendations. There is no reasonable possibility that the project will have a significant effect due to unusual circumstances.

4. Scenic Highway. A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway.

The locations of excavation were referenced against the database of scenic highways at (https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways) and no scenic highway is located within the vicinity of the project or within the project site. Since the proposed project is not within a state designated scenic highway or within sight of any state designated scenic highway, this exception has no application.

5. Hazardous Waste Site. This exception applies when a project is located on a site listed as a hazardous waste site under Government Code Section 65962.5

As of March 12, 2021, the State Department of Toxic Substances Control (DTSC) (Envirostor database at www.envirostor.dtsc.ca.gov) and the California Regional Water Quality Control Board (RWQCB) (Geotracker database at https://geotracker.waterboards.ca.gov/) have not listed any contaminated sites within the project site; therefore, this exception does not apply. Furthermore, the project site is not listed as a hazardous waste site under Government Code Sections 65962.5. Therefore, this exception does not apply.

6. Historical Resources. This exception applies when a project may cause a substantial adverse change in the significance of a historical resource.

The project will occur within areas previously disturbed by grading and installation of sewer lines, maintenance holes, drop connections and other utilities. Excavation of the ground is anticipated for this project. The depth of excavation is not anticipated to exceed the depth of previously disturbed soil.

In the event that unanticipated historical artifacts were encountered, City Engineer Standard Specifications, Section 6-3.2, (Greenbook, 2012) states: “If discovery is made of items of archaeological or paleontological interest, the Contractor shall immediately cease excavation in the area of discovery and shall not continue until ordered by the Engineer.” Therefore, during activities in which there will be ground disturbances (i.e., digging, drilling, etc.) if any evidence of archaeological, cultural, or paleontological resources are found, all work within the vicinity of the find shall stop until a qualified archaeologist can assess the finds and make recommendations. No excavation of any finds should be attempted by project personnel unless directed by a qualified archaeologist. Construction activities may continue in other areas. If the discovery proves significant under CEQA (Section 15064.5f; Public Resources Code or PRC 21082), additional work such as testing, or data recovery may be warranted.

The discovery of human remains is always a possibility during ground disturbances; State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Los Angeles County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The Los Angeles County Coroner must be notified of the find immediately. If the human remains are determined to be prehistoric, the Coroner will notify the Native American Heritage

Commission, which will determine and notify a Most Likely Descendent (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

As indicated above, the project is not anticipated to result in a substantial adverse change in the significance of a historical resource. Therefore, no substantial adverse impact to cultural resources is anticipated, and as such this exception does not apply.

Subject: Transportation Assessment Memorandum for the Slauson Connect Recreation Center Project

LA21-3266

This memorandum summarizes the results of transportation analyses conducted for the Slauson Connect Recreation Center Project (Project) in accordance with City of Los Angeles *Transportation Analysis Guidelines* (2020) and the California Environmental Quality Act (CEQA).

The City of Los Angeles revised its procedures for transportation analyses in response to Senate Bill (SB) 743. The City's current Transportation Analysis Guidelines (TAG) were adopted in July 2019 and updated in July 2020 and require use of vehicle miles traveled (VMT) as the primary metric for assessing impacts under California Environmental Quality Act (CEQA), rather than intersection level of service (LOS). The City's TAG also requires additional analyses of project consistency with City transportation plans and policies as part of the CEQA process, as well as an evaluation of a Project's potential to result in geometric design hazards.

This memorandum summarizes the results of the CEQA transportation analyses required for the Slauson Connect Recreation Center Project, and includes a review of whether the project conflicts with an adopted City program, policy, plan, or ordinance related to transportation, substantially increases hazards due to a geometric design feature or incompatible use, and a VMT analysis.

Study Scope

The scope of work for this study was determined in consultation with the Los Angeles Bureau of Engineering (BOE) and the Los Angeles Department of Transportation (LADOT) and is in accordance with the City's CEQA transportation thresholds of significance and LADOT's

Transportation Assessment Guidelines (TAG) adopted in July 2019[1] and revised in July 2020. The TAG establishes a set of guidelines, methods, and impact criteria for CEQA considerations that focus on vehicle miles traveled (VMT), geometric hazards, and policy conflicts. The TAG also establishes a framework for various non-CEQA analyses including a pedestrian, bicycle, and transit access assessment; a project access, safety, and circulation assessment; and project construction analysis. Each area of analysis is described in the TAG with a discussion of screening criteria, the methodology for analysis, impact/evaluation criteria, and potential mitigation options. Based on the screening criteria set forth in the TAG, the following issue areas described in the TAG are evaluated for the Project (the screening analysis is available in **Attachment A**):

TAG Issue Area	**Analysis Required?**
CEQA Analyses:	
Conflicts with Plans, Programs, Ordinances, and Policies	Yes
Causing Substantial Additional Vehicle Miles Traveled	Yes
Substantially Inducing Additional Automobile Travel	No
Geometric Design Features	Yes
Non-CEQA Analyses:	
Pedestrian, Bicycle, and Transit Access	No
Project Access, Safety, and Circulation	Yes
Project Construction	Yes
Residential Street Cut-Through	No

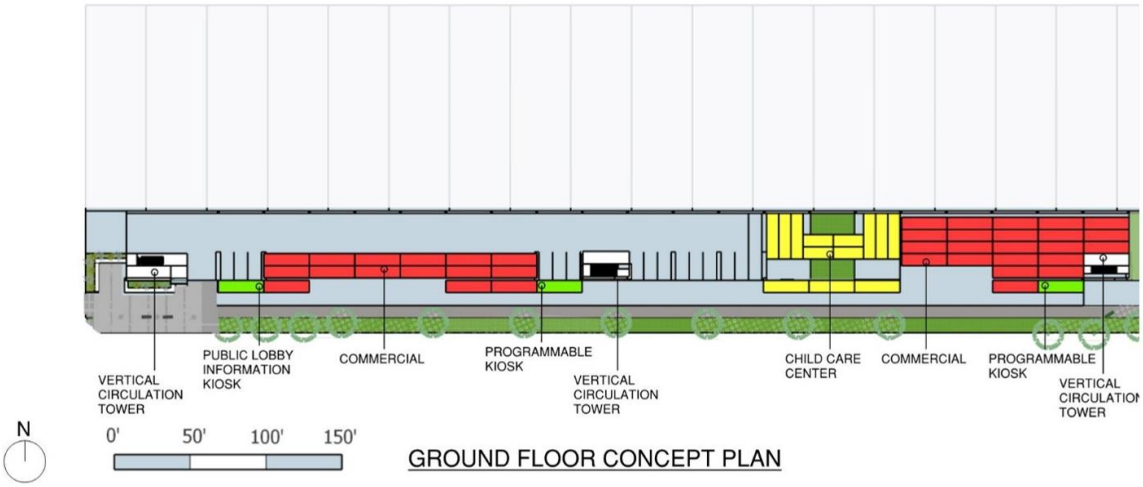
The base assumptions and technical methodologies were discussed in separate teleconferences held with LADOT on and then with BOE in March 2021. Due to the expedited schedule for completing this study, the analysis will be conducted in two phases, and LADOT waived the requirement to prepare a formal memorandum of understanding (MOU). This memorandum will cover the CEQA transportation analysis; the non-CEQA analysis required by the TAG will be conducted at a later date to be determined.

[1] On July 30, 2019, the Los Angeles City Council adopted a resolution formally implementing the City's updated transportation thresholds of significance for CEQA analyses. The TAG is the document providing the guidance for conducting both CEQA and non-CEQA transportation analyses.

Project Description

The Slauson Connect Recreation & Community Center Project seeks to add open space, recreational opportunities, and counseling and childcare facilities in an underserved neighborhood in South Los Angeles. According to the City's available planning documents the concept for the proposed facility is driven by social justice goals, and seeks to provide services that integrate the facility into the fabric of the community[2]. The three-story 20,000 square foot (sf) multi-faceted facility will also house a community meeting room and flex spaces to accommodate a variety of recreation-related social programs. The development is intended set the standard for sustainable design in South Los Angeles by incorporating a green roof, photovoltaic panels to meet net zero goals, stormwater capture and reuse systems, high-speed electric vehicle (EV) charging stations, and vertical gardens. The proposed Project footprint utilizes approximately one third of the overall site, as shown in Figure 1.

Figure 1: Project Site Plan



The 1,233-foot long by 81-foot wide 2.29-acre Project site is located at 5820 Normandie Avenue and bounded by Slauson Avenue to the south, Normandie Avenue to the west, Budlong Avenue to the east, and existing industrial developments to the north. It is owned by Los Angeles County Metropolitan Transportation Authority (Metro) and, until the early 2000s, was occupied by an active rail line known as the Harbor Subdivision. The site has most recently been used as a soil storage site in support of Metro K (formerly, the Crenshaw) Line construction. Metro is currently constructing an Active Transportation Corridor (ATC) with separate facilities for pedestrians and

[2] *Slauson Connect Recreation & Community Center Preliminary Supplemental Design Report*, BOE, July 17, 2020.

bicyclists along the rail right-of-way on the north side of Slauson Avenue between the Metro A (Blue) Line Slauson Station and the Metro K (Crenshaw) Line Fairview Heights Station. The Slauson Connect project will create a node along the new ATC. Metro welcomes the ATC-complementary Slauson Connect project and has offered the land free of charge with the stipulation that the ATC be unimpeded by the proposed Project.

In addition to the pedestrian facilities provided by the ATC, the Project will install sidewalks along the length of the Project frontage on Slauson Avenue adjacent to the ATC, and along Normandie Avenue. Vehicular access to the Project would be provided by a single two-way driveway located on the north end of Project site along Normandie Avenue. Access would be restricted to full-access ingress and right-turn egress only. The Project proposes to provide 14 parking spaces on-site in a ground-level garage contained within the structure of the building, as shown in Figure 2. This parking would be on the north end of the project site and would include three electric vehicle (EV) parking spaces and three handicapped spaces (Americans With Disabilities Act (ADA) compliant). The Project would also provide 10 short-term bicycle parking spaces and four long-term bicycle parking spaces in enclosed lockers. An additional 26 vehicle parking spaces, including six EV spaces and four ADA spaces, would be provided off-site in a separate lot located directly across the street from the proposed Project on the southeast corner of the intersection of Slauson Avenue & Normandie Avenue. That site is occupied by a vacant restaurant building, which would be demolished, and is served by four existing driveways, two on Slauson Avenue and two on Normandie Avenue.

Figure 2: Ground Floor Conceptual Plan

Existing Conditions

A comprehensive data collection effort was undertaken to develop a detailed description of the existing transportation system in the study area. The assessment of conditions relevant to this

study includes a description of the study area, an inventory of the local street system near the Project site, the existing and planned bicycle & pedestrian facilities, and the current and planned transit service in the study area.

Study Area

The project site is within the South Los Angeles Community Plan area of the city. The site is bounded by Slauson Avenue to the south, Normandie Avenue to the west, Budlong Avenue to the east, and existing industrial development immediately to the north. Development in the surrounding area is predominantly residential. The study area is an urban, semi-industrial setting located near transit with a variety of land uses and densities. The Project is considered infill development, as it is proposed to occupy a former railroad right-of-way. All the streets in the study area are under the jurisdiction of the City of Los Angeles.

Existing Street System

Major roadways serving the study area include Slauson Avenue in the east/west direction and Normandie Avenue in the north/south direction. The Harbor Freeway (Interstate 110, I-110) lies approximately 1.1 miles east of the site. This freeway provides regional access to and from the study area and Downtown Los Angeles to the north and the Port of Los Angeles to the south.

The characteristics of the major roadways serving the study area are described below. The street descriptions include the designation of the roadway under the *Mobility Plan 2035, An Element of the General Plan* adopted by the Los Angeles City Council in September 2016. The Mobility Plan 2035 modified the City's street standards previously included in the City's Transportation Element to create a better balance between traffic flow and other important street functions including transit routes and stops, pedestrian environments, bicycle routes, building design and site access. The roadways in the study area are defined as follows in the Mobility Plan 2035:

- Freeways—High-volume, high-speed roadways with limited access provided by interchanges that carry regional traffic through and do not provide local access to adjacent land uses.
- Arterial Streets—Major streets that serve through traffic and provide access to major commercial activity centers. Arterials are divided into two categories:
    - Boulevards represent the widest streets that typically provide regional access to major destinations and include two categories:
        - Boulevard I provide up to four travel lanes in each direction with a target operating speed of 40 mph.
        - Boulevard II provides up to three travel lanes in each direction with a target operating speed of 35 mph.
    - Avenues pass through both residential and commercial areas and include three

categories:

- Avenue I provide up to two travel lanes in each direction with a target operating speed of 35 mph.
- Avenue II provide up to two travel lanes in each direction with a target operating speed of 30 mph.
- Avenue III provide up to two travel lanes in each direction with a target operating speed of 25 mph.

- Collector Streets—Generally located in residential neighborhoods and provide access to and from arterial streets for local traffic and are not intended for cut- through traffic. Collector Streets provide one travel lane in each direction with a target operating speed of 25 mph.

- Local Streets—Intended to accommodate lower volumes of vehicle traffic and provide parking on both sides of the street. Local Streets provide one travel lane in each direction with a target operating speed of 15 to 20 mph. Local Streets can be:
  - Continuous local streets that connect to other streets at both ends
  - Non-Continuous local streets that lead to a dead-end

In addition, the Mobility Plan 2035 identifies corridors proposed to receive improved bicycle, pedestrian, transit and vehicle infrastructure improvements. Each of the networks are defined as the following:

- The Neighborhood-Enhanced Network (NEN) is a selection of streets that provide comfortable and safe routes for localized travel of slower-moving modes such as walking, bicycling, or other slow speed motorized means of travel.

- The Transit-Enhanced Network (TEN) is the network of arterial streets prioritized to improve existing and future bus service for transit riders.

- The Bicycle-Enhanced Network (BEN) is a network of streets that will receive treatments that prioritize bicyclists. Tier 1 Protected Bicycle Lanes are bicycle facilities that are separated from vehicular traffic. Tier 2 and Tier 3 Bicycle Lanes are facilities on roadways with striped separation. Tier 2 Bicycle Lanes are those more likely to be built by 2035.

- The Vehicle-Enhanced Network (VEN) identifies streets that prioritize vehicular movement and offer safe, consistent travel speeds and reliable travel times.

- The Pedestrian-Enhanced Districts (PEDs) identify where pedestrian improvements on arterial streets could be prioritized to provide better walking connections to and from the major destinations within communities.

Listed below are the primary streets that provide local access to the study area.

East - West Streets

Slauson Avenue is designated as a Modified Avenue II located adjacent to the Project site to the north and has two lanes in each direction. Parking is generally not permitted on either side of the street. Left-turn pockets are present at all intersections in the study area. Within the study area, Slauson Avenue is part of the Transit Enhanced Network (as a Comprehensive Transit Enhanced Street) and the Bicycle Enhanced Network (as part of the Bicycle Path Network). It is also part of the High-Injury Network.

North - South Streets

Normandie Avenue is designated as a Modified Avenue II and is located west of the Project Site. It provides two travel lanes in each direction. Parking is generally permitted on both sides of the street. Protected left turn lanes are provided at all major intersections. Within the study area, Normandie Avenue is designated as a Pedestrian Enhanced District and, north of Slauson Avenue, is on the High-Injury Network.

Budlong Avenue is designated as a Collector Street and is located east of the Project site. The roadway provides one travel lane in each direction. Parking is permitted on both sides of the street along most parts of the corridor. Within the study area, Budlong Avenue is part of the Neighborhood Enhanced Network.

Existing Public Transit Service

The Project site is served by a number of public transit lines. Slauson Avenue is served by Metro Local Route 108; eastbound and westbound stops are provided adjacent to the Project site at both Normandie Avenue and at Budlong Avenue. Route 108 provides east-west service along Slauson Avenue between Pico Riviera and Marina del Rey, and also provides connections to the Metro A and J Lines Slauson Avenue stations. Normandie Avenue is served by Metro Local Route 206; the closest stops are provided at West 57th Street (northbound) and adjacent to the Project site at Slauson Avenue (southbound). Route 206 provides north-south service on Normandie Avenue between the Metro B (formerly the Red) Line Vermont/Sunset station in Hollywood and the Metro C (formerly the Green) Line Vermont/Athens station in the Athens neighborhood in South Los Angeles, and also provides a connection to the Metro D (formerly the Purple) Line Wilshire/Normandie station in Koreatown.

Regional transit service is provided by Metro Rail and Bus Rapid Transit. Bus Rapid Transit service is available approximately 1.1 miles away on the Metro J (formerly the Silver) Line at the Slauson Avenue station. The closest light rail stations are located on the Metro E (formerly the Expo) Line at the Western Avenue and Vermont Avenue stations. Both stations are approximately 2.5 miles from the Project site. Prior to the opening of the proposed Project, Metro will begin service on the K Line, a new light rail line currently under construction and expected to open in late 2021 or early 2022. Once service begins on the K Line, the closest light rail station would be located 2.1 miles

away, at the future Hyde Park station, and would be directly accessible from the Project site for bicyclists and pedestrians via the ATC.

Metro recently announced its NextGen Bus Plan with the goal of implementing a new bus network in Los Angeles County that is more relevant and reflective of local and regional travel needs. Both Routes 108 and 206 will be modified as a result of the NextGen Bus Plan. Route 108 on Slauson Avenue will see improved service frequency, and service will be truncated west of Sepulveda Boulevard. Route 206 will also see improved service frequency.

Existing Bicycle and Pedestrian Facilities

There are no existing bicycle facilities within a half-mile of the Project site.

The existing pedestrian network is disjointed and deficient. There are currently no sidewalks adjacent to the Project site on Slauson, Normandie, or Budlong Avenues. For this reason, crosswalks are not provided on the north legs of the Project site-adjacent intersections of Slauson Avenue & Normandie Avenue and Slauson Avenue & Budlong Avenue. Curb ramps are not consistently provided at these intersections.

The *Mobility Plan 2035* identifies corridors proposed to receive improved bicycle, pedestrian and vehicle infrastructure improvements. Slauson Avenue is identified as part of the City's Bicycle Enhanced Network, particularly as part of the Bicycle Path Network. A 5.6-mile multi-use ATC is planned for the north side of Slauson Avenue between the Metro A Line Slauson Avenue station and the under-construction Metro K Line Fairview Heights station along the former rail right-of-way, and is currently under construction[3]. Construction on the ATC is expected to wrap up in Summer 2021. The ATC will provide a wide planted buffer between path users and the busy roadway, a 5-foot walking path for pedestrians, a 1-foot separated buffer between the pedestrian and bicycle facilities, and a 12-foot two-way bicycle path. Mixing zones at intersections would safely transition path users across the street, with bicyclists required to dismount, and curb access provided by ADA-compliant directional curb ramps. Other safety features of the project include pedestrian-scale lighting, left-turn protections, no right turn on red, automatic pedestrian phases, tight curb radii, and flush pedestrian crossings.

The Neighborhood Enhanced Network is the network of locally-serving streets planned to have traffic calming measures that close the gaps between streets with bicycle facilities. Within the study area, Budlong Avenue is designated as part of the planned Neighborhood Enhanced Network.

The High Injury Network (HIN) spotlights streets with a high concentration of traffic collisions that have resulted in severe injuries and deaths, with an emphasis on those involving people walking

[3] https://www.metro.net/projects/r2r/

and bicycling. Both primary Project frontages are located on streets that have been identified by the City as part of the HIN. These include:

- Slauson Avenue
- Normandie Avenue

The Project driveway would be located on Normandie Avenue, on a HIN street. The off-site parking facility, located on the southeast corner of the intersection of Slauson Avenue & Normandie Avenue, would utilize existing driveways located on both Slauson Avenue and Normandie Avenue, both of which are HIN streets.

Vehicle Miles Traveled Analysis

As part of new CEQA guidelines, proposed land use projects must assess whether they cause a substantial impact on vehicle miles traveled (VMT). The follow section summarizes an assessment of VMT generated by the Project.

LADOT developed a VMT Calculator tool to assess the potential VMT impacts of proposed development projects within the City. The VMT Calculator also assesses the effectiveness of selected Transportation Demand Management measures proposed for a project based on documented research. Analysis was conducted for the Project using the City's VMT analysis procedures and VMT Calculator.

VMT Impact Criteria

The City's VMT impact criteria for development projects is specified in the TAG. Per the criteria, a development project would have a potential significant impact if the Project meets one or more of the following:

- For residential projects, a development project may have a potential significant impact if it generates household VMT per capita exceeding 15% below the existing average household VMT per capita for the Area Planning Commission (APC) area in which the project is located (see table below). This criterion would not be used since the Project does not have a residential component.

- For office projects, a development project may have a potential significant impact if it generates work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located (see the table below). This criterion would not be used since the Project does not have an office component.

- Local-serving retail development tends to shorten trips and reduce VMT whereas regional-serving retail development can lead to substitution of longer trips for shorter ones and could increase VMT. Local-serving is defined as retail uses less than 50,000 square feet; these uses

are automatically assumed to have a less-than-significant impact. The TAG includes health clubs in its definition of local-serving retail; therefore, this criterion was applied to the Project VMT analysis.

- For mixed-use projects, evaluate each component separately and apply the impact criteria above for each individual land use. This Project is not a mixed-use project.

VMT Impact Criteria (15% Below APC Average)

Area Planning Commission	Daily Household VMT per Capita	Daily Work VMT per Employee
Central	6.0	7.6
East LA	7.2	12.7
Harbor	9.2	12.3
North Valley	9.2	15.0
South LA	6.0	11.6
South Valley	9.4	11.6
West LA	7.4	11.1

The Project is located in the South LA APC.

Impact Analysis

As a local-serving retail land use with less than 50,000 square feet, the proposed project is screened from further VMT analysis and on that basis is determined to have a less-than-significant VMT impact. Per the City's criteria, the City's VMT Calculator tool was used to document that the Project has been screened from further VMT analysis. As part of this process, trip generation estimates were prepared for the Project and are discussed in greater detail later in this memorandum. The proposed Project is estimated to generate 571 daily trips. The screening page of output from the VMT Calculator is provided in **Attachment B**.

Cumulative VMT

Per the TAG, a project could have a significant cumulative impact on VMT if the project has both a significant project-level impact as determined above and is not consistent with the Southern California Association of Governments' Regional Transportation Plan/Sustainable Communities Strategy (SCAG RTP/SCS) in terms of development location, density, and intensity.

As noted above, the Project is not projected to have a significant impact on VMT and no VMT

analysis is required. Given its location in a dense area of the City of Los Angeles served by public transit and its provision of features to encourage walking and bicycling, the Project would be consistent with the applicable goals and objectives of the SCAG 2016-2040 RTP/SCS[4] to locate developments in infill locations served by quality public transportation and facilitating active transportation. Therefore, the Project's cumulative impact on VMT would not be significant.

Trip Generation

As discussed in the Project Description, the proposed Project consists of a 20,000 sf multi-purpose recreation and community center. Trip generation rates from *Trip Generation, 10th Edition* (Institute of Transportation Engineers [ITE], 2017) were used to estimate the number of trips associated with the Project. The ITE 10th edition introduces and defines the geographic setting for four different settings/locations: Rural, General Urban/Suburban, Dense Multi-Use Urban, and City Core. In many instances, trip generation rates are provided for each land use by geographic setting. The Project is located in an area that meets the General Urban/Suburban ITE definitions; therefore, the trip generation rates for General Urban/Suburban were used. The total number of peak hour trips generated by the Project were adjusted to account for visitors to the site who would arrive by transit or other non-auto modes.

Transit/Walk Adjustment

Consistent with LADOT policies for transit adjacent developments, and to promote projects that include walkable site design and that facilitate the use of transit, walking, and other non-motorized modes, a 10% transit adjustment may be applied to Project Sites located within ¼ mile of a public bus stop. The Project Site is located within ¼ mile of stops along two Metro local bus routes, and in close proximity to other regional transit lines, and a diversity of land uses within reasonable walking distance. The transit adjustment accounts for trips made to and from the Project Site using public transit. The 10% transit/walk trip credit likely underestimates the percent of visitors to the site who would arrive to the Project via transit, walking, or bicycling. The Project is located in an area with high transit-dependency[5], suggesting that many visitors to the site would not have access to a vehicle to make their trip to the Project. Additionally, the Project's location directly along the Metro ATC provides an easy, safe, and comfortable way for visitors to arrive on foot or bicycle even from a distance, increasing the likelihood that a substantial proportion of visitors would choose non-auto transportation modes. Using the LADOT 10% transit/walk credit therefore provides a conservative estimate of the potential vehicle traffic generated by the proposed Project.

As shown in **Table 1**, the Project is estimated to generate 32 trips (21 inbound/11 outbound) during the AM peak hour and 42 trips (20 inbound/22 outbound) during the PM peak hour.

---

[5] https://www.metro.net/projects/r2r/

TABLE 1

Plans, Programs, Ordinances, or Policies Conflict Review

The City's TAG includes a review for conflicts with transportation-related plans, programs, ordinances, or policies. Based on applying the screening criteria, the threshold test is to assess whether a project would conflict with an adopted program, policy, plan, or ordinance that is adopted to protect the environment. A project would not result in an impact merely if it would not implement a particular program, policy, plan or ordinance. Rather, it is the intention of this threshold test to ensure that proposed development does not conflict with nor preclude the City from implementing adopted programs, plans, and policies.[6] Furthermore, under CEQA, a project is considered consistent with an applicable plan if it is consistent with the overall intent of the plan and would not preclude the attainment of its primary goals. A project does not need to be in perfect conformity with each and every policy. Finally, any inconsistency with an applicable policy, plan, or regulation is only a significant impact under CEQA if the policy, plan, or regulation was adopted for the purpose of avoiding or mitigating an environmental effect and if the inconsistency itself would result in a direct or indirect physical impact on the environment.

Per the TAG requirements, this evaluation was conducted by reviewing City documents such as the Los Angeles Municipal Code (LAMC), Los Angeles Mobility Plan 2035, Vision Zero plan, Citywide Design Guidelines, and the local community plan. **Attachment A** to this memorandum provides additional detail regarding the plans, programs, ordinances, and policies conflict review analysis which was conducted in accordance with the City's TAG and is summarized below.

The Project features and design support multimodal transportation options and would be consistent with policies, plans, and programs that support alternative transportation, such as those included in *Mobility Plan 2035*. The Project design includes features to minimize impacts to the public right-of-way and enhance the user experience by integrating multimodal transportation options. The Project proposes to add sidewalks on Slauson Avenue and Normandie Avenue, to provide direct access between bicycle parking facilities and Metro's planned ATC, and to plant street trees and improve street lighting around the building. The Project will provide short-term and long-term bicycle parking exceeding LAMC requirements.

The Project site would be served by a single driveway on Normandie Avenue at the north end of the parcel. Normandie Avenue is designated a Modified Avenue II. The Project would additionally provide access to an off-site parking facility located across the street on the southeast corner of the intersection of Slauson Avenue & Normandie Avenue. Access to the off-site parking facility is provided by two existing driveways each on both Slauson Avenue and Normandie Avenue. At this stage of Project design, site plans are conceptual only and no specific details are available on driveway or parking facility design or for the off-site parking facility, for example details on driveway width, driveway curb returns, or internal drive aisle widths. Final access and layout of all

[6] Los Angeles Department of Transportation, *Transportation Assessment Guidelines*, page 2-2 (July 2020).

Project parking, on-site or off-site, would be completed in consultation and cooperation with LADOT and subject to review and approval by that department.

The Project would be developed in an industrial area of South Los Angeles along a former railroad right-of-way which has most recently been used a construction staging ground, and at the intersection of two streets on the City's High-Injury Network. There are no existing sidewalks, curb ramps, or crosswalks along the north side of Slauson Avenue due its use a railroad facility, but access to the right-of-way is not fenced and pedestrians do use it as a pedestrian space despite the existing hazards. The proposed Project is a complementary use to the ATC being developed by Metro along the north side of Slauson Avenue in the railroad right-of-way. The ATC will provide a convenient, comfortable, and safe way for Project site visitors to access the site via non-motorized transportation modes, and the Project will provide a refuge for ATC users to stop, rest, hydrate, recreate, and meet with friends. The two projects in tandem will transform walkability and bikeability in the Project area. The Project would not substantially increase hazards, conflicts, or preclude City actions to fulfill or implement projects associated with these policies and will improve walkability on streets fronting the Project site.

Geometric Design Feature Review

This section discusses impacts regarding the potential increase of hazards due to a geometric design feature that generally relates to the geometric design of access points to and from the Project site and may include safety, operational, or capacity impacts. The Project is currently in the conceptual planning stage and final design documents are not available. The discussion below is based on the documents available today. The Project will be designed in accordance with relevant City standards and requirements as the planning progresses.

Primary pedestrian access to the Project would be provided at the ground level on Slauson Avenue and Normandie Avenue. Visitors and employees arriving to the Project site by bicycle would have the same access opportunities as pedestrians but would need to dismount and walk bicycles to parking within the building's interior. Pedestrian entrances would be separate from vehicular driveways and would provide access from the adjacent streets, parking facilities, and transit stops. Additionally, pedestrians and bicyclists would have direct access to the Project from Metro's planned ATC, which would run along the Project's south frontage on Slauson Avenue.

The Project's driveway would be designed to the City standards and would provide adequate sight distance, sidewalks, and pedestrian movement controls that meet the City's requirements to protect pedestrian safety. The proposed driveway would be located at the northern edge of the site, as far from north of Slauson Avenue as possible, and would intersect Normandie Avenue at a right angle. Street trees and other potential impediments to adequate driver and pedestrian visibility at this location are minimal.

The Project was analyzed with the following driveway:

- A two-way driveway on Normandie Avenue with full ingress and right-turn egress access. The driveway will be located at the north end of the project site, as far from the intersection with Slauson Avenue as possible.

Additionally, the Project would provide access to off-site parking at a lot directly across the street from the Project site at the southeast corner of the intersection of Slauson Avenue & Normandie Avenue. The off-site lot is the site of a now-disused restaurant and has two existing driveways on Slauson Avenue and two on Normandie Avenue. Access to the Slauson Avenue driveways would be restricted to full egress and right-turn egress only. The Normandie driveways would be limited to right-turn in and out access only.

While the driveway is located on a street on the City's High-Injury Network, the driveway would be designed to comply with LADOT standards. The driveways would not require the removal or relocation of existing passenger transit stops and would be designed and configured to avoid or minimize potential conflicts with transit services and pedestrian traffic. As a result, the Project would not substantially increase hazards or conflicts and would contribute to overall walkability through enhancements to the Project site. **Attachment A** contains more detailed responses to the TAG evaluation questions that support this conclusion.

Summary

The proposed Project seeks to build a 20,000 sf recreation and community center at 5820 South Normandie Avenue, at the intersection with Slauson Avenue. The Project would utilize land owned by Metro in exchange for developing a complementary use to Metro's ATC, currently under construction along the north side of Slauson Avenue.

- The Project would provide vehicular access via one driveway on Normandie Avenue. Off-site parking would be provided across the street from the Project, at a parcel on the southeast corner of the intersection of Slauson Avenue & Normandie Avenue. The off-site parking facility is served by two driveways each on Slauson Avenue and Normandie Avenue. Development of the Project, in conjunction with development of the ATC, would greatly enhance pedestrian and bicycle safety in the Project area. Access to the on-site Project driveway and to the two off-site driveways located on Slauson Avenue would be limited to full ingress, but right-turn out egress only. The off-site parking facility driveways on Normandie Avenue would be limited to right-turn in and out only.
- The Project is screened from VMT analysis as a local-serving retail land use. It's VMT impact is assumed to be less than significant.
- The Project is consistent with the SCAG 2016-2040 RTP/SCS. Given its consistency and its less-than-significant project-level impact, the Project's cumulative impact on VMT would not be significant.
- The Project would support multimodal transportation options and would be consistent

with policies, plans, and programs that support alternative transportation.

- The Project would not substantially increase hazards, conflicts, or preclude City actions to fulfill or implement projects associated with these policies and will improve walkability on streets fronting the Project site.

City of Los Angeles VMT Calculator Version 1.3

Summary

ATTACHMENT A

Detailed Responses in Support of Determining Plans, Programs, Ordinances, or Policies Applicability

Attachment A: Slauson Connect Recreation and Community Center Project

Detailed Responses in Support of Determining Plans, Programs, Ordinances, or Policies Applicability

Adapted from Attachment D: Plan Consistency Workshop in Transportation Analysis Guidelines, LADOT, July 2020

I. Screening Criteria for Policy Analysis

If the answer is "yes" to any of the following questions, further analysis is required to demonstrate that the project does not conflict with a plan, policy, or program.

Screening Criteria	**Answer**
Does the project require a discretionary action that requires the decision maker to find that the decision substantially conforms to the purpose, intent and provisions of the General Plan?	Yes
Is the project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety?	No
Is the project required to or proposing to make any voluntary modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?	Yes

II. Plan Consistency Analysis

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
A. MOBILITY Plan 2035 PROW Classification Standards for Dedications and Improvements			
A.1	Does the project include additions or new construction along a street designated as a Boulevard I, and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone?	MP 2.1, 2.3, 3.2, and Mobility Plan 2035 Street Designations and Standard Roadway Dimensions	The project site is located along Slauson Avenue for the full length of the block between Normandie Avenue and Budlong Avenue. Normandie Avenue and Slauson Avenue are designated as Modified Avenue II in the project study area. Budlong Avenue is designated as a Collector Street. The project parcel is designated as PF-1 (Public Facilities – less restrictive than R3).
A.2	If A.1 is yes, is the project required to make additional dedications or improvements to the Public Right of Way as demonstrated by the street designation?		No dedications would be required on an arterial street, but they would be on a Collector Street. Normandie Avenue is designated as a Modified Avenue II, meaning that the City has indicated that its current dimensions are appropriate despite not exactly aligning with the street standard for "unmodified" streets, and therefore widening the ROW is not required. Slauson Avenue is designated as a Modified Avenue II, meaning that the City has indicated that its current dimensions are appropriate despite not exactly aligning with the street standard for "unmodified" streets, and therefore widening the ROW is not required. On the Project's east side along Budlong Avenue, which is designated as a Collector Street, the Project is dedicating 3' to the public right-of-way as that roadway's dimensions are currently deficient.
A.3	If A.2 is yes, is the project making the dedications and improvements as necessary to meet the		N/A, see above. Dedications required only on a Collector Street (Budlong Avenue).

	designated dimensions of the fronting street (Boulevard I, and II, or Avenue I, II, or III)?		
A.4	If the answer to A.3. is NO, is the project applicant asking to waive from the dedication standards?		N/A.
B. Mobility Plan 2035 PROW Policy Alignment with Project-Initiated Changes			
B.1	Does the project physically modify the curb placement or turning radius and/or physically alter the sidewalk and parkways space that changes how people access a property?	MP 2.1, 2.3, 3.2, 2.10, and Street Designations and Standard Roadway Dimensions	The Project is located on a former railroad right-of-way. The Project site has most recently been used as a staging ground for construction of Metro's planned Active Transportation Corridor (ATC). There is currently no formal access to the public to the Project site though it is not protected by a fence. The proposed Project would result in the development of one two-way driveway on Normandie Avenue at the north side of the Project site with with access restricted to full ingress (right and left turns in to the Project site allowed) and right-turn out egress. The driveway would be designed to meet City standards. At the off-site parking facility located on the southeast corner of the intersection of Slauson Avenue & Normandie Avenue, there are two existing driveways each on both Slauson Avenue and Normandie Avenue. Access at the Slauson Avenue driveways would be limited to right-turns in and out, with left-turns prohibited. Access at the Normandie Avenue driveways would be the same as that at the primary project driveway: full ingress allowed, but egress limited to right-turn out. The project makes no changes such that the Project would be supportive of and/or would not preclude implementation of or conflict with *Mobility Plan 2035* policies such as: 2.1 Adaptive Reuse of Streets: Urban streets serve multiple purposes that not only include travel but also play a role in providing other roles such as landscaping and drainage. The Project proposes to add sidewalk and street trees and improve street and pedestrian lighting around the Project site. 2.3 Pedestrian Infrastructure: This policy recognizes walking as a component of every trip and ensures high quality pedestrian access is considered in all site planning and public right-of-way

			modifications to provide a safe and comfortable walking environment. The Project proposes to add sidewalks and street trees and improve street and pedestrian lighting around the Project site, and would provide direct access to the ATC. 3.2 People with Disabilities: When designing developments, it is important to accommodate the needs of all people with varying levels of mobility. The sidewalks around the perimeter of the Project site will be ADA-compliant. 2.10 Loading Areas: When designing developments, it is important to consider a loading area that minimally impacts other travelers such as people driving or walking. As a public facility, the Project does not require any commercial or residential loading areas. Loading activities will be done off-street within the Project site.
B.2	Does the project add new driveways along a street designated as an Avenue or a Boulevard that conflict with LADOT's Driveway Design Guidelines?	MP 2.10, PL.1, CDG 2, MPP 321	The Project would add one new two-way driveway on Normandie Avenue. The Manual of Policies and Procedures (MPP) Section 321 requires that driveways be placed on the non-arterial street when a project is located at the intersection of an arterial street and a non-arterial street and access is possible from the non-arterial street. Normandie Avenue and Slauson Avenue are both arterial streets (Modified Avenue II), Budlong Avenue is a Collector Street. It is unknown whether access is possible from Budlong Avenue. Access to the Project site from Slauson Avenue is not available due to the ATC planned on that frontage. One driveway is permitted per 200' of building frontage. The Project frontage along Normandie Avenue is 45'. Therefore, the number of driveways is consistent with MPP 321 guidelines. No two-way left-turn channelization is provided on Normandie Avenue adjacent to the Project site. MPP 321 requires driveways in these situations to be sited as far from the intersecting street as possible. The Project's only driveway is planned for the very north end of the project site, as far from Slauson Avenue as possible given the Project's narrow width. Additionally, driveway access is limited to full ingress, but right-turn out only. Therefore, the driveway location is consistent with MPP 321. At the off-site parking facility located on the southeast corner of the intersection of Slauson Avenue & Normandie Avenue, there are two existing driveways each on both Slauson Avenue and Normandie Avenue. Access at the Slauson Avenue driveways would be limited to right-turns in

			and out, with left-turns prohibited. Access at the Normandie Avenue driveways would be the same as that at the primary project driveway: full ingress allowed, but egress limited to right-turn out. The off-site parking location is currently fenced and access is limited; however, vehicles do still park there currently and the driveways remain in use. Therefore, the Project's use of these driveways does not represent a new driveway. At this stage of Project design, site plans are conceptual only and no specific details are available on driveway or parking facility design or for the off-site parking facility, for example details on driveway width, driveway curb returns, or internal drive aisle widths. It is anticipated that the Project driveways and parking facilities will be designed to meet all City standards and plans will be reviewed for consistency by all relevant City agencies. Therefore, it is concluded that the Project driveways and internal circulation design would be consistent with MPP 321.
B.2.1	Would the physical changes in the public right of way or new driveways that conflict with LADOT's Driveway Design Guidelines degrade the experience of vulnerable roadway users such as modify, remove, or otherwise negatively impact existing bicycle, transit, and/or pedestrian infrastructure?	Mobility Plan 2035: Transit Enhanced Network, Bicycle Enhanced Network, Bicycle Lane Network, Pedestrian Enhanced District, Neighborhood Enhanced Network, High Injury Network, TOC Guidelines	In the Project area, Normandie Avenue is designated a Pedestrian Enhanced District and is on the High-Injury Network. Slauson Avenue is designated as part of the Bicycle Enhanced Network (Bicycle Path), the Transit Enhanced Network (Comprehensive Transit Enhanced Street), and is also on the High-Injury Network (HIN). Budlong Avenue is on the Neighborhood Enhanced Network. No physical changes are proposed in the public right-of-way with the exception of the driveway on Normandie Avenue. The Project's driveway would not conflict with LADOT's Driveway Design Guidelines. The Project has proposed to provide access to off-site parking, to be located on a parcel located on the southeast corner of the intersection of Slauson Avenue & Normandie Avenue, across the street from the Project. This would require site visitors to cross the street after parking their vehicle in order to access the Project site. The existing environment today is not pedestrian-friendly and pedestrians currently use the railroad right-of-way as a sidewalk. The Project's proposed improvements, in conjunction with the development of the ATC, will transform pedestrian safety and comfort in the area, thereby greatly improving conditions compared to today. Project visitors utilizing the off-site parking facility will have access to the Project site via an existing continental crosswalk. Additional improvements, such as ADA-compliant curb ramps on the southeast corner, may be required by City agencies during the approval process. <u>Pedestrian Enhanced District:</u> Mobility Plan 2035 identifies Pedestrian Enhanced Districts (PED) where initial analysis suggests arterials can be improved and further analysis and prioritization will occur as funding and projects become available. Normandie Avenue is designated as a PED. The

			Project will install one new driveway on Normandie Avenue, consistent with LADOT's design guidelines. Driveway turn restrictions will limit potential conflict points between vehicles and pedestrians. The Project will also install a planted parkway and sidewalk along Normandie Avenue where today none exists, thereby improving the pedestrian environment. Neighborhood Enhanced Network: The Neighborhood Enhanced Network (NEN) is a selection of local streets to provide comfortable and safe routes for localized travel of slower-moving modes, such as walking or biking. The Project frontage along Budlong Avenue is part of the NEN. The Project would not conflict with, limit, or preclude the City's ability to implement programs and policies in furtherance of the NEN. Transit Network: This policy identifies specific streets as part of the Transit Enhanced Network (TEN) to receive improvements that enhance the performance and reliability of existing and future bus service. The Project frontage along Slauson Avenue is located on the TEN. The Project would not conflict with, limit, or preclude the City's ability to implement programs and policies in furtherance of the TEN. Bicycle Networks: This policy establishes a Bicycle Enhanced Network (BEN), which is comprised of protected bicycle lanes and bicycle paths, to provide bikeways for a variety of users. The Project frontage along Slauson Avenue is located on the TEN. The Project will be designed to provide direct access to the planned ATC envisioned for the north side of Slauson Avenue, and it will provide more bicycle parking than is required by City code. Additionally, the mix of uses envisioned for the Project will complement the ATC, providing a place for users to meet friends, recreate, drop off young children at childcare on the way to work, etc. Vision Zero: Normandie Avenue and Slauson Avenue are part of the Vision Zero High Injury Network. The Project would not conflict with, limit, or preclude the City's ability to implement programs and policies in furtherance of improving safety on the HIN. The Project's siting on the ATC increases the likelihood that visitors will arrive by non-motorized modes and possibly reduces the number of vehicles on the roadway.

B.2.2	Would the physical modifications or new driveways that conflict with LADOT's Driveway Design Guidelines preclude the City from advancing the safety of vulnerable roadway users?		The Project driveway would be consistent with LADOT's Driveway Design Guidelines. Implementation of the driveway would not preclude the City from advancing the safety of vulnerable roadway users.
C. Network Access			
C1.1	Does the project propose to vacate or otherwise restrict public access to a street, alley, or public stairway?	MP 3.9	No, the Project does not propose to vacate or restrict public access to a street, alley, or public stairway.
C.1.2	If the answer to C.1.1 is Yes, will the project provide or maintain public access to people walking and biking on the street, alley or stairway?		N/A.
C.2.1	Does the project create a cul-de-sac or is the project located adjacent to an existing cul-de-sac?	MP 3.10	No, the Project does not propose to create a cul-de-sac nor is it located adjacent to an existing cul-de-sac.
C.2.2	If yes, will the cul-de-sac maintain convenient and direct public access to people walking and biking to the adjoining street network?		N/A.

D. Parking Supply and Transportation Demand Management			
D.1	Would the project propose a supply of onsite parking that exceeds the baseline amount as required in the Los Angeles Municipal Code or a Specific plan, whichever requirement prevails?	MP 3.8, 4.8, 4.13	4.13 Parking and Land Use Management: This policy states that excessive parking can incentivize undesirable behavior or result in large areas of vacant land that make it harder to reach destinations without a vehicle. The basic code requirement for Project has been calculated by the project development team at 40 spaces. The Project intends to seek parking reductions due to its bus lines. The supply of on-site parking will be 14 spaces, including 3 electric vehicle parking spaces and 3 ADA spaces. The Project will redevelop the property on the southeast corner of Normandie Avenue & Slauson Avenue to provide an additional 26 parking spaces. Together this will be provide a total of 40 parking spaces to support the Project. The parking supply will equal 1 space per 500 square feet which is consistent with what is required for projects located in a State Enterprise Zone per LAMC Section 12.21A4(x)(3). This parking ratio is also what is required for commercial businesses and offices, including government offices. This supply will not exceed the baseline amount as required by the Los Angeles Municipal Code.
D.2	If the answer to D.1. is YES, would the project propose to actively manage the demand of parking by independently pricing the supply to all users (e.g. parking cash-out), or for residential properties, unbundle the supply from the lease or sale of residential units?		N/A.
D.3	Would the project provide the minimum on and off-site bicycle parking spaces as required by Section 12.21 A.16 of the LAMC?		3.8 Bicycle Parking: The Project is providing on-site bicycle parking consistent with the City's Bicycle Parking Ordinance. Bicycle parking requirements are not identified specifically for community and recreation centers. The most relevant comparative land uses, office and institutional uses, require one short-term bicycle parking space per 10,000 square feet and one long-term bicycle parking space per 5,000 square feet. Using this metric, the Project would be

			required to provide two short-term bicycle parking spaces and four long-term bicycle parking spaces. The Project plans to provide a total of 10 short-term bicycle parking spaces and four long-term bicycle parking spaces (enclosed lockers), exceeding the minimum requirement.
D.4	Does the Project include more than 25,000 square feet of gross floor area construction of new non-residential gross floor?		No. The Project proposes the construction a multi-purpose recreation and community center with 20,000 square feet.
D.5	If the answer to D.4. is YES, does the project comply with the City's TDM Ordinance in Section 12.26 J of the LAMC?		N/A.
E. Consistency with Regional Plans			
E.1	Does the Project or Plan apply one the City's efficiency-based impact thresholds (i.e. VMT per capita, VMT per employee, or VMT per service population) as discussed in Section 2.2.3 of the TAG?		The project is screened out of VMT analysis based on its size, per Section 2.2.2 of the TAG (retail < 50,000 square feet). Therefore, the project does not apply one of the City's efficiency-based impact threshold as discussed in Section 2.2.3.
E.2	E.2 If the Answer to E.1 is YES, does the Project or Plan result in a significant VMT impact?		N/A.
E.3	If the Answer to E.1 is NO, does the Project result in a net increase in VMT?		N/A.

E.4	If the Answer to E.2 or E.3 is YES, then further evaluation would be necessary to determine whether such a project or land use plan would be shown to be consistent with VMT and GHG reduction goals of the SCAG RTP/SCS		N/A.

Review of Consistency with Current South Los Angeles Community Plan

The South Los Angeles Community Plan was updated and adopted in 2017. The 2017 plan is currently in effect and forms the basis for this review of conflicts relating to the transportation system.

The South Los Angeles Community Plan (SLACP) is one of 35 community plans in the City of Los Angeles that establishes the policies and programs that inform the framework for local land use, circulation, and service systems within the selected community plan area. Per the City's new TAG, a review of the SLACP was conducted to evaluate whether the Project conflicts with or precludes the implementation of the community plan framework.

The SLACP contains transportation-related objectives, policies, and programs in Chapter III, Land Use and Urban Design, and in Chapter IV, Mobility. The following objectives, policies, and programs are relevant to the Project:

> Policy LU9.1 – Design for Pedestrians. Preserve, enhance, and expand existing pedestrian orientation along commercial streets through design standards such as maintaining a uniform street frontage and locating parking at the rear of lots.
>
> *The Project's only driveway would be located at the rear of the property and parking would be located at the ground level but hidden from view within the Project building.*
>
> Policy LU9.10 – Minimize Curb Cuts. Minimize curb cuts along boulevards and encourage vehicular access from alleys or side streets.
>
> *The Project would provide direct vehicular access via one driveway only, located on Normandie Avenue at the rear of the project site. The Project would provide access to an off-site parking facility located on the southeast corner of the intersection of Slauson Avenue & Normandie*

Avenue, which currently has four driveways total, two each on Slauson Avenue and Normandie Avenue. Final access and layout of all Project parking, on-site or off-site, would be completed in consultation and cooperation with LADOT and subject to review and approval by that department.

Policy LU13.7 – Daily Needs Within Walking Distance. Encourage walkability within Neighborhood Commercial areas by fostering a variety of uses that serve the daily needs of adjacent residential areas.

The Project aims to serve the immediate community by providing services that integrate it into the community fabric. Initial concepts for the Project building envision transparency between the interior commercial spaces and the sidewalk outside, and include windows on the Project's north elevation that visually connect the community activities conducted within the building with the residential neighborhoods the Project would serve. The Project would provide a wide range of critical services to the community, including career and social counseling, childcare, office space, community meeting space, recreational facilities, and flexible commercial spaces.

LU19.6 – First/Last Mile Improvements [in Transit-Oriented Districts]. Coordinate with the Mobility Hubs Program to plan, design, construct, operate, and maintain first/last mile improvements near existing Metro light rail stations, the Slauson Avenue ATC, the Silver Line Transitway, Bus Rapid Transit stations, and future Vermont Bus Rapid Transit Stations.

The Project, located at the convergence between the Slauson/Western Transit-Oriented District and the Slauson/Vermont Transit-Oriented District, would provide direct access to Metro's planned ATC, and would provide more bicycle parking than required by City code.

Policy LU19.9 – Sustainable Mobility Options [in Transit-Oriented Districts]. Encourage sustainable mobility options including transportation options for persons who do not have cars or want to use their cars less and promote the use of taxis, rental cars, shared cars, shared bicycles, van pools, shuttles, secure bicycle parking, consolidated pick-up and drop-off areas for Transportation Network Companies (TNCs), and other short trip and first/last mile connections to transit. Encourage the location of these services and bus layovers near Metro light rail stations and major transit nodes, especially the Slauson Avenue ATC, the Silver Line Transitway, Bus Rapid Transit stations, and future Vermont Bus Rapid Transit stations.

The Project would provide direct access to Metro's planned ATC, and would provide more bicycle parking than required by City code.

Policy M2.1 – Streetscapes. Encourage and support streetscape improvements in neighborhood district commercial areas and transit-oriented development areas in order to foster the appeal of the street as a gathering place, including street furniture, well-maintained street trees, publicly accessible courtyards, wide sidewalks, bicycle access and appropriate traffic control measures to reduce travel speeds.

The Project would install a new sidewalk and parkway on Normandie Avenue, and a new sidewalk on Slauson Avenue adjacent to Metro's planned ATC. Additionally, the Project would provide direct access to Metro's planned ATC, would provide pedestrian access from Slauson Avenue into the Project's parking facility, allowing bicyclists using the ATC and visiting the Project to dismount on the ATC and walk their bicycle directly to the Project-provided bicycle parking without needing to cross a vehicular travelway and eliminating the possibility for conflicts with vehicles. The Project would additionally provide more bicycle parking than required by City code.

Policy M2.2 – Pedestrian Access. Encourage walking by orienting building entrances to face the streets and sidewalks when designing access to new developments and buildings.

The Project would provide multiple access points for pedestrians and bicyclists along its frontages along Slauson Boulevard and Normandie Avenue,, and would provide direct access to Metro's planned ATC.

Policy M2.3 – Priority Pedestrian Routes. Streets within commercial, transit-oriented, mixed-use and employment districts should have pedestrian priority, establishing pedestrian needs as paramount to vehicular circulation needs and encouraging investment in pedestrian improvements and programs for identified segments.

The Project does not conflict with or prevent the City from pursuing this program. The Project would provide direct access to Metro's planned ATC.

Policy M2.4 – Pedestrian Amenities. Maintain sidewalks, streets and rights-of-way in good condition, free of obstructions, and with adequate lighting, trees and parkways. Streets should accommodate pedestrians comfortably through adequate sidewalks, parkway landscaping that provides shade, and street lighting that provides for safety during the night.

The Project does not conflict with or prevent the City from pursuing this program. The Project would install new sidewalks on Normandie Avenue and Slauson Avenue, in addition to the planned ATC.

Policy M2.5 – Minimize Pedestrian Conflicts. Minimize conflicts between buses, cars, and pedestrians by designing and constructing sidewalks and crosswalks that make pedestrians feel safe, as well as by creating well-marked crossings at intersections and select mid-block locations, preferably within Transit-Oriented Areas and Districts.

The Project does not conflict with or prevent the City from pursuing this program. Additionally, the Project would install sidewalks on Normandie Avenue and Slauson Avenue where today there are none. The Slauson Avenue frontage sidewalk is in addition to the ATC planned for the north side of Slauson Avenue, which will also provide a pedestrian facility.

Policy M4.1 – Priority Bikeways. Support the citywide bikeway network to establish bicycle circulation as paramount to vehicular circulation needs on key streets, and to encourage investment in bicycle improvements and programs on these identified streets.

The Project does not conflict with or prevent the City from pursuing this program.

Policy M4.2 – Bikeway Connections. Provide bicycle access for open space areas, commercial and mixed-use boulevards, transit-oriented community centers and neighborhood districts in order to allow easy connections between residential neighborhoods and employment centers, as well as important non-work destinations.

The Project does not conflict with or prevent the City from pursuing this program. Additionally, the Project will provide direct access to the ATC planned for the north side of Slauson Avenue.

Policy M4.3 – Bicycle Amenities. Incorporate bicycle amenities (such as parking, lockers, changing rooms and showers) in public facilities, parks, commercial and multi-family residential developments, employment and transit centers, as well as park-and-ride facilities.

The Project proposed to provide more bicycle parking than is required by City code, including additional secure bicycle lockers.

Policy M6.2 – Pedestrian Amenities and Access to Transit. Improve pedestrian amenities and urban design along streets served by transit to create an easy and convenient user experience for people walking or bicycling by providing people-oriented built environment features such as bus bays or turnouts, street signage, striping, colored pavement, shade trees, countdown crosswalk signals, bus shelters, and bicycle racks or lockers.

The Project does not conflict with or prevent the City from pursuing this program. The Project would install new sidewalks on Normandie Avenue and Slauson Avenue, and provide pedestrian access to transit stops adjacent to the Project site.

Policy M11.3 - Priority Parking for Shared, Electric and Alternative Fuel Vehicles. Encourage new commercial and retail developments to provide prioritized parking for shared vehicles, electric vehicles and vehicles using alternative fuels.

The Project would provide three prioritized EV parking spaces.

Policy M11.4 – Connections for Electric Vehicles. Encourage new construction to include vehicle access to properly wired outdoor receptacles to accommodate zero emission vehicles (ZEVs) and plug-in electric hybrids (PHEV).

The Project would provide three EV parking spaces on-site and six EV parking spaces off-site, for a total of nine EV parking spaces..

Priority Streets. The Mobility Plan introduces the concept of prioritized improvements on streets that are part of the Plan's Enhanced Network. The Mobility Plan allows communities to further classify streets at the local level by priority mode or modes of travel, termed Priority Streets. Priority Streets are organized by walking, bicycling, transit, or motor vehicle priority. Slauson Avenue is identified as a priority street for bicycle and motorized vehicle travel.

The Project does not conflict with or prevent the City from pursuing enhancements on Slauson Avenue.

Detailed Responses for 2.4 Substantially Increasing Hazards Due to A Geometric Design Feature or Incompatible Use

Adapted from Section 2.4 in Transportation Analysis Guidelines, LADOT, July 2020

Impacts regarding the potential increase of hazards due to a geometric design feature generally relate to the design of access points to and from the project site, and may include safety, operational, or capacity impacts. Impacts can be related to vehicle/vehicle, vehicle/bicycle, or vehicle/pedestrian conflicts as well as to operational delays caused by vehicles slowing and/or queuing to access a project site. These conflicts may be created by the driveway configuration or through the placement of project driveway(s) in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to busy or congested intersections. These impacts are typically evaluated for permanent conditions after project completion but can also be evaluated for temporary conditions during project construction. If the project requires a discretionary action, and the answer is "yes" to either of the following questions, further analysis will be required to assess whether the project would result in impacts due to geometric design hazards or incompatible uses:

Screening Criteria

- Is the project proposing new driveways, or introducing new vehicle access to the property from the public right-of-way?
    - Yes. The Project site is currently vacant and has no existing driveways. The Project has proposed to provide one two-way driveway on the north end of the Project site along Normandie Avenue. The Project has additionally proposed to provide off-site parking access, to be located at the southeast corner of the intersection of Slauson Avenue & Normandie Avenue. The off-site parking location is currently developed with a disused restaurant and is served by four existing driveways, two each on Slauson Avenue and Normandie Avenue. The driveways are still active as the site is currently used for vehicle parking.

- Is the project proposing to, or required to make any voluntary or required, modifications to the public right-of-way (i.e., street dedications, reconfigurations of curb line, etc.)?

    - Yes, the Project is proposing to dedicate 3' along Budlong Avenue given existing right-of-way deficiencies on that street. Budlong Avenue is designated as a collector street.

Assessing Project Impacts

Project access points, internal circulation, and parking access were reviewed to assess vehicle, bicycle, and pedestrian safety impacts from an operational and safety perspective (e.g. turning radii, driveway queuing, and line of sight for turns into and out of project driveway[s]) through the lens of Threshold T-3:

Threshold T-3: Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Operational and safety issues related to the potential for vehicle/pedestrian and vehicle/bicycle conflicts and the severity of consequences that could result were considered for locations where the project driveway would cross pedestrian facilities or bicycle facilities (bike lanes or bike paths). Preliminary project access plans were reviewed through the lens of commonly accepted traffic engineering design standards (e.g. Section 321 of LADOT's Manual of Policies and Procedures, which provides guidance on driveway design) to ascertain whether any deficiencies are apparent in the site access plans which would be considered significant. The determination of significance considered the following factors:

- The relative amount of pedestrian activity at project access points.
    - The Project site is located in a primarily commercial and industrial area with some residential development on Normandie north of the Project site. Due to the COVID-19 pandemic, new vehicle and pedestrian counts were not collected as part of this study. The most recent traffic counts available for this location were collected in March 2019, prior to the travel and behavior changes resulting from the pandemic. Those counts showed low pedestrian activity at the intersection of Slauson Avenue & Normandie Avenue, with 87 pedestrians observed in the 3-hour AM peak period and 72 pedestrians observed in the 3-hour PM peak period. The Project will contribute to improving walkability with enhancements to the Project site, such as adding sidewalks on Normandie Avenue and Slauson Avenue.
- Design features/physical configurations that affect the visibility of pedestrians and bicyclists to drivers entering and exiting the site, and the visibility of cars to pedestrians and bicyclists.
    - Pedestrian access to the Project site will be located on Slauson Avenue and Normandie Avenue. Visitors and employees arriving to the Project site by bicycle would have the same access opportunities as pedestrians and would be able to utilize on-site bicycle parking facilities. The Project's access locations would be designed to City standards and would provide adequate sight distance, sidewalks, and pedestrian movement controls that meet the City's requirements to protect pedestrian safety. The one planned driveway will intersect Normandie Avenue at a right angle. Streets would have trees, and other potential impediments to adequate driver and pedestrian visibility would be minimal. Pedestrian entrances separated from the vehicular driveway would provide access from the adjacent streets, parking facilities, and transit stops.
- The type of bicycle facilities the project driveway(s) crosses and the relative level of utilization.
    - There are no existing or planned bicycle facilities along Normandie Avenue near the Project site.

- The physical conditions of the site and surrounding area, such as curves, slopes, walks, landscaping or other barriers, that could result in vehicle/pedestrian, vehicle/bicycle, or vehicle/vehicle impacts.
    - The streets surrounding the Project site are mostly flat and do not curve. The driveway along Normandie Avenue would be designed to meet City standards. Because the Project parking facility will be at ground level, the driveway will meet the sidewalk and roadway at grade and will not be sloped. The Project could implement blind spot mirrors to improve driver visibility and warning sounds/lights to alert pedestrians of approaching vehicles. The Project would locate the driveway at a right angle to Normandie Avenue to avoid visibility challenges once vehicles have exited the driveways.
- The project location, or project-related changes to the public right-of-way, relative to proximity to the High Injury Network or a Safe Routes to School program area.
    - The proposed Project is located at the intersection of two streets on the HIN, Normandie Avenue and Slauson Avenue. The Project is not located in a Safe Routes to School program area. However, the Project will also be designed to complement and interface with Metro's planned ATC, will provide direct access for bicyclists exiting the ATC to bicycle parking in the interior of the parking garage, will provide fewer vehicle parking spaces and more bicycle parking spaces than required by code, and will provide only one two-way driveway with turn restrictions to reduce possible conflict points.
- Any other conditions, including the approximate location of incompatible uses that would substantially increase a transportation hazard.
    - The Project is located on a now-disused former rail right-of-way. The Project site has most recently been used as a staging ground for construction of Metro's planned ATC. Development of the Project would provide active community uses, would complement the ATC by providing a supportive facility with recreation and meeting spaces, bathrooms, and bicycle parking. The Project would be designed to interface with the ATC and would provide direct access to bicyclists and pedestrians, including direct access via ground-floor pedestrian access to the bicycle parking located in the interior of the site. The location of the Project's sole driveway would not substantially increase transportation hazards.

Cumulative Impacts

The nearest related project to the Project site is a proposed gas station improvement project located at an existing 76 gas station at 5816 Western Avenue, approximately one half-mile west of the Project site. The project proposes to add additional pumps and expand the convenience store currently located there. The existing 76 gas station has driveways on both Western Avenue and Slauson Avenue. It is unknown whether any changes to the driveways or access scheme are proposed, but it should be assumed that both driveways will remain operational in the future. No cumulative impacts are anticipated as a result of the development of both projects. The gas station project will likely result in few new roadway

trips as most gas station visits are made on the way to somewhere else, rather than serving as a destination in and of itself. Additionally, the two projects do not share driveway frontages, as the proposed Project examined in this study would provide vehicular access on Normandie Avenue only. Other related projects located farther from the Project site would not share adjacent street frontages with the Project site.

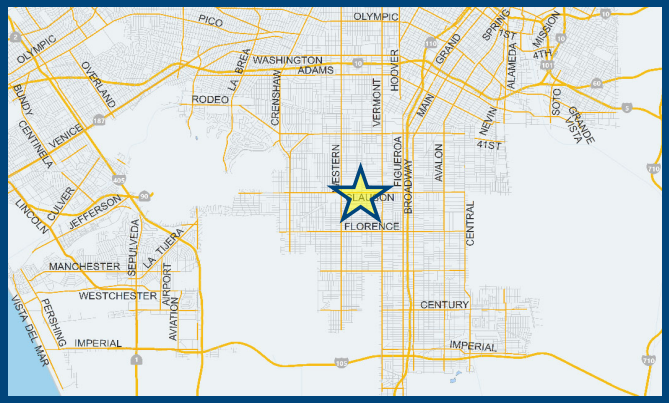
Summary

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3



Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Slauson Connect Recreation Center

Scenario:

Address: 5820 S NORMANDIE AVE, 90044

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Industrial | Warehousing/Self-Storage		ksf

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Retail | Health Club	20	ksf
Retail | Health Club	20	ksf

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
0 Daily Vehicle Trips	571 Daily Vehicle Trips
0 Daily VMT	3,835 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	571 Net Daily Trips
The net increase in daily VMT ≤ 0	3,835 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	20.000 ksf

The proposed project is not required to perform VMT analysis.

Chapter 1
Introduction

This Air Quality and Greenhouse Gas Technical Report is provided to support the City of Los Angeles (City) environmental review process and provide information regarding potential effects of air quality and greenhouse gas (GHG) emissions associated with the proposed Slauson Connect Recreation Center Project (project) located in the South Los Angeles Community Plan area within the City. The analysis provided in this report evaluates the potential for short- and long-term air quality and GHG impacts associated with construction and operation of the project. The analysis includes a description of the environmental setting for the project, including existing air quality and GHG conditions, as well as applicable laws and regulations, and documents the assumptions, methodologies, and findings used to evaluate the project's air quality and GHG impacts.

1.1 Project Description Summary

The project consists of the development of a three-story, 20,000 square foot (sf) multi-use facility focused on recreation and community uses on an approximately 2.3-acre site located at 5820 Normandie Avenue in the City. The facility program will consist of a childcare facility, career and social counseling center, multi-purpose recreation rooms, office space, community room, facility support space, rooftop meeting space, and green roofs. The project will include sustainability measures in its design to be certified as Leadership in Energy and Environmental Design (LEED) Silver. As part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kilowatts [kW]), stormwater capture and reuse systems, high speed electric vehicle (EV) chargers, and vertical gardens. The project facility will be outfitted with the latest technology to help reduce the transmission of airborne viruses to ensure the safety of patrons. Equipment systems and design criteria such as, but not limited to, on demand air purge systems, ultraviolet (UV) filtration of circulated air, social distanced waiting areas, and body temperature checkpoints will be incorporated into the final design. An outdoor park area for passive and educational recreation will also be located on the south side of the project site fronting Slauson Avenue beginning at Budlong Avenue. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the Metropolitan Transportation Authority (MTA) and will seek parking reductions due to its close proximity to MTA train and bus lines, as well as offsite parking lots for patrons, which can be accessed by shuttle. On-site parking will be provided to accommodate up to four EV spaces, two Americans with Disabilities Act spaces, and 14 compact parking spaces for a total of 20 parking spaces (Pers. comm. Abdallah 2021). Furthermore, 10 standard and four long-term (enclosed lockers) bike parking will also be provided by the proposed project.

The project site is rectangular in shape, with a width of approximately 45 feet and length of approximately 1,233 feet, and extends from the northeast corner of Slauson Avenue and Normandie Avenue to the northwest corner of Slauson Avenue and Budlong Avenue. The project site is bounded by Slauson Avenue to the south, Normandie Avenue to the west, Budlong Avenue to the east, and existing industrial developments to the north. The project site has most recently been used as a dirt storage site for the construction of MTA's Crenshaw light rail line. All storage materials will be

cleared at the project site prior to project construction. Additionally, due to previous railway usage on the site, MTA has agreed to remediate or replace soil within a buffer area along the tracks to an "open space" standard under the voluntary clean-up agreement with the Department of Toxic Substances Control prior to the start of project construction.

Construction of the proposed project is anticipated to occur over an 11-month period from April 2022 to March 2023. The proposed multi-use facility will be constructed with the use of pre-approved modular shipping container building manufacturers. The design concept will be based on utilizing 8 feet by 40 feet modular containers, which will serve to reduce building costs and expedite the construction schedule. It is anticipated that the amount of soil that would be removed from the site during construction would be over 20,000 cubic yards.

1.2 Nearby Land Uses and Sensitive Receptors

Sensitive receptors are defined as locations where pollutant-sensitive members of the population may reside or where the presence of air pollutant emissions could adversely affect use of the land. Sensitive members of the population include those who may be more negatively affected by poor air quality than other members of the population, such as children, the elderly, or the infirm. In general, residential areas, hospitals, daycare facilities, elder-care facilities, elementary schools, and parks typically contain a high concentration of these sensitive population groups (CARB 2005). The project site is located in an urbanized area surrounded by a mix of land uses. Existing sensitive receptors include single- and multi-family residential uses that surround the project site within 500 feet.

Chapter 2
Air Quality

2.1 Existing Setting

2.1.1 Regional Climate and Meteorology

The project site is located within the South Coast Air Basin (Basin), an area covering approximately 6,745 square miles and bounded by the Pacific Ocean to the west and south and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the San Gorgonio Pass area in Riverside County. The terrain and geographical location determine the distinctive climate of the Basin, which is a coastal plain with connecting broad valleys and low hills.

The Southern California region, which includes the Basin, lies in the semi-permanent high-pressure zone of the eastern Pacific. As a result, the climate is mild and tempered by cool sea breezes. The usually mild climatological pattern is interrupted infrequently by periods of extremely hot weather, winter storms, or Santa Ana winds. The extent and severity of the air pollution problem in the Basin is a function of the area's natural physical characteristics (weather and topography) as well as human-made influences (development patterns and lifestyle). Factors such as wind, sunlight, temperature, humidity, rainfall, and topography all affect the accumulation and dispersion of pollutants throughout the Basin, making it an area of high pollution potential.

The greatest air pollution impacts in the Basin occur from June through September. These are generally attributed to the large amount of pollutant emissions, light winds, and shallow vertical atmospheric mixing. This condition frequently reduces pollutant dispersion, thereby causing elevated air pollution levels. Pollutant concentrations in the Basin vary with location, season, and time of day. Ozone concentrations, for example, tend to be lower along the coast, higher in the near inland valleys, and lower in the far inland areas of the Basin and adjacent desert.

The active weather station closest to the project site is a Western Regional Climate Center (WRCC) monitoring station at the University of Southern California (USC) campus (Los Angeles Downtown USC Campus Station [COOP ID 045115]), which is approximately 2.4 miles north of the project site. Given the station's proximity to the project site, historic climatic conditions at the Los Angeles Downtown USC Campus Monitoring Station are assumed to be representative of prevailing climatic conditions. According to climate data recorded from 1877 to 2016 at this station, the average annual maximum temperature in the area is approximately 74 degrees Fahrenheit (°F), and the average annual minimum temperature is approximately 56°F. The average precipitation in the area is approximately 15 inches annually, occurring primarily from December through March (WRCC 2021).

2.1.2 Criteria Air Pollutants

For the protection of public health and welfare, the Federal Clean Air Act (FCAA) requires that the United States Environmental Protection Agency (USEPA) establish National Ambient Air Quality Standards (NAAQS) for various pollutants. These pollutants are referred to as "criteria" pollutants. Similarly, the California Clean Air Act (CCAA) requires the California Air Resources Board (CARB) to set standards and designate areas as either attainment or nonattainment based on whether the California Ambient Air Quality Standards (CAAQS) have been achieved. As all criteria pollutants can have human health effects at certain concentrations, NAAQS and CAAQS define the maximum amount of an air pollutant that can be present in ambient air without harming public health. An ambient air quality standard is generally specified as a concentration averaged over a specific time period, such as one hour, eight hours, 24 hours, or 1 year. The different averaging times and concentrations are meant to protect against different exposure effects. Standards established for the protection of human health are referred to as primary standards; whereas standards established for the prevention of environmental and property damage are called secondary standards. The FCAA allows states to adopt additional or more health-protective standards. The air quality regulatory framework and ambient air quality standards are discussed in greater detail later in this report.

Air quality standards have been established for the following six criteria pollutants: ozone (O_3), lead (Pb), carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and particulate matter (PM), which consists of PM less than or equal to 10 microns in diameter (PM_{10}) and PM less than or equal to 2.5 microns in diameter ($PM_{2.5}$) (USEPA 2021a). Criteria air pollutants are also categorized as primary and secondary pollutants. In general, primary pollutants are directly emitted into the atmosphere, and secondary pollutants are formed by chemical reactions in the atmosphere. Of the six criteria pollutants, CO, SO_2, PM_{10}, and $PM_{2.5}$ are primary pollutants, whereas O_3 and NO_2 are secondary pollutants. The following provides a summary discussion of the primary and secondary criteria air pollutants of primary concern.

2.1.3 Ozone (O_3)

O_3, which is the main ingredient in urban smog, is not emitted directly into the air, but is created by chemical reactions between hydrocarbons (HC) and nitrogen oxides (NO_X) (both by-products of the internal combustion engine) in the presence of sunlight. Reactive organic gasses (ROG) are defined by CARB and include all HC except those exempted by CARB that contribute to smog formation, whereas volatile organic compounds (VOCs) are defined by USEPA and include all hydrocarbons except those exempted by USEPA. Generally speaking, ROGs and VOCs are similar but not identical, and their terms are used interchangeably. For purposes of this analysis, the term ROG is used. There are no separate ambient air quality standards for ROGs. Carcinogenic forms of ROG are toxic air contaminants (TACs), which are described below. An example is benzene.

ROG are compounds made up primarily of hydrogen and carbon atoms. Internal combustion associated with motor vehicle usage is the major source of hydrocarbons. Other sources of ROG are emissions associated with the use of paints and solvents, the application of asphalt paving, and the use of household consumer products such as aerosols.

The two major forms of NO_X are nitric oxide (NO) and NO_2. NO is a colorless, odorless gas formed from atmospheric nitrogen and oxygen when combustion takes place under high temperature and/or high

pressure. NO_2 is a reddish-brown irritating gas formed by the combination of NO and oxygen. In addition to serving as an integral participant in O_3 formation, NO_X also directly acts as an acute respiratory irritant and increases susceptibility to respiratory pathogens.

O_3 poses a higher risk to those who already suffer from respiratory diseases (e.g., asthma), children, older adults, and people who are active outdoors. Exposure to O_3 at certain concentrations can make breathing more difficult, cause shortness of breath and coughing, inflame and damage the airways, aggregate lung diseases, increase the frequency of asthma attacks, and cause chronic obstructive pulmonary disease. Studies show associations between short-term O_3 exposure and non-accidental mortality, including deaths from respiratory issues. Studies also suggest long-term exposure to O_3 may increase the risk of respiratory-related deaths (USEPA 2021b). The concentration of O_3 at which health effects are observed depends on an individual's sensitivity, level of exertion (i.e., breathing rate), and duration of exposure. Studies show large individual differences in the intensity of symptomatic responses, with one study finding no symptoms to the least responsive individual after a 2-hour exposure to 400 parts per billion of ozone and a 50 percent decrement in forced airway volume in the most responsive individual. Although the results vary, evidence suggest that sensitive populations (e.g., asthmatics) may be affected on days when the 8-hour maximum O_3 concentration reaches 80 parts per billion (USEPA 2021c).

In addition to human health effect, ozone has been tied to crop damage, typically in the form of stunted growth, leaf discoloration, cell damage, and premature death. Ozone can also act as a corrosive and oxidant, resulting in property damage such as the degradation of rubber products and other materials.

2.1.4 Nitrogen Dioxide (NO_2)

NO_2 is a reddish-brown gas with a bleach-like odor. As discussed previously, both NO and NO_2 are the two major forms of NO_X. Per the South Coast Air Quality Management District (SCAQMD) (2008), the vast majority (95 percent) of NO_X emissions is in the form of NO. No adverse health effects are associated with NO. However, breathing air with a high concentration of NO_2 can irritate airways in the human respiratory system, leading to increased asthma symptoms, hospital admissions, and visits to the emergency room (USEPA 2021d). NO is converted to NO_2 through reactions with ozone as well as through photochemical reactions with hydrocarbons in the lower atmosphere. These reactions are a function of downwind distance, and SCAQMD assumes 100 percent conversion of NO to NO_2 at 500 meters from the emission source. Therefore, whereas NO_X is a regional pollutant because it contributes to ozone formation, emissions of NO_X, specifically due to the localized conversion of NO_X to NO_2, can have localized effects.

In healthy people, increase in resistance to air flow and airway contraction is observed after short-term exposure to NO_2. Larger decreases in lung functions are observed in individuals with asthma and/or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups (SCAQMD 2005).

2.1.5 Carbon Monoxide (CO)

CO is a colorless, odorless, toxic gas produced by incomplete combustion of carbon substances, such as gasoline or diesel fuel. Inhaled CO has no direct toxic effect on the lungs, but exerts its effect on

tissues by interfering with oxygen transport by competing with oxygen to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for oxygen supply can be adversely affected by exposure to CO. Individuals most at risk include those with diseases involving heart and blood vessels, fetuses (unborn babies), and people with chronic hypoxemia (oxygen deficiency) as seen in high altitudes. Exposure to CO at high concentrations can also cause fatigue, headaches, confusion, dizziness, and chest pain (CARB 2021b).

2.1.6 Particulate Matter (PM)

PM consists of finely divided solids or liquids such as soot, dust, aerosols, fumes, and mists. Two forms of fine particulates are now recognized—PM_{10} and $PM_{2.5.}$ Particulate discharge into the atmosphere results primarily from industrial, agricultural, construction, and transportation activities. However, wind on arid landscapes also contributes substantially to local particulate loading. PM is considered both a local and a regional pollutant.

Particulate pollution can be transported over long distances and may adversely affect the human, especially for people who are naturally sensitive or susceptible to breathing problems. Numerous studies have linked PM exposure to premature death in people with preexisting heart or lung disease. Other symptoms of exposure may include nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms. Depending on its composition, both PM_{10} and $PM_{2.5}$ can also affect water quality and acidity, deplete soil nutrients, damage sensitive forests and crops, affect ecosystem diversity, and contribute to acid rain (USEPA 2021e).

2.1.7 Sulfur Dioxide (SO_2)

SO_2 is a colorless, irritating gas with a “rotten egg” smell primarily formed from the combustion of fossil fuels containing sulfur. SO_2 is considered a local pollutant because it tends to accumulate in the air locally. High concentrations of SO_2 can result in temporary breathing impairment for asthmatic children and adults who are active outdoors. Short-term exposures of asthmatic individuals to elevated SO_2 levels during moderate activity may result in breathing difficulties that can be accompanied by symptoms such as wheezing, chest tightness, or shortness of breath. Other effects that have been associated with longer-term exposures to high concentrations of SO_2, in conjunction with high levels of PM, include aggravation of existing cardiovascular disease, respiratory illness, and alterations in the lungs’ defenses. SO_2 also is a major precursor to $PM_{2.5}$, which is a significant health concern and a main contributor to poor visibility (see also the discussion of health effects of particulate matter).

2.1.8 Lead (Pb)

Pb in the atmosphere is present as a mixture of a number of lead compounds. Leaded gasoline and lead smelters have been the main sources of lead emitted into the air. Due to the phasing out of leaded gasoline, there was a dramatic reduction in atmospheric Pb over the past three decades. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. Fetuses, infants, and children are more sensitive than others to the

adverse effects of Pb exposure. In adults, increased Pb levels are associated with increased blood pressure. Pb poisoning can cause anemia, lethargy, seizures, and death. There is no evidence to suggest that there are direct effects of Pb on the respiratory system.

2.1.9 Toxic Air Contaminants (TAC)

TACs are generally defined as those air pollutants that may increase a person's risk of developing cancer and/or other serious health effects; however, the emission of a toxic chemical does not automatically create a health hazard. Although NAAQS and CAAQS have been established for criteria pollutants, no ambient standards exist for TACs. Many pollutants are identified as TACs because of their potential to increase the risk of developing cancer or because of their acute or chronic health risks. For TACs that are known or suspected carcinogens, CARB has consistently found that there are no levels or thresholds below which exposure is risk-free. Individual TACs vary greatly in the risks they present. At a given level of exposure, one TAC may pose a hazard that is many times greater than another. TACs are identified and their toxicity is studied by the California Office of Environmental Health Hazard Assessment (OEHHA).

Air toxics are generated by many sources, including: stationary sources, such as dry cleaners, gas stations, auto body shops, and combustion sources; mobile sources, such as diesel trucks, ships, and trains; and area sources, such as farms, landfills, and construction sites. Adverse health effects of TACs can be carcinogenic (cancer-causing), short-term (acute) non-carcinogenic, and long-term (chronic) non-carcinogenic. Direct exposure to these pollutants has been shown to cause cancer, birth defects, damage to the brain and nervous system, and respiratory disorders. The principal TAC associated with the proposed project is diesel particulate matter (DPM).

DPM differs from other air toxics in that it is a complex mixture of hundreds of substances rather than a single substance. DPM is typically composed of carbon particles ("soot," also called black carbon) and numerous organic compounds, including over 40 known cancer-causing organic substances such as polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. As more than 90 percent of DPM is less than 1 micrometer (µm) in diameter (about 1/70th the diameter of a human hair), the majority of DPM is small enough to be inhaled into the lungs. Although particles the size of DPM can deposit throughout the lung, the largest fraction deposits in the deepest regions of the lungs where the lung is most susceptible to injury. Health effects associated with exposure to DPM include premature death, hospitalizations, and emergency department visits for exacerbated chronic heart and lung disease, including asthma, increased respiratory symptoms, and decreased lung function in children (CARB 2021c).

2.1.10 Ambient Air Quality

CARB collects ambient air quality data from a network of air monitoring stations throughout the state. The purpose of the monitoring stations is to measure ambient concentrations of pollutants and determine whether the ambient air quality meets NAAQS and CAAQS. The closest monitoring station is the Los Angeles-North Main Street station (CARB 70087), which is approximately 6 miles northeast of the project site. This station currently monitors ambient concentrations of ozone, NO_2, CO, SO_2, Pb, PM_{10}, and $PM_{2.5}$.

Table 2.1-1 summarizes the concentrations of these pollutants, applicable regulatory standards, and the number of days per year applicable standards were exceeded for the last 3 years from which complete data are available (2017–2019). As discussed above, CAAQS and NAAQS define clean air and represent the maximum amount of pollution that can be present in outdoor air without any harmful effects on people and the environment. The nearby monitoring station has experienced violations of both the 1-hour and 8-hour ozone and 24-hour PM_{10} CAAQS over the period of record. Additionally, violations of the 8-hour ozone and 24-hour $PM_{2.5}$ NAAQS also occurred during this period. Existing violations of these CAAQS and NAAQS indicate that certain individuals exposed to these pollutants may experience certain health effects, including increased incidence of cardiovascular and respiratory ailments.

Table 2.1-1. Summary of Ambient Air Quality Monitoring Data

Pollutant Standards	2017	2018	2019
1-hour Ozone (O3)			
Maximum Concentration (ppm)	0.116	0.098	0.093
Number of Days Standard Exceeded			
CAAQS 1-hour standard (0.09 ppm)	6	2	0
8-Hour Ozone (O_3)			
State Maximum Concentration (ppm)	0.086	0.074	0.080
National Maximum Concentration (ppm)	0.086	0.073	0.080
National Fourth-highest Concentration (ppm)	0.080	0.071	0.065
Number of Days Standard Exceeded			
CAAQS 8-hour standard (0.070 ppm)	16	4	2
NAAQS 8-hour standard (0.070 ppm)	14	4	2
Carbon Monoxide (CO)			
Maximum Concentration 1-hour Period (ppm)	2.0	2.0	2.0
Maximum Concentration 8-hour Period (ppm)	1.8	1.7	1.6
Number of Days Standard Exceeded			
NAAQS 8-hour standard (9 ppm)	0	0	0
CAAQS 8-hour standard (9.0 ppm)	0	0	0
NAAQS 1-hour standard (35 ppm)	0	0	0
CAAQS 1-hour standard (20 ppm)	0	0	0
Nitrogen Dioxide (NO_2)			
Maximum 1-hour Concentration (ppm)	0.081	0.070	0.069
Annual Average Concentration (ppm)	0.020	0.018	0.018
Number of Days Standard Exceeded			
CAAQS 1-hour standard (0.180 ppm)	0	0	0
NAAQS 1-hour standard (0.100 ppm)	0	0	0
Sulfur Dioxide (SO_2)			
Maximum 1-hour Concentration (ppm)	0.006	0.018	0.010
Maximum 24-hour Concentration (ppm)	0.002	0.001	0.001
Number of Days Standard Exceeded			
CAAQS 1-hour standard (0.25 ppm)	0	0	0
NAAQS 1-hour standard (0.075 ppm)	0	0	0
CAAQS 24-hour standard (0.04 ppm)	0	0	0

Pollutant Standards	2017	2018	2019
Suspended Particulates (PM_{10})			
State Maximum 24-hour Concentration (μg/m³)	96.2	81.2	93.9
National Maximum 24-hour Concentration (μg/m³)	64.6	68.2	62.4
State Annual Average Concentration (CAAQS=20 μg/m³)	*	34.0	*
Number of Days Standard Exceeded			
CAAQS 24-hour standard (50 μg/m³)	40	31	15
NAAQS 24-hour standard (150 μg/m³)	0	0	0
Suspended Particulates ($PM_{2.5}$)			
National Maximum 24-hour Concentration (μg/m³)	54.9	61.4	43.5
24-hour Standard 98th Percentile (μg/m³)	30.9	34.1	28.3
National Annual Average Concentration (μg/m³)	12.0	12.8	10.8
State Annual Average Concentration (μg/m³)	16.3	16.0	10.8
Number of Days Standard Exceeded			
NAAQS 24-hour standard (35 μg/m³)	2	6	6
Lead (Pb)			
Maximum 30-day Average (μg/m³)	0.017	0.011	0.012
Maximum 30-month Rolling Average (μg/m³)	0.01	0.01	0.010
Number of Days Standard Exceeded			
CAAQS 30-day Average standard (1.5 μg/m³)	0	0	0
NAAQS 3-month Rolling Average standard (0.15 μg/m³)	0	0	0

Sources: CARB 2021d; USEPA 2021f; SCAQMD 2021. Data compiled by ICF.
*=insufficient data available to determine value
CAAQS=California Ambient Air Quality Standards; mg/m³=milligrams per cubic meter; NAAQS=National Ambient Air Quality Standards; ppm=parts per million; μg/m³=micrograms per cubic meter

The FCAA requires USEPA to designate areas within the country as either attainment or nonattainment for each criteria pollutant based on whether NAAQS have been achieved. Similarly, the CCAA requires CARB to designate areas within California as either attainment or nonattainment for each criteria pollutant based on whether CAAQS have been achieved. If a pollutant concentration is lower than the state or federal standard, the area is classified as being in attainment for that pollutant. If a pollutant violates the standard, the area is considered a nonattainment area. If data are insufficient to determine whether a pollutant is violating the standard, the area is designated unclassified. Additionally, where monitored pollutant concentrations exceeded the standard in question in the past but are no longer in violation of that standard that area is designated a maintenance area. Under the CCAA, areas are designated as nonattainment for a pollutant if air quality data show that a state standard for the pollutant was violated at least once during the previous three calendar years. Exceedances that are affected by highly irregular or infrequent events are not considered violations of a state standard and are not used as a basis for designating areas as nonattainment.

Table 2.1-2 summarizes the attainment status for the Los Angeles County portion of the Basin with respect to NAAQS and CAAQS. CAAQS and NAAQS represent concentration limits of criteria air pollutants needed to adequately protect human health and the environment. Existing violations of the O_3 and PM_{10} ambient air quality standards indicate that certain individuals exposed to this pollutant may experience certain health effects, including increased incidence of acute and chronic cardiovascular and respiratory ailments.

Table 2.1-2. Federal and State Attainment Status for the Los Angeles County Portion of the South Coast Air Basin

Criteria Pollutant	Federal Designation	State Designation
Ozone (O_3) (1-hour standard)	—	Nonattainment
Ozone (O_3) (8-hour standard)	Nonattainment – Extreme (P)	Nonattainment
Carbon Monoxide (CO)	Maintenance – Serious (P)	Attainment
Particulate Matter (PM_{10})	Maintenance – Serious (P)	Nonattainment
Fine Particulate Matter ($PM_{2.5}$)	Nonattainment – Serious (P)	Nonattainment
Nitrogen Dioxide (NO_2)	Maintenance (P)	Attainment
Sulfur Dioxide (SO_2)	Attainment	Attainment
Lead (Pb)	Nonattainment (P)	Attainment

Sources: USEPA 2021g; CARB 2020a.
(P)=designation applies to a portion of the county

2.2 Regulatory Framework

2.2.1 Federal

Federal Clean Air Act

The FCAA was first enacted in 1963 and has been amended numerous times in subsequent years (1967, 1970, 1977, and 1990). The FCAA establishes NAAQS and specifies future dates for achieving compliance. The FCAA also mandates that each state submit and implement a State Implementation Plan (SIP) for local areas not meeting those standards. The plans must include pollution control measures that demonstrate how the standards will be met. Because the project site is within the Los Angeles County portion of the Basin, it is in an area designated as nonattainment for certain pollutants that are regulated under the FCAA.

The 1990 amendments to the FCAA identify specific emission-reduction goals for areas not meeting NAAQS. These amendments require both a demonstration of reasonable progress toward attainment and incorporation of additional sanctions for failure to attain or meet interim milestones. The sections of the FCAA that would most substantially affect the development of the project include Title I (Nonattainment Provisions) and Title II (Mobile-Source Provisions).

Title I provisions were established with the goal of attaining NAAQS for criteria pollutants. Table 2.2-1 shows NAAQS currently in effect for each criteria pollutant. NAAQS were amended in July 1997 to include an 8-hour standard for O_3 and adopt a standard for $PM_{2.5}$. The $PM_{2.5}$ NAAQS was most recently amended in 2012 and the 8-hour O_3 NAAQS was further amended in October 2015.

Table 2.2-1. Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	CAAQS	NAAQS[a]
Ozone (O_3)	1-hour	0.09 ppm	-
	8-hour	0.070 ppm	0.070 ppm
Respirable Particulate Matter (PM_{10})	Annual mean	20 µg/m^3	-
	24-hour	50 µg/m^3	150 µg/m^3
Fine Particulate Matter ($PM_{2.5}$)	Annual mean	12 µg/m^3	12 µg/m^3
	24-hour	No Standard	35 µg/m^3
Carbon Monoxide (CO)	1-hour	20 ppm	35 ppm
	8-hour	9.0 ppm	9 ppm
Nitrogen Dioxide (NO_2)	Annual mean	0.030 ppm	0.053 ppm
	1-hour	0.18 ppm	100 ppb
Sulfur Dioxide (SO_2)	Annual mean	–	0.03 ppm
	24-hour	0.04 ppm	0.14 ppm
	3-hour	–	–
	1-hour	0.25 ppm	75 ppb
Lead (Pb)	30-day Average	1.5 µg/m^3	–
	Calendar Quarter	–	1.5 µg/m^3
	Rolling 3-Month Average	–	0.15 µg/m^3
Sulfates	24-hour	25 µg/m^3	No federal standard
Hydrogen Sulfide	1-hour	0.03 ppm (42 µg/m^3)	No federal standard
Vinyl Chloride	24-hour	0.01 ppm (26 µg/m^3)	No federal standard
Visibility-Reducing Particle Matter	8-hour	–	No federal standard

Source: CARB 2016a.
[a] National standards are divided into primary and secondary standards. Primary standards are intended to protect public health, whereas secondary standards are intended to protect public welfare and the environment. Only Primary standards are shown here.
ppb=parts per billion; ppm=parts per million; µg/m^3=micrograms per cubic meter

2.2.2 Emission Standards for Non-Road Diesel Engines

To reduce emissions from non-road diesel equipment, USEPA established a series of increasingly strict emission standards for new non-road diesel engines. Tier 1 standards were phased in on newly manufactured equipment from 1996 through 2000 (year of manufacture), depending on the engine horsepower (hp) category. Tier 2 standards were phased in on newly manufactured equipment from 2001 through 2006. Tier 3 standards were phased in on newly manufactured equipment from 2006 through 2008. Tier 4 standards, which require advanced emission control technology, were phased in from 2008 through 2015.

2.2.3 Emission Standards for Heavy-Duty Vehicles

Emissions from heavy-duty trucks are managed by regulations and emission limits implemented at the federal, state, and local levels. USEPA has established a series of increasingly strict emission standards for new heavy-duty bus and truck engines. In December 2000, USEPA signed the Heavy-Duty Highway Rule, which reduces emissions from on-road, heavy-duty diesel trucks by establishing a series of increasingly strict emission standards for new engines. Manufacturers were required to produce new diesel vehicles that meet particulate matter and NO_X emission standards beginning with model year 2007, with the phase-in period being between 2007 and 2010. The phase-in was based on a percentage-of-sales basis: 50 percent from 2007 to 2009 and 100 percent in 2010. Requirements apply to engines installed in all vehicles with Gross Vehicle Weight Rating above 14,000 pounds, and to some engines installed in vehicles with Gross Vehicle Weight Rating between 8,500 and 14,000 pounds (USEPA 2001). In November 2018, USEPA announced that it would pursue the Cleaner Trucks Initiative to update NO_X emissions standards for heavy-duty trucks. USEPA is currently working with a range of stakeholders to identify technologies capable of reducing criteria pollutant emissions from heavy-duty trucks and to develop the data and analyses needed to inform a comprehensive rulemaking (USEPA 2021h).

2.2.4 State

2.2.5 California Clean Air Act

The CCAA, signed into law in 1988, requires all areas of the state to achieve and maintain CAAQS by the earliest practical date. CAAQS incorporate additional standards for most of the criteria pollutants and set standards for other pollutants recognized by the state. In general, the California standards are more health protective than the corresponding NAAQS. California has also set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. The Basin is in compliance with these standards. Table 2.2-1 shows CAAQS currently in effect for each criteria pollutant.

The CARB and local air districts bear responsibility for achieving California's air quality standards, which are to be achieved through district-level air quality management plans that would be incorporated into the SIP. In California, USEPA has delegated authority to prepare SIPs to CARB, which, in turn, has delegated that authority to individual air districts. CARB traditionally has established state air quality standards, maintaining oversight authority in air quality planning, developing programs for reducing emissions from motor vehicles, developing air emission inventories, collecting air quality and meteorological data, and approving SIPs.

The CCAA substantially adds to the authority and responsibilities of air districts. The CCAA designates air districts as lead air quality planning agencies, requires air districts to prepare air quality plans, and grants air districts authority to implement transportation control measures. The CCAA also emphasizes the control of "indirect and area-wide sources" of air pollutant emissions. The CCAA gives local air pollution control districts explicit authority to regulate indirect sources of air pollution and to establish traffic control measures.

2.2.6 Statewide Truck and Bus Regulation

Originally adopted in 2005, the on-road truck and bus regulation requires heavy trucks to be retrofitted with particulate matter filters. The regulation applies to privately and federally owned diesel-fueled trucks with a gross vehicle weight rating greater than 14,000 pounds. Compliance with the regulation can be reached through one of two paths: (1) vehicle retrofits according to engine year or (2) phase-in schedule. Compliance paths ensure that by January 2023, nearly all trucks and buses will have 2010 model year engines or newer (CARB 2019a).

2.2.7 Carl Moyer Program

The Carl Moyer Memorial Air Quality Standards Attainment Program is a voluntary program that offers grants to owners of heavy-duty vehicles and equipment. The program is a partnership between CARB and the local air districts throughout the state to reduce air pollution emissions from heavy-duty engines. Locally, the air districts administer this program.

2.2.8 Toxic Air Contaminants Regulations

California regulates TACs primarily through the Tanner Air Toxics Act (Assembly Bill [AB] 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588). The Toxic Air Contaminant Identification and Control Act (AB 1807) created California's program to reduce exposure to air toxics. The Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) supplements the AB 1807 program by requiring a statewide air toxics inventory, notification of people exposed to a significant health risk, and facility plans to reduce these risks. In August 1998, CARB identified particulate emissions from diesel-fueled engines as TACs. In September 2000, CARB approved a comprehensive diesel risk reduction plan to reduce emissions from both new and existing diesel-fueled engines and vehicles. As an ongoing process, CARB reviews air contaminants and identifies those that are classified as TACs. CARB also continues to establish new programs and regulations for the control of TACs, including DPM, as appropriate.

CARB has promulgated the Airborne Toxic Control Measures (ATCM) for several source categories that are codified in the California Code of Regulations (CCR). The ATCM specifies measures to reduce public exposure to diesel particulate matter and other air contaminants by establishing idling restrictions, emission standards, and other requirements for heavy-duty diesel engines and alternative idle-reduction technologies to limit the idling of diesel-fueled commercial motor vehicles. One ATCM (13 CCR § 2485) requires that drivers of diesel-fueled commercial motor vehicles with gross vehicle weight ratings greater than 10,000 pounds, including buses and sleeper berth equipped trucks, not idle the vehicle's primary diesel engine longer than five minutes at any location.

In 2017, Governor Jerry Brown signed AB 617 into law to develop a new community focused program to more effectively reduce exposure to air pollution and preserve public health. CARB and local air quality districts are directed to take measures to protect communities disproportionally impacted by air pollution through local, community-specific strategies that are focused on the individual needs and issues particular to each community. Tasked to prepare a statewide strategy to reduce emissions in communities affected by high exposure to air pollution, CARB has established the Community Air Protection Program (CAPP) to identify and prioritize communities on an annual basis where reduction from pollution exposure is needed based on environmental, health, and socioeconomic information. This statewide effort to reduce exposure in communities most impacted by air pollution will require

community air monitoring, community emission reduction plans, and incentive funding to deploy the cleanest technologies in the most impacted areas. Although CARB ultimately selects the communities to be included in the CAPP and establishes the program requirements, AB 617 places the responsibility for the development and implementation of community emissions reduction programs primarily on the local air quality districts. Specifically, once communities are selected for action by CARB, the local air quality districts are tasked to: (1) form a community steering committee and begin development of community emission reduction programs; 2) develop expedited schedules for implementing best available retrofit control technology (BARCT) requirements; (3) deploy monitoring in communities selected for community air monitoring systems; and (4) adopt programs to reduce emissions in the selected communities (CARB 2021e).

2.2.9 Regional

2.2.10 South Coast Air Quality Management District

At the regional level, responsibilities of air quality districts include overseeing stationary-source emissions, approving permits, maintaining emissions inventories, maintaining air quality stations, overseeing agricultural burning permits, and reviewing air quality–related sections of environmental documents required by the California Environmental Quality Act (CEQA). The air quality districts are also responsible for establishing and enforcing local air quality rules and regulations that address the requirements of federal and state air quality laws and for ensuring that NAAQS and CAAQS are met.

The project site lies within the Los Angeles County portion of the Basin, which is under the jurisdiction of SCAQMD. SCAQMD has jurisdiction over an area of approximately 10,743 square miles, including all of Orange County; Los Angeles County, except for the Antelope Valley; the non-desert portion of western San Bernardino County; and the western and Coachella Valley portions of Riverside County. The Basin is a sub-region of SCAQMD's jurisdiction. Although air quality in this area has improved, the Basin requires continued diligence to meet air quality standards.

SCAQMD has adopted a series of air quality management plans (AQMPs) to meet CAAQS and NAAQS. These plans require, among other emissions-reducing activities, control technology for existing sources, control programs for area sources and indirect sources, an SCAQMD permitting system that allows no net increase in emissions from any new or modified (i.e., previously permitted) emissions sources, and transportation control measures. The most recent publication is the 2016 AQMP, which is intended to serve as a regional blueprint for achieving the federal air quality standards and healthful air.

The 2016 AQMP represents a thorough analysis of existing and potential regulatory control options, and includes available, proven, and cost-effective strategies to pursue multiple goals in promoting reductions in GHG emissions and toxic risk, as well as efficiencies in energy use, transportation, and goods movement. The 2016 AQMP focuses on demonstrating NAAQS attainment dates for the 2008 8-hour O_3 standard, the 2012 annual $PM_{2.5}$ standard, and the 2006 24-hour $PM_{2.5}$ standard. The 2016 AQMP includes both stationary and mobile source strategies to ensure that rapidly approach attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if NAAQS are not met by the established date.

SCAQMD published the *CEQA Air Quality Handbook* in November 1993[1] to help local governments analyze and mitigate project-specific air quality impacts. This handbook provides standards, methodologies, and procedures for conducting air quality analyses as part of CEQA) documents prepared within SCAQMD's jurisdiction. In addition, SCAQMD has published two guidance documents: *Localized Significance Threshold Methodology* (2008) and *Final-Methodology to Calculate Particulate Matter (PM)$_{2.5}$ and PM$_{2.5}$ Significance Thresholds* (2006). These publications provide guidance for evaluating localized effects from mass emissions during construction. Both were used in the preparation of this analysis.

The project is also required to comply with all applicable SCAQMD Rules and Regulations pertaining to construction activities, including, but not limited to the following.

- *Rule 401– Visible Emissions.* This rule prohibits the discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any 1 hour that is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart, as published by the U.S. Bureau of Mines.
- *Rule 402– Nuisance.* This rule prohibits the discharge of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public; endanger the comfort, repose, health, or safety of any such persons or the public; or cause, or have a natural tendency to cause, injury or damage to business or property. Odors are regulated under this rule.
- *Rule 403 – Fugitive Dust.* This rule prohibits emissions of fugitive dust from any active operation, open storage pile, or disturbed surface area that remains visible beyond the property line of the emission's source. During construction, best available control measures identified in the rule would be required to minimize fugitive dust emissions from proposed earthmoving and grading activities. These measures would include site pre-watering and re-watering as necessary to maintain sufficient soil moisture content. Additional requirements apply to construction projects on properties with 50 or more acres of disturbed surface area or any earthmoving operation with a daily earthmoving or throughput volume of 5,000 cubic yards or more three times during the most recent 365-day period. These requirements include submittal of a dust control plan, maintenance of dust control records, and designation of an SCAQMD-certified dust control supervisor.
- *Rule 1108 – Cutback Asphalt.* This rule specifies VOC content limits for cutback asphalt.
- *Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines.* This rule specifies requirements for stationary diesel engines, including emergency standby generators. It requires owners or operators of emergency standby generators to keep monthly logs of usage, limits maintenance and testing to 50 hours per year, and requires emission rates to not exceed 0.40 gram per brake-horsepower hour.
- *Rule 1113 – Architectural Coatings.* This rule limits the VOC content in architectural coatings used in the SCAQMD jurisdiction. These limits are application-specific and are updated as availability of low-VOC products expands.

[1] Section updates provided on the SCAQMD website: http://www.aqmd.gov/ceqa/hdbk.html.

SCAQMD rules and regulations that would also be applicable to the project's operational activities include, but are not limited to the following.

- *Rule 1113 – Architectural Coatings.* This rule limits the VOC content in architectural coatings used in the SCAQMD jurisdiction. These limits are application-specific and are updated as availability of low-VOC products expands.
- *Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines.* This rule specifies requirements for stationary diesel engines, including emergency standby generators. It requires owners or operators of emergency standby generators to keep monthly logs of usage, limits maintenance and testing to 50 hours per year, and requires emission rates to not exceed 0.40 gram per brake-horsepower hour.

2.2.11 Southern California Association of Governments

The Southern California Association of Governments (SCAG) is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial counties. SCAG addresses regional issues related to transportation, the economy, community development, and the environment, and is the federally designated metropolitan planning organization for a majority of the region and the largest metropolitan planning organization in the nation. As required by federal and state law, SCAG develops plans pertaining to transportation, growth management, hazardous waste management, housing, and air quality. SCAG data are used in the preparation of air quality forecasts and the conformity analysis included in the AQMP.

SCAG is responsible for developing long-range transportation plans and a sustainability strategy for a vast and varied region. The centerpiece of that planning work is Connect SoCal, the 2020–2045 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) (2020–2045 RTP/SCS). Connect SoCal is supported by a combination of transportation and land use strategies that outline how the region can achieve California's greenhouse gas emission reduction goals and federal Clean Air Act requirements (SCAG 2020a). The 2020–2045 RTP/SCS is focused on creating dynamic, connected built environments that support multimodal mobility, reduced reliance on single-occupancy vehicles, and reduced air pollutant emissions through the implementation of center focused placemaking, and development in priority growth areas, such as job centers, transit priority areas (TPA), and high quality transit areas (SCAG 2020a).

2.2.12 City of Los Angeles General Plan Air Quality Element

The City's *General Plan – Air Quality Element* addresses citywide goals, objectives, and policies designed to promote cleaner air and improved public health (City of Los Angeles 1992). The principal objective of the Air Quality Element of the general plan is to aid the region in attaining the state and federal ambient air quality standards while continuing economic growth and improvement in the quality of life afforded to City residents. The Air Quality Element also documents how the City will implement local programs contained in the general plan through recognition of the interrelationships between transportation and land use planning. The Air Quality Element establishes six citywide criteria for meeting its mobility and air quality goals:

- Good air quality in an environment of continued population growth and healthy economic structure

- Less reliance on single-occupant vehicles with fewer commute and non-work trips
- Efficient management of transportation facilities and system infrastructure using cost-effective system management and innovative demand-management techniques
- Minimal impacts of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality
- Energy efficiency through land use and transportation planning, the use of renewable resources and less-polluting fuels and the implementation of conservation measures such as site orientation and tree planting
- Citizen awareness of the linkages between personal behavior and air pollution and participation in efforts to reduce air pollution

In accordance with CEQA requirements, the City assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation. The City uses the SCAQMD's *CEQA Air Quality Handbook* and SCAQMD's supplemental online guidance/information for the environmental review of plans and development proposals within its jurisdiction.

2.3 Air Quality Impacts

2.3.1 Methodology

Air pollutant emissions would occur from both construction and operation of the new recreation center at the project site. The project's construction activities would generate temporary air pollutant emissions from the use of off-road mobile equipment and combustion-powered tools at the project site as well as construction-related worker, vendor truck, and haul truck trips traveling to and from the project site. Once constructed, air pollutant emissions would result from operations of the new recreation center, which includes mobile, energy, and area source emissions. The change in air pollutant emissions generated by the project relative to baseline conditions has been estimated and compared with the applicable air quality thresholds of significance recommended by SCAQMD.

2.3.2 Short-term Construction-Generated Emissions

Construction of the project would generate emissions of ROG, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$ that could result in short-term air quality effects during the construction period. Emissions would originate from off-road equipment exhaust, employee and haul truck vehicle exhaust (on-road vehicles), site grading and earth movement, paving activities, and the application of architectural coatings. It is anticipated that project construction would commence in April 2022 and occur over an approximately 11-month period before being completed in March 2023.

The project's short-term construction emissions consisting of combustion exhaust, fugitive dust (i.e., PM_{10} and $PM_{2.5}$), and fugitive off-gassing (i.e., ROG) were estimated using a combination of

emission factors and methodologies from the California Emissions Estimator Model (CalEEMod), version 2016.3.2, CARB's most recent EMission FACtors model (EMFAC2021), and USEPA's AP-42 Compilation of Air Pollutant Emission Factors. The modeling was conducted based on project-specific construction data (e.g., schedule, equipment, truck volumes) provided by the City's Department of Public Works, Bureau of Engineering (BOE), where available. Where project-specific information was not available, reasonable assumptions based on similar projects and default model settings were used to estimate criteria air pollutant and ozone precursor emissions. Details regarding the methods and activity assumptions by source type are provided below.

- **Off-Road Equipment**—Emission factors for off-road construction equipment (e.g., excavators, pavers) were obtained from the CalEEMod (version 2016.3.2) User's Guide appendix, which provides values per unit of activity (in grams per horsepower-hour) by calendar year (California Air Pollution Control Officers Association [CAPCOA] 2017). Criteria pollutants were estimated by multiplying the CalEEMod emission factors by the equipment inventory.

- **On-Road Vehicles**—On-road vehicles (e.g., delivery trucks, haul trucks, and passenger vehicles) would be required for material deliveries to the project site, material hauling from the project site, onsite material movement, and employee commuting. Exhaust emissions from on-road vehicles were estimated using the EMFAC2021 emissions model and activity data (number of vehicles and miles traveled per day). Emission factors for haul trucks are based on aggregated-speed emission rates for EMFAC's heavy-heavy duty truck (HHDT) vehicle category. Emission factors for water and vendor trucks are based on aggregated-speed emission rates for EMFAC's HHDT and medium heavy-duty trucks (MHDT) vehicle categories. Consistent with CalEEMod methods, an emissions factor for vendor and water trucks was based on the vendor fleet consisting of 50 percent MHDT and 50 percent HHDT. To estimate vehicle travel within the project site, emission factors for onsite water, vendor, and haul trucks were based on the same vehicle categories but assuming a conservative travel speed of five miles per hour. Emission factors for employee commute vehicles are based on a weighted average of the aggregated-speed emission rates for EMFAC's light-duty automobile/light-duty truck vehicle categories (LDA, LDT1, and LDT2). To be consistent with CalEEMod methodology, a weighted emissions factor for the employee commute vehicles consisted of a fleet mix of 50 percent LDA, 25 percent LDT1, and 25 percent LDT2.

  To account for fugitive dust emissions from vehicle travel on unpaved surfaces within the project site, it was assumed that each vendor and haul truck would travel a distance of 0.24 mile (distance across project site) on unpaved surfaces within the site twice daily (i.e., arrival and departure), whereas water trucks would travel this distance approximately eight times a day for fugitive dust control under SCAQMD Rule 403. Fugitive dust emissions from this travel was adjusted using the appropriate unpaved emission factors from USEPA's AP-42 Compilation of Air Pollutant Emission Factors, Section 13.2.2, *Unpaved Roads*, guidance. Fugitive dust from travel on paved roads by worker vehicles and trucks was estimated using emission factors from USEPA's AP-42 Compilation of Air Pollutant Emission Factors, Section 13.2.1, *Paved Roads* guidance, and CARB's Miscellaneous Process Methodology 7.9, *Entrained Road Travel, Paved Road Dust*.

- **Site Grading and Earth Movement**— Fugitive dust emissions from earth movement (e.g., site preparation and excavation/grading and truck loading) were quantified using emission factors from CalEEMod. Data on the total graded acreage and quantity of soil excavation were obtained

from BOE. The modeling of the project's fugitive dust emissions also accounts for implementation of mandatory fugitive dust control measures required by SCAQMD Rule 403.

- **Paving**—Fugitive ROG emissions were calculated based the amount of square feet to be paved at the project site and the CalEEMod default emission factor of 2.62 pounds of ROG per acre paved (CAPCOA 2017).
- **Architectural Coatings**—ROG emissions from the application of architectural coatings were calculated based the total surface amount to be coated for project and the VOC content of the coatings. The amount of surface to be coated was determined using CalEEMod's default assumption that the total surface for painting for a project equals two times that for non-residential square footage. Additionally, of the total surface area to be coated, CalEEMod assumes that 75 percent of the area would be for the interior surfaces and 25 percent would be for the exterior shell (CAPCOA 2017). The default VOC content value of 100 g/L used by CalEEMod for parking lot coatings was used in estimating the project's emissions.

  ROG emissions from the painting of stripes, handicap symbols, directional arrows, and car space descriptions in the parking area of the project site were also calculated based on the CalEEMod default assumption that 6 percent of a project's parking lot area would be painted. The default VOC content value of 100 g/L used by CalEEMod for parking lot coatings was used in estimating the project's emissions.

The resulting pollutant emissions estimated for the project were then assessed against SCAQMD's regional significance thresholds, which are shown in Table 2.3-2, to determine the project's impacts on regional air quality. The modeling output files are provided in Appendix A of this report.

In conducting the localized air quality analysis for the project, which focuses only on onsite emissions and their impacts on nearby sensitive receptor locations, the project's peak onsite construction emissions generated from combustion sources (e.g., off-road construction equipment and vehicle travel by water, vendor, and haul trucks within the project site) and fugitive sources (e.g., grading and demolition dust) were extracted from the total emission estimates conducted for the regional air quality analysis. These daily total onsite combustion, mobile, and fugitive dust emissions associated with the project's construction activities were evaluated against SCAQMD's localized significance thresholds (LSTs) for a 2.3-acre site, which are shown in Table 2.3-3.

2.3.3 Long-term Operational Emissions

Operation of the project would generate emissions of ROG, NO_X, CO, SOx, PM_{10}, and $PM_{2.5}$ that could result in long-term impacts on ambient air quality. The project's emissions of these air pollutants and precursors would be generated from area, energy, and mobile sources and were quantified using CalEEMod. Area-source emissions, which are widely distributed and composed of many small emissions sources (e.g., landscaping equipment, consumer products, painting operations, etc.), and energy-source emissions, which are generated from activities in buildings where natural gas is used (e.g., heating), were modeled according to the size and type of land uses proposed at the project site.

The modeling of mass mobile-source emissions during project operations was conducted using CalEEMod. Mobile emissions were estimated based on vehicle fleet emission factors generated from EMFAC2021 and daily trips provided by the Transportation Assessment Memorandum prepared for the project (Fehr & Peers 2021).

Stationary-source emissions at the project site would be generated by one 40 kW diesel-powered emergency generator onsite for periodic maintenance and testing operations throughout the year. Emissions were modeled using CalEEMod and based on the size of the generator and the estimated hours of daily and annual operation. The annual operation hours for the emergency generator were modeled at 50 hours per the requirement under SCAQMD Rule 1470, which establishes requirements for stationary diesel-fueled internal combustion engines such as emergency generators, that the operation of new stationary emergency standby diesel-fueled engines be restricted to no more than 50 hours per year for maintenance and testing. With respect to daily emissions, it was assumed that the project's onsite emergency generator would each operate for two hours on a given day for maintenance and testing purposes.

Overall, the resulting long-term operational emissions that would be generated by the project were then assessed against the applicable SCAQMD thresholds (refer to Table 2.3-2) to determine the project's impacts on regional air quality.

Aside from regional air quality impacts, the project's localized air quality impacts during operations at nearby sensitive receptor locations were analyzed by assessing the project's onsite operational emissions against SCAQMD's applicable operational LSTs. To account for mobile-source emissions associated with vehicles traveling within the parking lot, it was conservatively assumed that 5 percent of the total daily offsite mobile emissions generated during project operations would occur within the project site. The project's total onsite operational emissions were then evaluated against SCAQMD's applicable operational LSTs (refer to Table 2.3-2).

2.3.4 Operational Carbon Monoxide Hot Spots

A CO hot spot is a localized concentration of CO that is above the state or national 1-hour or 8-hour ambient air standards for the pollutant. As part of SCAQMD's 2003 AQMP, which is the most recent AQMP that addresses CO concentrations, a detailed CO hot spots analysis was conducted by SCAQMD at four heavily congested intersections in the Basin that were likely to experience the highest CO concentrations. The results of the CO hot spots analysis did not predict a violation of CO standards at any of these four intersections. As such, the potential for the project to result in localized CO impacts occurring from the addition of project-associated traffic volumes at intersections is assessed by comparing the highest daily traffic volumes provided by the project's traffic engineer at the intersections nearest to the project site against the highest traffic volumes at the busiest intersection evaluated in the 2003 AQMP. Where it is determined that the project's highest intersection traffic volumes would be lower than the traffic volumes at the four intersections modeled by SCAMQD, it can be concluded that the project would not result in any localized CO impacts.

2.3.5 Thresholds of Significance

The City has not developed specific air quality thresholds for air quality impacts. Instead, it relies on the regional and localized pollutant thresholds that have been established by SCAQMD to make determinations regarding air quality impacts. The thresholds used to assess the impacts of the project are discussed below.

Regional Thresholds

The SCAQMD has established air quality significance thresholds that are applicable to both construction and operational emissions generated by projects within its jurisdiction. These significance thresholds were derived using regional emissions modeling to determine maximum allowable mass quantities of pollutant emissions that could be generated by individual projects without adversely affecting air quality and creating public health concerns based on existing pollution levels. These regional pollutant emission thresholds are shown in Table 2.3-1.

Table 2.3-1. SCAQMD Regional Air Quality Significance Thresholds

	Mass Daily Thresholds (pounds/day)	
Pollutant	**Construction**	**Operation**
Nitrogen Oxides (NO_X)	100	55
Volatile Organic Compounds (VOC)[a]	75	55
Suspended Particulate Matter (PM_{10})	150	150
Fine Particulate Matter ($PM_{2.5}$)	55	55
Sulfur Oxides (SO_X)	150	150
Carbon Monoxide (CO	550	550
Lead (Pb)[b]	3	3

Source: SCAQMD 2019.
[a] The terms VOC and reactive organic gases (ROG) are used interchangeably. SCAQMD uses VOC, and CalEEMod uses ROG.
[b] The project would result in no lead emissions sources during the construction period or operations. As such, lead emissions are not evaluated herein.

Localized Thresholds

Aside from regional air quality impacts, projects in the Basin are also required to analyze local air quality impacts. The SCAQMD has developed LSTs that represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standards, and thus would not cause or contribute to localized air quality impacts. LSTs are developed based on the ambient concentrations of that pollutant for each of the 38 source receptor areas (SRAs) in the Basin. The localized thresholds, which are found in the mass rate look-up tables in SCAQMD's *Final Localized Significance Threshold Methodology* document, were developed for the analysis of projects that are less than or equal to five acres in size and applicable only to the following criteria pollutants: NO_X, CO, PM_{10}, and $PM_{2.5}$. The analysis of localized air quality impacts focuses only on the onsite activities of a project and does not include emissions that are generated offsite, such as on-road haul or delivery truck trips (SCAQMD 2008a).

The mass rate look-up tables developed by SCAQMD present LST values in the form of allowable emissions (in pounds per day) as a function of receptor distance from a project's site boundary. These LST values were developed by SCAQMD for 1-acre, 2-acre, and 5-acre sites. The LSTs established for each of the aforementioned site acreages represent the level of pollutant emissions that would not exceed the most stringent applicable federal or state ambient air quality standards. As the project site is approximately 2.3 acre in size, the applicable LSTs for a 2-acre site are used to

evaluate the project's onsite emissions. The construction and operational LSTs for a 2-acre site in SRA 1 (Central Los Angeles), which is where the project site is located, are shown in Table 2.3-2.

Table 2.3-2. SCAQMD LSTs

Pollutant Monitored within SRA 1 Central Los Angeles	2.3-Acre Site[a] Allowable Emissions (pounds/day) as a Function of Receptor Distance (feet) from Site Boundary 82 feet (25 meters)[b]
Construction Screening Thresholds	
Nitrogen Oxides (NO_X)[c]	108
Carbon Monoxide (CO)	1,048
Respirable Particulate Matter (PM_{10})	8
Fine Particulate Matter ($PM_{2.5}$)	5
Operational Screening Thresholds	
Nitrogen Oxides (NO_X)[b]	108
Carbon Monoxide (CO)	1,048
Respirable Particulate Matter (PM_{10})	2
Fine Particulate Matter ($PM_{2.5}$)	2

Source: SCAQMD 2008a.
[a] The LSTs for a 2-acre site with a 25-meter receptor distance in SRA 1 (obtained from Appendix C [Localized Significance Threshold Screening Tables] of SCAQMD's *Final Localized Significance Threshold Methodology* document).
[b] Although SCAQMD's mass rate look-up tables present LST values for receptor distances of 82, 164, 328, 656, and 1,640 feet from a project's site boundary, for the purpose of this analysis only the LST values at a receptor distance of 82 feet is provided since LSTs at this distance are the most conservative and best meet the distances at which the nearest offsite sensitive receptors are from the project site among the distances in SCAQMD's LST lookup tables. According to SCAQMD's LST methodology, it is recommended that projects with boundaries closer than 82 feet (25 meters) from the nearest receptor use the LSTs for receptors located at 82 feet.
[c] The localized thresholds listed for NO_X in this table take into consideration the gradual conversion of NO to NO_2. The analysis of localized air quality impacts associated with NO_X emissions focuses on NO_2 levels because of their association with adverse health effects.
LST=Local Significance Threshold

Carbon Monoxide Hot-Spots

Heavy traffic congestion can contribute to high levels of CO. Individuals exposed to these CO "hot-spots" may have a greater likelihood of developing adverse health effects (as described in Section 2.1., *Existing Setting*). The potential for the project to result in localized CO impacts at intersections resulting from addition of its traffic volumes is assessed against the health-based CAAQS and NAAQS for CO. SCAQMD states that a project impact is significant if it causes or contributes to an exceedance of the following attainment standards:

- 1-hour standards of 20 ppm (state) and 35 ppm (federal)
- 8-hour standards of 9.0 ppm (state) and 9 ppm (federal)

Diesel Particulate Matter

Based on applicable TAC criteria set forth by SCAQMD, the project would have a significant TAC impact if the project results in the exposure of sensitive receptors to carcinogenic or toxic air

contaminants that exceed the maximum incremental cancer risk threshold of 10 in 1 million or increases the non-cancer health risk such that the ratio of the chronic or acute exposure to the reference exposure level (i.e., "hazard index") exceeds 1.0 (SCAQMD 2019).

2.3.6 Best Management Practices

The following best management practice (BMP) would be implemented as part of the project:

BMP-AQ-1: The following measures will be employed by the project to minimize construction-related emissions:

- Water exposed areas four times per day to control dust in accordance with SCAQMD Rule 403.
- All off-road diesel-powered equipment greater than 50 horsepower used during construction will be equipped with engines that meet USEPA Tier 4 Final emission standards.

2.3.7 Impact Analysis

Consistency with Applicable Air Quality Plan

The 2016 AQMP was adopted by the SCAQMD as a program to lead the Basin into compliance with criteria pollutant standards and other federal requirements for which the Basin is not in compliance. The AQMP relies on emissions forecasts based on the demographic and economic growth projections provided by the SCAG 2016 RTP/SCS (SCAQMD 2017). SCAG is charged by California law to prepare and approve "the portions of each AQMP relating to demographic projections and integrated regional land use, housing, employment, and transportation programs, measures and strategies" (SCAQMD 2017). A project is considered to be consistent with the AQMP and not obstruct its implementation if, in part, it is consistent with the demographic and economic growth projections used in the formulation of the AQMP. According to SCAQMD, there are two key indicators of consistency with the applicable air quality plan: 1) whether the project would result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the air quality plan; and 2) whether the proposed project would cause the project area to exceed the forecasted growth incorporated into the applicable air quality plan.

Construction

The first consistency criterion is related to violations of CAAQS and NAAQS. Construction emissions associated with development of the proposed project would be temporary in nature and would not have a long-term impact on the region's ability to meet California and federal air quality standards. As shown later in Table 2.3-6 and Table 2.3-7 of this report, maximum daily emissions of air pollutants from construction activities would not exceed SCAQMD's regional or localized significance threshold values. As such, the project's emissions would not increase concentrations of criteria pollutants or their precursors in a manner that could obstruct SCAQMD's efforts to achieve attainment of ambient air quality standards for any criteria pollutant for which it is currently not in attainment, or jeopardize the current attainment status of the Basin for other criteria pollutants. In addition, construction activities associated with the proposed project would comply with State and local strategies designed to control air pollution, such as SCAQMD Rules 402 (nuisance emissions)

and 403 (dust control). By adhering to the SCAQMD rules and regulations pertaining to fugitive dust control and maintaining maximum daily emissions below the SCAQMD mass daily thresholds, project construction activities would be consistent with the goals and objectives of the applicable air quality plan to improve air quality in the Basin and would not result in an air quality violation.

The second consistency criterion requires that the proposed project not exceed the assumptions incorporated into the applicable air quality plan. The most applicable air quality plans for the proposed project are the 2016 AQMP, which is based on the SCAG 2016–2040 RTP/SCS. A large-scale individual project could potentially exceed assumptions in the air quality plan if it resulted in a zoning change that led to disproportionate growth relative to the land use types analyzed in the air quality plan. However, the air quality plan focuses on long-term, operational sources of air pollutants that contribute to the regional emission inventory. Short-term, temporary emissions associated with construction activities would not conflict with the air quality plan so long as no SCAQMD daily thresholds of significance for mass emissions are exceeded. As shown later in Table 2.3-6 and Table 2.3-7 of this report, construction activities would not generate daily air pollutant emissions of sufficient magnitude to exceed any applicable threshold of significance and impacts listed in applicable air quality plans.

Operations

Implementation of the proposed project would develop a recreation center and add much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The 20,000 square foot multi-faceted facility will also house flex spaces to accommodate a variety of recreation related social programs, and a community meeting room. No stationary source emissions would be associated with the development of the project. With respect to the first consistency criterion, the emissions modeling results presented later in this report in Table 2.3-7 and Table 2.3-8 demonstrate that operation of the proposed project would not exceed any applicable SCAQMD thresholds. As such, the operation of the project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations. With respect to the second consistency criterion, the project site is currently zoned PF-1 (Public Facilities) and is also designated as Public Facilities in the South Los Angeles Community Plan. The project's facility would be consistent with the land uses that are allowed under the site's zoning and land use designation. As such, the project is consistent with the underlying zoning and land use designation that are the basis of the population projections in SCAG's RTP, and consequently, the AQMP. Therefore, the project would not have any potential to result in growth that would exceed the projections incorporated into the AQMP or the SCAG 2016–2040 RTP/SCS.

Consistency with City's General Plan Air Quality Element

In addition to the project's consistency with the 2016 AQMP, the project's consistency with the applicable goals, objectives, and policies of the City's General Plan Air Quality Element is also evaluated and shown in Table 2.3-3 below.

Table 2.3-3. Consistency of Project with Applicable Goals, Policies, and Objectives of the City's General Plan Air Quality Element

Goal/Objective/Policy	Project Consistency Assessment
Goal 1: Good air quality and mobility in an environment of continued population growth and healthy economic structure.	**Consistent.** The project would be consistent with SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals and objectives under Senate Bill (SB) 375 to implement "smart growth." The project would add much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the Metropolitan Transportation Authority (MTA) and will seek parking reductions due to its close proximity to MTA train and bus lines.
Objective 1.1: It is the objective of the City of Los Angeles to reduce air pollutants consistent with the Regional Air Quality Management Plan (AQMP), increase traffic mobility, and sustain economic growth citywide.	**Consistent.** As reflected above, the project would be consistent with the SCAG growth projections that are used in preparing the AQMP. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. As such, the project would be supportive of the Transportation Control Measures in the AQMP related to reducing vehicle trips for employees and visitors and residents.
Objective 1.3: It is the objective of the City of Los Angeles to reduce particulate air pollutants emanating from unpaved areas, parking lots, and construction sites.	**Consistent.** The project would implement required control measures for construction-related fugitive dust pursuant to SCAQMD Rule 403. The project would also comply with the applicable provisions of the California Air Resources Board (CARB) Air Toxics Control Measure regarding idling limitations for diesel trucks reducing exhaust diesel particulate matter (DPM) emissions. The project contractor(s) would also be required by state regulations to comply with the fleet on-road heavy duty vehicle emissions standards consistent with Measure MOB-08 from the AQMP. These control strategies are intended to reduce emissions from on-road and off-road heavy-duty vehicles and equipment and are implemented by accelerating the replacement of older engines that produce higher pollutant emissions with newer engines that produce lower pollutant emissions. Additionally, the project would require all diesel-powered off-road equipment greater than 50 hp to meet United States Environmental Protection Act (USEPA) Tier 4 Final standards.
Policy 1.3.1: Minimize particulate emissions from construction sites.	**Consistent.** The project would incorporate measures that would reduce particulate air pollutants from construction activity as described above under Objective 1.3.

Goal/Objective/Policy	Project Consistency Assessment
Policy 1.3.2: Minimize particulate emissions from unpaved roads and parking lots associated with vehicular traffic.	**Consistent.** The project would implement required control measures for construction-related fugitive dust pursuant to SCAQMD Rule 403, which would minimize particulate emissions from unpaved roads and parking areas associated with construction-related vehicular traffic. The project would not include unpaved areas after construction.
Goal 2: Less reliance on single-occupant vehicles with fewer commute and non-work trips.	**Consistent.** The project's land use characteristics would reduce trips and vehicle miles traveled (VMT) due to its urban infill location that includes nearby housing, employment, commercial, and service uses with nearby access to multiple public transit services options.
Objective 2.1: It is the objective of the City of Los Angeles to reduce work trips as a step toward attaining trip reduction objectives necessary to achieve regional air quality goals.	**Consistent.** The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. These project characteristics would reduce trips and encourage residents to utilize alternative modes of transportation.
Policy 2.1.1: Utilize compressed work weeks and flextime, telecommuting, carpooling, vanpooling, public transit, and improve walking/bicycling related facilities in order to reduce vehicle trips and/or VMT as an employer and encourage the private sector to do the same to reduce work trips and traffic congestion.	**Consistent.** The project would add much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide 10 standard and four long-term (enclosed lockers) bike parking. These features would reduce work trips and encourage employees to utilize alternative modes of transportation including public transportation, walking, and bicycling.
Objective 2.2: It is the objective of the City of Los Angeles to increase vehicle occupancy for non-work trips by creating disincentives for single passenger vehicles, and incentives for high occupancy vehicles.	**Consistent.** The project's location would encourage non-automotive transportation to and from the project site. The project would be located within proximity of existing public transportation and would provide onsite bicycle parking for employees and visitors.
Policy 2.2.1: Discourage single-occupant vehicle use through a variety of measures such as market incentive strategies, mode-shift incentives, trip reduction plans and ridesharing subsidies.	**Consistent.** The project would provide ample parking spaces in accordance with Los Angeles Municipal Code (LAMC) requirements, which would encourage non-automotive travel. The project's infill location would encourage non-automotive transportation to and from the project site. The project would be located within proximity of existing public transportation and would provide onsite bicycle parking for building employees and visitors.

Goal/Objective/Policy	Project Consistency Assessment
Policy 2.2.2: Encourage multi-occupant vehicle travel and discourage single-occupant vehicle travel by instituting parking management practices.	**Consistent.** The project would include bicycle parking spaces in accordance with LAMC requirements, which would encourage non-automotive travel. The project's infill location would encourage non-automotive transportation to and from the project site. The project would be located within proximity of existing public transportation and would provide onsite bicycle parking for building residents, employees, and visitors. .
Goal 4: Minimal impact of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality.	**Consistent.** The project would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. The project's design and location would help to improve air quality and the well-being of people as they would have greater opportunities for pedestrian and bicycling activity and to reduce their reliance on automobiles.
Policy 4.2.2: Improve accessibility for the City's residents to places of employment, shopping centers and other establishments.	**Consistent.** The project would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in south Los Angeles. The project is located an urban area surrounded by commercial, residential, restaurant, and service uses.
Policy 4.2.3: Ensure that new development is compatible with pedestrians, bicycles, transit, and alternative fuel vehicles.	**Consistent.** The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four electronic vehicle (EV) charging spaces. These features would reduce work trips and encourage employees to utilize alternative modes of transportation including public transportation, walking, and bicycling.

Goal/Objective/Policy	Project Consistency Assessment
Policy 4.2.5: Emphasize trip reduction, alternative transit, and congestion management measures for discretionary projects.	**Consistent.** The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four EV charging spaces. These features would reduce work trips and encourage employees to utilize alternative modes of transportation including public transportation, walking, and bicycling.
Goal 5: Energy efficiency through land use and transportation planning, the use of renewable resources and less polluting fuels, and the implementation of conservation measures, including passive methods such as site orientation and tree planting.	**Consistent.** To achieve Leadership in Energy and Environmental Design (LEED) Silver certification, energy saving and sustainable design would be incorporated throughout the project. As part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens. The project facility will be outfitted with the latest technology to help reduce the transmission of airborne viruses to ensure the safety of patrons. Equipment systems and design criteria such as, but not limited to, on demand air purge systems, ultraviolet (UV) filtration of circulated air, social distanced waiting areas, and body temperature checkpoints will be incorporated into the final design.
Objective 5.1: It is the objective of the City of Los Angeles to increase energy efficiency of City facilities and private developments.	**Consistent.** To achieve LEED Silver certification, energy saving and sustainable design would be incorporated throughout the project. The project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.
Policy 5.1.2: Effect a reduction in energy consumption and shift to non-polluting sources of energy in its buildings and operations.	**Consistent.** As noted previously, project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens. The project facility will be outfitted with the latest technology to help reduce the transmission of airborne viruses to ensure the safety of patrons. Equipment systems and design criteria such as, but not limited to, on demand air purge systems, UV filtration of circulated air, social distanced waiting areas, and body temperature checkpoints will be incorporated into the final design.

Goal/Objective/Policy	Project Consistency Assessment
Policy 5.1.4: Reduce energy consumption and associated air emissions by encouraging waste reduction and recycling.	**Consistent.** The project would implement a construction waste management plan to divert all mixed construction and demolition debris to City certified construction and demolition waste processors, consistent with the Los Angeles City Council approved Council File 09-3029. During operations, the project would be served by a solid waste collection and recycling service under the City's recycLA program, which offers recycling and organic waste recycling to businesses and large multi-family customers.
Policy 5.3.1: Support the development and use of equipment powered by electric or low-emitting fuels.	**Consistent.** As noted previously, the project would incorporate energy saving and sustainable design throughout the project to achieve LEED Silver certification. The project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.

As discussed in Table 2.3-3, the construction and operation of the project would not conflict with or be inconsistent with applicable air quality policies of the General Plan.

Project Construction

Regional Emissions

Construction associated with the project would generate criteria pollutant emissions from the following activities: demolition; site preparation; grading and excavation; construction workers traveling to and from project site; delivering construction supplies to, and hauling debris from, the project site; fuel combustion by onsite construction equipment; and building construction, the application of architectural coatings, and paving activities. These construction activities have the potential to temporarily create emissions of dust, fumes, equipment exhaust, and other air contaminants. The amount of emissions generated on a daily basis would vary, depending on the intensity and types of construction activities occurring simultaneously. To provide the most conservative analysis, maximum daily emissions estimates, which are used to assess project impacts, are based on the day with the greatest intensity of construction activities.

For purposes of this air quality analysis, construction of the project is anticipated to commence in April 2022 and continue over an approximately 11-month period before ending in March 2023. Table 2.3-4 presents the construction phases and estimated durations assumed for purposes of this analysis. Actual construction timing may vary depending on market conditions at the time of construction.

Table 2.3-4. Anticipated Project Construction Schedule

Phases	Start (month/date/year)	Finish (month/date/year)	Duration (workdays)
Demolition	4/11/2022	4/15/2022	5
Site Preparation	4/18/2022	4/22/2022	5
Grading	4/25/2022	5/20/2022	20
Building Construction	5/23/2022	2/1/2023	183
Paving	2/2/2023	3/1/2023	20

Construction would require the removal of approximately 20,000 cubic yards of material throughout the demolition, site preparation, and grading phases. Removal of this material would require approximately 42 haul truck round trips per day. Aside from haul truck trips, daily vendor/material delivery truck trips would also occur during each of the construction phases for the project.

As discussed previously, the project would implement **BMP-AQ-1** during construction to minimize construction-related emissions. Measures under **BMP-AQ-1** that would reduce pollutant emissions include watering exposed ground and having off-road equipment meet cleaner engine standards. The modeled peak daily emissions of criteria air pollutants and ozone precursors associated with construction of the project with **BMP-AQ-1** are presented in Table 2.3-5. As shown therein, the maximum level of daily construction emissions generated by the project with implementation of **BMP-AQ-1** would not exceed SCAQMD's daily significance thresholds for any criteria pollutants during any of the construction phases.

Table 2.3-5. Regional Criteria Pollutant Construction Emissions With BMP-AQ-1

Localized Emissions

To assess the potential localized air quality impacts resulting from the project on nearby sensitive receptors during construction, the daily onsite construction emissions generated at the project site were evaluated against SCAQMD's applicable construction LSTs for a 2.3-acre site. The nearest sensitive receptor to the project site is an existing single-family residence east of the project site that

is located approximately 65 feet away. Other single- and multi-family residential uses surrounding the project site are also located at greater distances.

Because the mass rate look-up tables provided by SCAQMD provide only LSTs at receptor distances of 82, 164, 328, 656, and 1,640 feet, the LSTs for a receptor distance of 82 feet were used to evaluate the potential localized air quality impacts associated with the project's peak-day construction emissions.[2] This distance most closely corresponds to the distance from the project site to nearby sensitive receptors in the SCAQMD LST lookup tables.

As discussed previously, the project would implement **BMP-AQ-1** during construction to minimize construction-related emissions. The localized onsite emissions that are estimated to occur during peak construction days during the project's construction schedule with **BMP-AQ-1** are presented in Table 2.3-6. As shown in Table 2.3-6, daily emissions generated onsite by construction of the project would not exceed any of the applicable SCAQMD LSTs for a 2.3-acre site in SRA 1 over the course of the entire construction schedule.

Table 2.3-6. Localized Criteria Pollutant Construction Emissions With BMP-AQ-1[a]

	Estimated Maximum Daily On-site Emissions (pounds per day)[b]

Toxic Air Contaminants

As discussed previously, DPM is classified as a carcinogenic TAC by CARB and is the primary pollutant of concern with regard to health risks to sensitive receptors during project construction. Diesel-powered construction equipment as well as heavy duty truck movement and hauling would emit DPM that could potentially expose nearby sensitive receptors to pollutant concentrations. Construction emissions would be temporary and short-term in nature with a construction duration of approximately 11 months. Project-generated DPM emissions would cease upon completion of construction. With implementation of **BMP-AQ-1**, DPM emissions from off-road equipment would be reduced significantly from the use of Tier 4 Final engines for equipment greater than 50 hp. Overall,

[2] According to SCAQMD's LST methodology, it is recommended that projects with boundaries closer than 82 feet (25 meters) from the nearest receptor use the LSTs for receptors located at 82 feet.

construction would not expose sensitive receptors to substantial concentrations of DPM and the risk of adverse health effects during the construction period would be minimal.

Odors

During construction of the project, exhaust from equipment, activities associated with the application of architectural coatings and other interior and exterior finishes, and paving activities may produce discernible odors typical of most construction sites. Such odors would be, at worst, a temporary source of nuisance to adjacent uses, if at all, and would not affect a substantial number of people. The project would use architectural coatings compliant with SCAQMD Rule 1113, which would limit the odors associated with off-gassing from those coatings. Odors associated with asphalt paving would only occur for a limited time period for the project and the locations of paving activities would be distributed at the project site. Additionally, material deliveries and heavy-duty haul truck trips could occasionally produce odors from diesel exhaust. These odors would not affect a substantial number of people because construction would be temporary, and construction-generated emissions dissipate rapidly with increasing distance from the source. Overall, odors associated with project construction would be temporary and intermittent in nature, and would not create a significant level of objectionable odors affecting a substantial number of people.

Project Operations

Regional Emissions

Implementation of the project would result in long-term regional emissions of criteria air pollutants and ozone precursors associated with energy sources (natural gas consumption), area sources (landscaping activities, re-applications of architectural coatings, and use of consumer products), emergency generator testing, and mobile sources. According to the Transportation Assessment Memorandum prepared for the project, development of the project would result in a total net increase of 514 daily vehicle trips over existing baseline conditions (Fehr & Peers 2021).

Table 2.3-7 presents the daily operational emissions generated by the project. As shown, the project would result in long-term regional emissions of criteria air pollutants and ozone precursors that would be below SCAQMD's applicable thresholds.

Table 2.3-7. Proposed Project Criteria Pollutant Operational Emissions

Localized Emissions

Similar to the analysis of construction emissions, the daily amount of localized pollutant emissions generated onsite by the project during operations was also assessed for its potential localized air quality impacts on nearby sensitive receptors. The operational emissions that would result from the project were assessed against SCAQMD's applicable operational LSTs for a 2.3-acre site, as explained previously. Table 2.3-8 presents the onsite operational emissions that would result from the project. As shown, the project's operations-related emissions generated onsite would not exceed SCAQMD's applicable operational LSTs.

Table 2.3-8. Localized Criteria Pollutant Operational Emissions

CO=carbon monoxide; LST= localized significance threshold; NO_X=nitrous oxides; PM_{10}=particulate matter less than 10 microns; $PM_{2.5}$= particulate matter less than 2.5 microns

Toxic Air Contaminants

Typical sources of acutely and chronically hazardous TACs include industrial manufacturing processes, automotive repair facilities, and dry-cleaning facilities. As the project consists of a recreation center, the project would not include sources of substantive TAC emissions identified by the SCAQMD or CARB. Project operation would generate minimal amounts of TACs from emergency generator testing, use of consumer products, periodic use of fuel-powered landscaping equipment, and from other activities associated with recreation center uses such as cleaning and reapplication of architectural coatings. However, these emissions are expected to be occasional and result in minimal exposure to offsite sensitive receptors. Thus, operation of the project would not have an adverse health effect on a substantial number of people.

Odors

According to the SCAQMD *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment facilities, food processing plants, chemical

plants, composting areas, refineries, landfills, dairies, and fiberglass molding facilities. The project is a recreations center and would not be associated with any of these land uses. Project operation would also entail the onsite collection of trash from employees and visitors, which may involve odors, but which would be collected regularly such that odors would not affect a substantial number of people. Thus, operation of the project is not expected to result in objectionable odors for the neighboring uses and would not adversely affect a substantial number of people.

Carbon Monoxide Hot Spots

A CO hot spot is a localized concentration of CO that is above the state or national 1-hour or 8-hour ambient air standards for the pollutant. CO hot spots at roadway intersections are typically found in areas with significant traffic congestion. CO is a public health concern because at high enough concentrations, it can cause health problems such as fatigue, headache, confusion, dizziness, and even death. However, it should be noted that ambient concentrations of CO have declined dramatically in California because of existing controls and programs.

Most areas of the state, including the region in which the project is located in, meet the state and federal CO standards (CARB 2004). As part of SCAQMD's 2003 AQMP, which is the most recent AQMP that addresses CO concentrations, a revision to the Federal Attainment Plan for Carbon Monoxide (CO Plan) that was originally approved in 1992 was provided that included a CO hot spots analysis at four specified heavily traveled intersections in Los Angeles at the peak morning and afternoon time periods. These four intersection locations selected for CO modeling are considered to be worst-case intersections that would likely experience the highest CO concentrations. The CO hot spots analysis in the 2003 AQMP did not predict a violation of CO standards at the four intersections. Of these four intersections, the busiest intersection evaluated was that at Wilshire Boulevard and Veteran Avenue, which was described as the most heavily congested intersection in Los Angeles County with an average daily traffic volume of approximately 100,000 vehicles per day. Based on the CO modeling, the 2003 AQMP estimated that the 1-hour and 8-hour concentrations at this intersection was 4.6 ppm and 3.5 ppm, respectively, which would not exceed the most stringent 1-hour CO standard of 20.0 ppm and 8-hour CO standards of 9 ppm. Based on peak hour traffic volumes provided by the project's traffic engineer at the intersections nearest to the project site, it was determined that at buildout (2023) the highest daily traffic volumes generated at an intersection within the vicinity of the project would be an estimated cumulative total of 83,880 vehicles per day at the intersection of Slauson Avenue and Normandie Avenue.[3] Because the daily amount of vehicles at this study intersection would not exceed 100,000 vehicles per day, it can be concluded that the project would not exceed the most stringent 1-hour and 8-hour CO standards and no detailed CO hot spots analysis for the project would be required. Therefore, the project would not result in impacts related to CO hot spots, and would not contribute a significant level of CO such that localized air quality and human health would be substantially degraded.

[3] Daily intersection volumes were estimated by assuming that vehicle volumes at the PM peak hour would represent 10 percent of total daily volumes.

Chapter 3
Greenhouse Gases and Climate Change

3.1 Existing Setting

3.1.1 Global Climate Change

The phenomenon known as the greenhouse effect keeps the atmosphere near Earth's surface warm enough for the successful habitation of humans and other life forms. The greenhouse effect is created by sunlight that passes through the atmosphere. Some of the sunlight striking Earth is absorbed and converted to heat, which warms the surface. The surface emits a portion of this heat as infrared radiation, some of which is re-emitted toward the surface by GHGs. Human activities that generate GHGs increase the amount of infrared radiation absorbed by the atmosphere, thus enhancing the greenhouse effect and amplifying the warming of Earth.

Increases in fossil fuel combustion and deforestation have exponentially increased concentrations of GHGs in the atmosphere since the Industrial Revolution (IPCC 2007). Rising atmospheric concentrations of GHGs in excess of natural levels result in increasing global surface temperatures—a phenomenon commonly referred to as global warming. Higher global surface temperatures, in turn, result in changes to Earth's climate system, including increased ocean temperature and acidity, reduced sea ice, variable precipitation, and increased frequency and intensity of extreme weather events (IPCC 2018). Large-scale changes to Earth's system are collectively referred to as climate change.

The Intergovernmental Panel on Climate Change (IPCC) was established by the World Meteorological Organization and United Nations Environment Programme to assess scientific, technical, and socioeconomic information relevant to the understanding of climate change, its potential impacts, and options for adaptation and mitigation. The IPCC estimates that human-induced warming reached approximately 1 degree Celsius (°C) above pre-industrial levels in 2017, increasing at 0.2°C per decade. Under the current nationally determined contributions of mitigation from each country until 2030, global warming is expected to rise to 3°C by 2100, with warming to continue afterwards (IPCC 2018). Large increases in global temperatures could have substantial adverse effects on the natural and human environments worldwide and in California.

3.1.2 Principal Greenhouse Gases

The principle anthropogenic (human-made) GHGs listed by the IPCC that contribute to global warming are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated compounds, including sulfur hexafluoride (SF_6), HFCs), and perfluorocarbons (PFCs). Water vapor, the most abundant GHG, is not included in this list because its natural concentrations and fluctuations far outweigh its anthropogenic sources.

The primary GHGs of concern associated with the project are CO_2, CH_4, and N_2O. Principal characteristics of these pollutants are discussed below.

- **Carbon dioxide (CO_2)** enters the atmosphere through fossil fuels (e.g., oil, natural gas, coal) combustion, solid waste decomposition, plant and animal respiration, and chemical reactions (e.g., manufacture of cement). CO_2 is also removed from the atmosphere (or *sequestered*) when it is absorbed by plants as part of the biological carbon cycle.
- **Methane (CH_4)** is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from livestock and other agricultural practices and from the decay of organic waste in municipal solid waste landfills.
- **Nitrous oxide (N_2O)** is emitted during agricultural and industrial activities, as well as during combustion of fossil fuels and solid waste.

Methods have been set forth to describe emissions of GHGs in terms of a single gas to simplify reporting and analysis. The most commonly accepted method to compare GHG emissions is the global warming potential (GWP) methodology defined in IPCC reference documents. IPCC defines the GWP of various GHG emissions on a normalized scale that recasts all GHG emissions in terms of carbon dioxide equivalent (CO_2e), which compares the gas in question to that of the same mass of CO_2 (by definition, CO_2 has a global warming potential of 1). The GWP values used in this report are based on the IPCC Fourth Assessment Report (AR4) and United Nations Framework Convention on Climate Change reporting guidelines (IPCC 2007). The AR4 GWP values are consistent with those used in CARB's most recent GHG inventory and the 2017 Scoping Plan Update.

Table 3.1-1 lists the global warming potential of CO_2, CH_4, and N_2O and their lifetimes in the atmosphere.

Table 3.1-1. Lifetimes and Global Warming Potentials of Key Greenhouse Gases

Greenhouse Gas	Global Warming Potential (100 years)	Lifetime(years)[a]
CO_2	1	50–200
CH_4	25	9–15
N_2O	298	121

Source: CARB 2021a, IPCC 2001.
[a] Defined as the half-life of the gas.
CH_4=methane; CO_2=carbon dioxide; N_2O=nitrous oxide

GHGs are global pollutants, unlike criteria air pollutants and TACs. Criteria air pollutants and TACs occur locally or regionally, and local concentrations respond to locally implemented control measures. However, the long atmospheric lifetimes of GHGs allow them to be transported great distances from sources and become well mixed, unlike criteria air pollutants, which typically exhibit strong concentration gradients away from point sources. GHGs and global climate change represent cumulative impacts; that is, GHG emissions contribute, on a cumulative basis, to the significant adverse environmental impacts of global climate change.

3.1.3 Statewide Greenhouse Gas Emissions Trends

A GHG inventory is a quantification of all GHG emissions and sinks[4] within a selected physical and/or economic boundary. GHG inventories can be performed on a large scale (e.g., for global and

[4] A *GHG sink* is a process, activity, or mechanism that removes a GHG from the atmosphere.

national entities) or on a small scale (e.g., for a building or person). Although many processes are difficult to evaluate, several agencies have developed tools to quantify emissions from certain sources.

CARB has prepared a statewide emissions inventory covering 2000 to 2018. In 2018, GHG emissions within California totaled approximately 425 million metric tons of CO_2e (CARB 2020c). Within California, the transportation sector is the largest contributor, accounting for approximately 41 percent of the total state-wide GHG emissions. The industrial sector is the second largest contributor to GHG emissions in California, with 24 percent. Since the peak level in 2004, California's GHG emissions have generally followed a decreasing trend. The largest reductions in GHG emissions have come from the electricity sector, which continues to decrease as a result of the state's climate policies that has led to a growth in wind generation and solar power. Table 3.1-2 shows statewide GHG emission estimates from 2007 to 2018 in California. Note that the 2020 target (1990 levels) is 426.6 million metric tons of CO_2e ($MMTCO_2e$) whereas the 2030 target (40 percent below 1990 levels) is currently set at 260 $MMTCO_2e$.

GWP=global warming potential

3.2 Regulatory Framework

3.2.1 Federal

Historically, GHGs were not directly regulated under the FCAA. However, the 2007 ruling by the Supreme Court of the United States in *Massachusetts v. EPA* found that USEPA may regulate GHGs if they are determined to be a danger to human health. In response, President George W. Bush ordered USEPA to use its existing authority under the FCAA to regulate GHGs from mobile sources.

USEPA issued its so-called Endangerment Finding in December 2009, which found that six GHGs do threaten the health and welfare of current and future generations. For mobile sources, the Endangerment Finding led to development of the Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards Rule (LDV Rule) by USEPA and the

National Highway Traffic Safety Administration in May 2010. The LDV rule first applied to model years 2012–2017 but was later extended to the 2025 model year. It requires light-duty vehicles to comply with progressively more stringent GHG emission standards for the 2012–2025 model years. For stationary sources, the Endangerment Finding led to the so-called Tailoring Rule in May 2010, which tailored permit trigger levels to the largest sources.

USEPA phased in GHG permitting requirements for stationary sources for the period from 2010 to 2014. However, the Supreme Court of the United States decision on June 23, 2014, in *Utility Air Regulatory Group v. EPA*, limited the applicability of GHG requirements to large sources that are already subject to major-source permitting under the FCAA because of other pollutants. USEPA also developed New Source Performance Standards, which cover GHGs associated with power plants and certain oil and gas sources. In addition, the agency maintains an annual GHG reporting program that covers multiple industrial sectors. However, none of the current FCAA requirements for GHGs are expected to directly affect the proposed project.

USEPA adopted a Mandatory Reporting Rule and Clean Power Plan, which issued regulations to control CO_2 emissions from new and existing coal-fired power plants. However, on February 9, 2016, the Supreme Court issued a stay for these regulations pending litigation. Former USEPA Administrator Scott Pruitt also signed a measure to repeal the Clean Power Plan in October 2017. Therefore, there is currently no overarching federal law related specifically to climate change or a reduction in GHG emissions.

3.2.2 State

California has adopted statewide legislation addressing various aspects of climate change, GHG mitigation, and energy efficiency. Much of this establishes a broad framework for the state's long-term GHG and energy reduction goals and climate change adaptation program. The former and current governor(s) of California have also issued several Executive Orders (EOs) related to the state's evolving climate change policy. Summaries of key policies, EOs, regulations, and legislation at the state level that are relevant to the project are provided below in chronological order.

3.2.3 Assembly Bill 1493—Pavley Rules (2002, amendments 2009)/Advanced Clean Cars (2011)

Known as Pavley I, AB 1493 provided the nation's first GHG standards for automobiles. AB 1493 required CARB to adopt vehicle standards that will lower GHG emissions from new light-duty autos to the maximum extent feasible beginning in 2009. Additional strengthening of the Pavley standards (referred to previously as *Pavley II* and now referred to as the *Advanced Clean Cars* [ACC] measure) was adopted for vehicle model years 2017–2025 in 2012. Together, the two standards are expected to increase average fuel economy to roughly 54.5 miles per gallon in 2025.

3.2.4 Senate Bills 1078/107/X 1-2—Renewables Portfolio Standard and Renewable Energy Resources Act (2002, 2006, 2011)

SBs 1078 and 107, California's Renewables Portfolio Standard (RPS), obligated investor-owned utilities, energy service providers, and Community Choice Aggregations to procure an additional 1 percent of retail sales per year from eligible renewable sources until 20 percent is reached by 2010. The California Public Utilities Commission and California Energy Commission (CEC) are jointly responsible for implementing the program. SB X 1-2, called the California Renewable Energy Resources Act, obligates all California electricity providers to obtain at least 33 percent of their energy from renewable resources by 2020. As noted below, SB 350 increased the RPS to 50 percent for 2030, and SB100 increased the RPS to 100 percent by 2045.

3.2.5 Executive Order S-03-05 (2005)

EO S-3-05 stated that California is vulnerable to the effects of climate change. To combat this concern, the order established the following GHG emissions reduction targets:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

Executive orders are legally binding only on state agencies. Accordingly, EO S-3-05 guides state agencies' efforts to control and regulate GHG emissions but has no direct, binding effect on local government or private actions. The secretary of the California Environmental Protection Agency is required to report to the governor and state legislature biannually regarding the impacts of global warming on California, mitigation and adaptation plans, and progress made toward reducing GHG emissions and meeting the targets established in EO S-3-05.

3.2.6 Assembly Bill 32—California Global Warming Solutions Act (2006)

AB 32 codified the state's GHG emissions target by requiring California's global warming emissions to be reduced to 1990 levels by 2020. Since being adopted, CARB, CEC, the California Public Utilities Commission, and the California Building Standards Commission have been developing regulations that will help the state meet the goals of AB 32 and EO S-03-05. The scoping plan for AB 32 identifies specific measures to reduce GHG emissions to 1990 levels by 2020 and requires CARB and other state agencies to develop and enforce regulations and other initiatives to reduce GHG emissions. The AB 32 Scoping Plan, first adopted in 2008, comprises the state's roadmap for meeting AB 32's reduction target. Specifically, the scoping plan articulates a key role for local governments by recommending that they establish GHG emissions-reduction goals for both their municipal operations and the community that are consistent with those of the state (i.e., approximately 15 percent below 2005 levels by 2020) (CARB 2008).

CARB re-evaluated its emissions forecast in light of the economic downturn since 2008 and updated the projected 2020 emissions to 545 $MMTCO_2e$. Two reduction measures (Pavley I and RPS [12–20 percent]) that were not previously included in the 2008 scoping plan baseline were incorporated into the updated baseline, further reducing the 2020 statewide emissions projection to 507 $MMTCO_2e$. The updated forecast of 507 $MMTCO_2e$ is referred to as the AB 32 2020 baseline. An estimated reduction of 80 $MMTCO_2e$ is necessary to lower statewide emissions to the AB 32 target of 427 million $MTCO_2e$ by 2020 (CARB 2014).

CARB approved the *First Update to the Scoping Plan* (First Update) on May 22, 2014 (CARB 2014). The First Update includes both a 2020 element and a post-2020 element. The 2020 element focuses on the state, regional, and local initiatives that are being implemented now to help the state meet the 2020 goal.

On December 14, 2017, CARB approved the *2017 Climate Change Scoping Plan Update* (referred to as 2017 Scoping Plan herein), which is the proposed strategy for achieving California's 2030 GHG emissions target. In addition to building on established programs, such as cap-and-trade regulation, and the low-carbon fuel standard (LCFS), the update addresses, for the first time, GHG emissions related to agriculture and forestry in California (CARB 2017).

3.2.7 Executive Order S-01-07—Low Carbon Fuel Standard (2007)

EO S-01-07, the LCFS, mandates (1) that a statewide goal be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020, with a reduction in the carbon content of fuel by a quarter of a percent starting in 2011, and (2) that a low carbon fuel standard for transportation fuels be established in California. CARB approved the LCFS on April 23, 2009, and the regulation became effective on January 12, 2010. The U.S. District Court for the Eastern District of California ruled in December 2011 that the LCFS violates the Commerce Clause of the U.S. Constitution. CARB appealed this ruling in 2012, and on September 18, 2013, the United States Court of Appeals for the Ninth Circuit upheld the LCFS, ruling that the program does not violate the Commerce Clause and remanded the case to the Eastern District. In September 2018, the LCFS regulation was amended to increase the statewide goal to a 20-percent reduction in carbon intensity of California's transportation fuels by at least by 2030.

3.2.8 Senate Bill 375 (2008)

SB 375, signed into law by Governor Schwarzenegger on September 30, 2008, became effective January 1, 2009. This law requires the state's 18 Metropolitan Planning Organizations to develop the SCS as part of their RTPs through integrated land use and transportation planning, and to demonstrate an ability to attain the GHG emissions reduction targets that the CARB established for the region by 2020 and 2035. This would be accomplished through either the financially constrained SCS as part of the RTP or an unconstrained alternative planning strategy. If regions develop integrated land use, housing, and transportation plans that meet the SB 375 targets, new projects in these regions can be relieved of certain CEQA review requirements.

3.2.9 Assembly Bill 341 (2011)

In 2011, AB 341 modified the California Integrated Waste Management Act and directed CalRecycle to develop and adopt regulations for mandatory commercial recycling. The resulting Mandatory Commercial Recycling Regulation (2012) requires that on and after July 1, 2012, certain businesses that generate 4 cubic yards or more of commercial solid waste per week or is a multifamily residential dwelling of five units or more must arrange recycling services. To comply with this requirement, businesses may either separate recyclables and self-haul them or subscribe to a recycling service that includes mixed waste processing. AB 341 also established a statewide recycling goal of 75 percent by 2020.

3.2.10 Senate Bill 1383 (2013)

SB 1383, adopted in 2013, requires CARB to develop and implement a Short-Lived Climate Pollutant (SLCP) Strategy with the following 2030 goals: 40 percent reduction in methane; 40 percent reduction in hydrofluorocarbon (HFC) gases; and 50 percent reduction in anthropogenic black carbon. Per its directive, CARB adopted the SLCP Strategy, establishing a path to decrease SLCPs from various sectors of the economy. Strategies span from wastewater and landfill practices and methane recovery to reducing natural gas leaks and consumption. The SLCP strategy also identifies measures that can reduce HFC emissions through incentive programs and limitations on the use of high-GWP refrigerants in new refrigeration and air-conditioning equipment.

3.2.11 Executive Order B-30-15 (2015)

Governor Jerry Brown signed EO B-30-15 on April 29, 2015. EO B-30-15 established a medium-term goal for 2030 of reducing GHG emissions by 40 percent below 1990 levels and requires the CARB to update its current AB 32 Scoping Plan to identify measures to meet the 2030 target. The EO B-30-15 supports EO S-3-05, but is only binding on state agencies.

3.2.12 Senate Bill 350 (2015)

SB 350 (De León, also known as the Clean Energy and Pollution Reduction Act of 2015) was approved by the California legislature in September 2015 and signed by Governor Brown in October 2015. Its key provisions are to require the following by 2030: (1) an RPS of 50 percent and (2) a doubling of efficiency for existing buildings.

3.2.13 Senate Bill 32, California Global Warming Solutions Act of 2006: Emissions Limit, and Assembly Bill 197, State Air Resources Board, Greenhouse Gases, Regulations (2016)

SB 32 (Pavley) bill requires CARB to ensure that statewide GHG emissions are reduced to at least 40 percent below the 1990 level by 2030, consistent with the target set forth in EO B-30-15. The bill specifies that SB 32 shall become operative only if AB 197 (Garcia) is enacted and becomes effective on or before January 1, 2017. AB 197 creates requirements to form the Joint Legislative Committee on Climate Change Policies; requires CARB to prioritize direct emission reductions from stationary

sources, mobile sources, and other sources and consider social costs when adopting regulations to reduce GHG emissions beyond the 2020 statewide limit; requires CARB to prepare reports on sources of GHGs, criteria air pollutants, and toxic air contaminants; establishes 6-year terms for voting members of CARB; and adds two legislators as non-voting members of CARB. Both bills were signed by Governor Brown in September 2016.

CARB approved the 2017 Scoping Plan Update in December 2017, which builds on the programs set in place as part of the previous Scoping Plan that was drafted to meet the 2020 reduction targets per AB 32. The 2017 Scoping Plan Update proposes meeting the 2030 goal by accelerating the focus on zero and near-zero technologies for moving freight, continued investment in renewables, greater use of low-carbon fuels including electricity and hydrogen, stronger efforts to reduce emissions of short-lived climate pollutants (e.g., CH_4, black carbon, fluorinated gases), further efforts to create walkable communities with expanded mass transit and other alternatives to traveling by car, continuing the cap-and-trade program, and ensuring that natural lands become carbon sinks to provide additional emissions reductions and flexibility in meeting the target. The Scoping Plan Update also recommends that local governments aim to achieve community-wide efficiency of 6 $MTCO_2e$ per capita by 2030 and 2 $MTCO_2e$ per capita by 2050 to be used in local climate action planning. These efficiency targets would replace the "15 percent from 2008 levels by 2020" approach recommended in the initial Scoping Plan, which would allow for local governments to grow in a sustainable manner (CARB 2016).

3.2.14 Senate Bill 100 (2018)

SB 100 (De León, also known as the "California Renewables Portfolio Standard Program: emissions of greenhouse gases") was approved by the California legislature and signed by Governor Brown in September 2018. The bill increases RPS in 2030 from 50 percent to 60 percent and establishes a goal of 100 percent RPS by 2045. SB 100 is a legislative action that was signed into law after the 2017 Scoping Plan was adopted. The Scoping Plan modeling is based on the SB 350 target of 50 percent renewables by 2030. However, the new SB 100 target of 60 percent renewables by 2030 and 100 percent renewables by 2045 supersede the goals of SB 350 and will be included in future Scoping Plan updates.

3.2.15 Executive Order B-55-18 (2018)

EO B-55-18 was approved by the California legislature and signed by Governor Brown in September 2018. EO B-55-18 acknowledges the environmental, community, and public health risks posed by future climate change. It further recognizes the climate stabilization goal adopted by 194 states and the European Union under the Paris Agreement. Although the United States was not party to the agreement, California is committed to meeting the Paris Agreement goals and going beyond them wherever possible. Based on the worldwide scientific agreement that carbon neutrality must be achieved by midcentury, EO B-55-18 establishes a new state goal to achieve carbon neutrality as soon as possible, and no later than 2045, and to achieve and maintain net negative emissions thereafter. The EO charges the CARB with developing a framework for implementing and tracking progress toward these goals. This EO extends EO S-3-05, but is only binding on state agencies. However, given this directive, it is likely that the carbon neutral goal by 2045 will make its way into future updates to the Scoping Plan, which must be updated every 5 years.

3.2.16 Green Building Code and Title 24 Updates

The California Green Building Standards (CALGreen) Code (proposed Part 11, Title 24) was adopted as part of the California Building Standards Code (24 CCR). Part 11 established voluntary standards that became mandatory under the 2010 edition of the code. These involved sustainable site development, energy efficiency (in excess of CEC requirements), water conservation, material conservation, and internal air contaminants. The current energy efficiency standards were adopted in 2018 and took effect on January 1, 2020. The CEC is responsible for adopting, implementing, and updating the standards every three years.

3.2.17 Regional

3.2.18 South Coast Air Quality Management District

As discussed previously in Chapter 2.2, *Regulatory Framework*, of this report, the SCAQMD has primary responsibility for development and implementation of rules and regulations to attain NAAQS and CAAQS as well as permitting new or modified sources, developing air quality management plans, and adopting and enforcing air pollution regulations within the Basin. CARB's Scoping Plans do not provide an explicit role for local air districts with respect to implementing the reduction goals of SB 32 and AB 32, but CARB does state that they will work actively with air districts in coordinating emissions reporting, encouraging, and coordinating GHG reductions, and providing technical assistance in quantifying reductions. The ability of air districts to control emissions (both criteria pollutants and GHGs) is provided primarily through permitting but also through their role as a CEQA lead or commenting agency, the establishment of CEQA thresholds, and the development of analytical requirements for CEQA documents.

On December 5, 2008, SCAQMD Governing Board considered draft GHG guidance, and adopted a staff proposal for an interim GHG significance threshold of 10,000 $MTCO_2e$ per year for industrial permitting projects where SCAQMD is the lead agency. The board letter, resolution, interim GHG significance threshold, draft guidance document, and attachments can be found under Board Agenda Item 31 of the December 5, 2008, Governing Board Meeting Agenda (SCAQMD 2008b). In its draft guidance document, SCAQMD included evidence and rationale for developing thresholds, specifically citing CEQA Guidelines Section 15064.7(a) *("each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects"*) and Subsection (b) (*"Thresholds of significance to be adopted for general use as part of the lead agency's environmental review process must be adopted by ordinance, resolution, rule or regulation, and developed through a public review process and be supported by substantial evidence"*). SCAQMD developed thresholds for both stationary sources as well as for land use development projects. SCAQMD's recommended GHG significance threshold underwent a public review process as part of stakeholder working group meetings that were open to the public. The draft guidance document provides the supporting analysis and methodology for developing the GHG significance thresholds for both stationary sources as well as for land use development projects. After completion of the public process, the proposed interim thresholds for land use development projects were brought to the SCAQMD's Governing Board but were not formally adopted, whereas the threshold involving industrial permitting projects where SCAQMD is lead agency was adopted.

For industrial process, the SCAQMD has formally adopted a 10,000 $MTCO_2e$ threshold for industrial (permitted) facilities where SCAQMD is the lead agency. This industrial source threshold is not appropriate for use on residential, commercial, or mixed-use projects such as the project, since it is not associated with industrial processes.

SCAQMD noted that the proposed interim GHG significance thresholds for evaluation of land use development projects was only a recommendation for lead agencies and not a mandatory requirement. The GHG significance threshold may be used at the discretion of the local lead agency. The draft GHG guidance identified a tiered approach for determining the significance of GHG emissions, one of which included the use of numerical screening thresholds. With respect to numerical GHG significance thresholds, the SCAQMD proposed two different approaches to be taken by lead agencies when analyzing GHG emissions:

- **Option #1** includes using separate numerical thresholds for residential projects (3,500 $MTCO_2e$/year), commercial projects (1,400 $MTCO_2e$/year), and mixed-use projects (3,000 $MTCO_2e$/year).
- **Option #2** is use of a single numerical threshold for all non-industrial projects of 3,000 $MTCO_2e$/year. SCAQMD's most recent recommendation per its September 2010 meeting minutes is to use option #2.

However, these numerical thresholds have not been adopted by SCAQMD.

3.2.19 Southern California Association of Governments (SCAG) 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy

SCAG is the Metropolitan Planning Organization (MPO) for the six-county region that includes Los Angeles, Orange, Riverside, Ventura, San Bernardino, and Imperial counties. The 2020–2045 RTP/SCS includes commitments to reduce emissions from transportation sources to comply with SB 375, AB 32, and SB 32. Goals and policies included in the 2020–2045 RTP/SCS to reduce GHG emissions consist of adding density in proximity to transit stations, mixed-use development and encouraging active transportation (i.e., non-motorized transportation such as bicycling).

SB 375 requires CARB to develop regional CO_2 emission reduction targets, compared to 2005 emissions, for cars and light trucks only for 2020 and 2035 for each MPO. SB 375 also requires that each MPO prepare an SCS as part of the RTP to reduce CO_2 by better aligning transportation, land use, and housing. For SCAG, the SCS targets require SCAG to reduce per capita emissions eight percent below 2005 levels by 2020 and 19 percent below 2005 levels by 2035 (SCAG 2020a). The 2020–2045 RTP/SCS states that the region will meet the SB 375 per capita targets.

3.2.20 Local

3.2.21 Sustainable City pLAn

Under Mayor Eric Garcetti, the City of Los Angeles released its first-ever Sustainable City pLAn (pLAn) on April 8, 2015 (City of Los Angeles 2015). Recognizing the risks posed by climate change,

the pLAn set time-bound outcomes on climate action, most notably to reduce GHG emissions by 45 percent by 2025, 60 percent by 2035, and 80 percent by 2050, all against a 1990 baseline. Through the completion and verification of the GHG inventory update, the City concluded that:

- The City accounted for approximately 36.2 $MMTCO_2e$ in 1990.
- The City's most recent inventory shows that emissions fell to 29 $MMTCO_2e$ in 2013.
- Los Angeles' emissions are 20 percent below the 1990 baseline as of 2013, putting Los Angeles nearly halfway to the 2025 pLAn reduction target of 45 percent.

In addition, the 20 percent reduction exceeds the 15 percent statewide goal listed in the First Update to the AB 32 Scoping Plan.

On April 29, 2019, Mayor Garcetti released the Los Angeles' Green New Deal, which is the first four-year update to the 2015 pLAn (the Sustainable City pLAn, as updated by Los Angeles' Green New Deal, is referred to herein as the 2019 updates to the pLAn). This updated plan augments, expands, and elaborates in even more detail the City's vision for a sustainable future and assigns accelerated GHG emission reduction targets and new aggressive goals to place the City on the path to a zero carbon future by 2050. The 2019 updates to the pLAn accelerate the following targets (City of Los Angeles 2019). The Los Angeles Department of Water and Power (LADWP) will:

- Supply 55 percent renewable energy by 2025, 80 percent by 2036, and 100 percent by 2045.
- Source 70 percent of the City's water locally by 2035 and capture 150,000 acre feet/year (AFY) of stormwater by 2035.
- Reduce building energy use per square feet for all types of buildings 22 percent by 2025, 34 percent by 2035, and 44 percent by 2050.
- Reduce vehicle miles traveled (VMT) per capita by at least 13 percent by 2025, 39 percent by 2035, and 45 percent by 2050.
- Ensure 57 percent of new housing units are built within 1,500 feet of transit by 2025, and 75 percent by 2035.
- Increase the percentage of zero emission vehicles in the City to 25 percent by 2025, 80 percent by 2035, and 100 percent by 2050.
- Create 300,000 green jobs by 2035, and 400,000 by 2050.
- Convert all City fleet vehicles to zero emission where technically feasible by 2028.
- Reduce municipal GHG emissions 55 percent by 2025 and 65 percent by 2035 from 2008 baseline levels, reaching carbon neutral by 2045.

Overall, the updated plan calls for reducing GHGs to 50 percent below 1990 levels by 2025 and 73 percent below 1990 levels by 2035 and becoming carbon neutral by 2050. By following the 2019 updates to the Sustainable City pLAn, the City is expected to reduce an additional 30 percent in GHG emissions above and beyond the 2015 pLAn.

3.2.22 City of Los Angeles Green Building Code

In April 2008, the City of Los Angeles adopted the Green Building Program Ordinance to address the impact on climate change from new development. In 2011, 2014, and 2016, Chapter IX, Article 9, of the Los Angeles Municipal Code (LAMC), referred to as the Los Angeles Green Building Code, was amended to incorporate various provisions of the CALGreen Code. The Los Angeles Green Building Code includes mandatory requirements and elective measures for three categories of buildings: (1) low-rise residential buildings, (2) non-residential and high-rise residential buildings, and (3) additions and alterations to residential and non-residential buildings.

3.3 Greenhouse Gases and Climate Change Impacts and Mitigation Measures

3.3.1 Methodology

Project-related activities would result in short-term and long-term generation of GHG emissions during construction and operation. The GHGs that were quantitatively estimated for the project include CO_2, CH_4, and N_2O. Emissions of CO_2e were then calculated using the GWP of each of these pollutants based on IPCC AR4. The GHG emissions from the project were quantified using the same methods described above for estimating criteria pollutants.

3.3.2 Short-term Construction-Generated Emissions

During project construction, GHG emissions would be generated directly by off-road, heavy-duty construction equipment at the project site and worker, vendor, and haul truck vehicle trips traveling to and from the project site, as well as indirectly from water consumption for dust control. As was conducted for the criteria pollutant analysis, the project's construction-related GHG emissions resulting from off-road equipment and on-road vehicles have been estimated using a combination of emission factors and methodologies from CalEEMod, version 2016.3.2, and CARB's EMFAC2021 model, and based on project-specific construction data (e.g., schedule, equipment, truck volumes) provided by BOE, where available. Where project-specific information was not available, reasonable assumptions based on other similar projects and default model settings were used to estimate GHG emissions. In addition, indirect GHG emissions from water consumption for dust control were included in the analysis. Indirect GHG emissions would result from electricity consumption required to supply, distribute, and treat water. The modeling output files are provided in Appendix A of this report.

Based on SCAQMD's 2008 *Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold* document, SCAQMD recommends that for construction GHG emissions the total emissions for a project be amortized over a 30-year period and added to its operational emission estimates (SCAQMD 2008c). Thus, in accordance with SCAQMD's recommendation, the project's construction GHG emissions have been amortized over a 30-year lifetime of the project (i.e., total construction GHG emissions were divided by 30) and the resulting annual emissions were added to the project's estimated annual operational GHG emissions.

3.3.3 Long-term Operational Emissions

The project's operational GHG emissions, including GHGs generated by direct and indirect sources, have been estimated according to the recommended methodologies from SCAQMD. Direct sources include emissions such as vehicle trips, natural gas consumption, emergency generator testing, and landscape maintenance. Indirect sources include offsite emissions occurring as a result of the project's operations such as electricity, water consumption, and solid waste disposal. As was conducted for the criteria pollutant analysis, the direct and indirect GHG emissions generated during the project's operations were estimated using CalEEMod. Modeling is based on project-specific data (e.g., size and type of proposed uses) and design features. The GHG emission calculations for the project also include credits or reductions for GHG-reducing measures that are required by regulation, such as reductions in energy and water demand from the City's Green Building Code, which incorporates by reference the CALGreen Code. The solid waste GHG emissions associated with the project also accounts for the most recent solid waste diversion rate achieved by the City that has been reported, which was approximately 76 percent in 2012 (City of Los Angeles 2013).

Similar to the criteria pollutant analysis, the modeling of mass mobile-source emissions was estimated based on vehicle fleet emission factors generated from EMFAC2021 and daily trips provided in the Transportation Assessment Memorandum for the project (Fehr & Peers 2021). The mobile source emissions modeling takes into account trip reductions from nearby access to public transportation.

Consistency with Greenhouse Gas Reduction Plan, Policies, and Actions

The project's GHG emissions are also evaluated by assessing the project's consistency with applicable GHG reduction strategies and local actions adopted by the City. As discussed further below, the City has established goals and actions to reduce the generation and emission of GHGs from both public and private activities in the Sustainable City pLAn.

In the 2010 CEQA Guidelines amendments, lead agencies were encouraged to tier from programmatic mitigation plans and programs when they perform individual project analyses. The City currently does not have a programmatic mitigation plan to tier from, such as a GHG reduction plan, as recommended in the relevant amendments to the CEQA Guidelines. However, the Mayor's office has released the Sustainable City pLAn, and the City has adopted the Los Angeles Green Building Code, which encourage and require applicable projects to implement energy efficiency measures. In addition, project consistency with state and regional regulatory plans and policies to reduce GHG emissions are analyzed herein, including CARB's 2017 Scoping Plan and SCAG's 2020–2045 RTP/SCS.

3.3.4 Thresholds of Significance

Available Thresholds

The CEQA Guidelines do not provide numeric or qualitative thresholds of significance for evaluating GHG emissions. Instead, they leave the determination of the significance of GHG emissions up to the lead agency and authorize the lead agency to consider thresholds of significance previously adopted

or recommended by other public agencies or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence (CEQA Guidelines §§ 15064.7[b] and 15064.7[c]). Additionally, any public agency may also use an environmental standard as a threshold of significance, as it would promote consistency in significance determination and integrates environmental review with other environmental program planning and regulations (CEQA Guidelines § 15064.7[d]).

As discussed under Section 3.2, *Regulatory Framework*, AB 32 establishes the requirement for reducing statewide GHGs to 1990 emissions levels by 2020. A number of air quality management agencies throughout the state have drafted or adopted various threshold approaches and guidelines for analyzing 2020 operational GHG emissions in CEQA documents. The different thresholds include (1) compliance with a qualified GHG reduction strategy, (2) performance-based reductions, (3) numeric "bright-line" thresholds, (4) efficiency-based thresholds, and (5) compliance with regulatory programs. The California Supreme Court's *Newhall Ranch* decision confirmed that, when an agency chooses to rely completely on a single quantitative method to justify a no-significance finding, "CEQA demands the agency research and document the quantitative parameters essential to that method" (*Center for Biological Diversity v. Department of Fish and Wildlife* [2015] Cal.App.4th). The *Golden Door* case reinforced the message from the *Newhall Ranch* decision that analyses need to provide substantial evidence to support significance thresholds selected for use in the CEQA analysis (*Golden Door Properties v. County of San Diego* [2018] 27 Cal.App.5th 892,). Further, the appellate court ruling in City of *Long Beach v. City of Los Angeles* held that a qualitative analysis of consistency with state GHG reductions plans is adequate and projects that generate a significant amount of GHG emissions may still be consistent with state and local GHG reduction plans (*City of Long Beach v. City of Los Angeles* [2018] 19 Cal.App.5th 465). A qualitative analysis is also supported by the CEQA Guidelines and the SB 97 Final Statement of Reasons.[5]

The City has not adopted a threshold with supporting analysis setting forth approaches and guidelines for analyzing GHG emissions and climate change in CEQA documents. Additionally, although the City prepared the Sustainable City pLAn in 2015, followed by the update in 2019, these plans do not adopt thresholds of significance and otherwise do not meet the criteria established under CEQA Guidelines Section 15183.5(b) to be considered as qualified GHG reduction plans.

The SCAQMD has yet to adopt a GHG significance threshold for land use development projects (e.g., residential/commercial projects) but did form a GHG significance threshold working group to further evaluate potential GHG significance thresholds (SCAQMD 2008d). In October 2008, SCAQMD released a draft guidance document regarding interim CEQA GHG significance thresholds (SCAQMD 2008c). Within its October 2008 document, the SCAQMD proposed interim CEQA GHG indicators of significance using a tiered approach. Under Tier 1, projects that are exempt from CEQA would be less than significant. Under Tier 2, projects that are consistent with an adopted GHG reduction plan would be less than significant. Under Tier 3, all non-industrial land use projects, including mixed-use projects that emit 3,000 $MTCO_2e$ per year or less would be less than significant (SCAQMD 2008c). Tier 4 uses performance standards that require projects to demonstrate that they meet a percent

[5] See CEQA Guidelines Sections 15064.4; 15064.7; California Natural Resources Agency, Final Statement of Reasons for Regulatory Action, Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Case Emissions Pursuant to SB 97, December 2009. Available: http://resources.ca.gov/ceqa/docs/Final_Statement_of_Reasons.pdf. Accessed: September 4, 2019.

emission reduction target below business as usual to determine significance for commercial/residential projects that emit more than 3,000 $MTCO_2e$ per year (SCAQMD 2008c).

In November 2009, the working group proposed an additional Tier 4 standard that uses performance standards, including a requirement for projects to demonstrate that they meet a service population metric to determine significance for commercial/residential projects that emit more than 3,000 $MTCO_2e$ per year (SCAQMD 2009)[6]. The working group proposed a project-level target of 4.6 $MTCO_2e$ per service population, based on calculations performed by the Bay Area Air Quality Management District (BAAQMD 2009). On December 5, 2008, the SCAQMD Governing Board adopted a staff proposal for an interim GHG significance threshold of 10,000 $MTCO_2e$ for stationary source/industrial projects when the SCAQMD is lead agency (SCAQMD 2008b). In the September 2010 presentation by the working group, the Tier 4 performance standard of a percent emission reduction target below business as usual referred to an approach used by the San Joaquin Valley Air Pollution Control District that uses a comparison of a development's GHG emissions to a business-as-usual scenario (SCAQMD 2010; SJVAPCD 2009).

The working group did not recommend a specific numeric reduction target in the September 2010 presentation (SCAQMD 2010). In addition, in September 2010, the working group recalculated the target as 4.8 $MTCO_2e$ per service population by dividing the 2020 statewide GHG reduction target for the land use sector by the sum of total statewide population and land use sector employment, as explained in the September 28, 2010, minutes to Stakeholder Working Group #15 (the prior 4.6 $MTCO_2e$ per service population target was calculated by the Bay Area Air Quality Management District by dividing the 2020 statewide GHG reduction target for the land use sector by the sum of the total statewide population and total statewide employment) (SCAQMD 2010). The aforementioned working group has been inactive since 2011, and the SCAQMD has not formally adopted any GHG significance threshold for land use development projects. It should be noted that the SCAQMD interim thresholds were developed in conjunction with AB 32 and do not address post-2020 GHG reduction goals.

Threshold Approach

In the absence of quantitative GHG thresholds and/or a qualified GHG reduction plan for use by a project to tier or streamline its environmental analysis, CEQA provides that a lead agency could rely on regulatory compliance to show a less-than-significant GHG impact if the project complies with or exceeds those programs adopted by CARB or other state agencies. As discussed previously, the project is expected to be in operation by 2023. Beyond 2020, the state has established a GHG emissions reduction target for 2030 that has been codified in law through SB 32 and the 2017 Scoping Plan was adopted to meet this goal. Therefore, 2030 marks the next statutory statewide milestone target applicable to the project. The plan to achieve these statewide emission reduction goals is provided by the 2017 Scoping Plan (and future updates), and demonstrating consistency with the 2017 Scoping Plan will demonstrate that the project is doing its fair share toward achieving statewide reduction targets.

Overall, of the threshold options discussed above, the approach used in this analysis is compliance with regulatory programs, which is appropriate in addressing the project's post-2020 completion and operation. Under this threshold approach, the project's GHG emissions are evaluated for each

[6] The SCAQMD defines service population as including population and employment.

major emission sector (e.g., energy, water, waste, mobile, stationary) addressed in the 2017 Scoping Plan to determine whether the project's emissions would conflict with applicable sector-specific reduction targets and strategies identified in the 2017 Scoping Plan to meet the state's 2030 target under SB 32. Additionally, the project's consistency with the emissions reduction measures discussed within SCAG's 2020–2045 RTP/SCS and the City's Sustainable City pLAn and Green Building Code will also be assessed to determine if the project would have any significant effect on the environment with respect to GHG emissions.

Note that GHGs and climate change are exclusively cumulative impacts; there are no non-cumulative GHG emissions impacts from a climate change perspective (CAPCOA 2008). Therefore, in accordance with the scientific consensus regarding the cumulative nature of GHGs, the analysis herein analyzes the cumulative contribution of project-related GHG emissions.

3.3.5 Best Management Practices

The following BMP would be implemented as part of the project:

BMP-GHG-1: The following measures will be employed by the project to minimize operational-related GHG emissions:

- Implement energy-efficient heating, ventilation, and air conditioning (HVAC) systems and lighting, and Energy Star appliances.
- Use plant palettes of California native species and plants that are drought tolerant and help reduce water consumption, maintenance, and hardscape repair costs.

3.3.6 Impact Analysis

Project Construction

Construction of the project would result in temporary generation of GHG emissions related to off-road equipment use and on-road vehicle operations. As mentioned previously, GHG emissions are measured exclusively as cumulative impacts; therefore, the project's construction emissions are considered part of the total GHG emissions for the project lifecycle, which also include GHG emissions during operations. In accordance with SCAQMD guidance, the project's construction emissions are amortized over a 30-year period and the resulting annual emissions are combined with the project's annual operational GHG emissions.

Table 3.3-1 below shows GHG emissions related to construction of the project. As shown, construction of the project is estimated to generate a total of 582 $MTCO_2e$ over the construction period. When amortized over a 30-year period, the project's construction GHG emissions would be approximately 19 $MTCO_2e$ per year. Because construction emission sources would cease once construction is complete, construction emissions are considered short term.

Table 3.3-1. Estimated Short-term Construction Related GHG Emissions

Construction Phase	Total GHG Emissions per Phase ($MTCO_2e$)[a]
Demolition	23
Site Preparation	26
Grading	99
Building Construction	394
Paving	26
Total Construction Emissions	**582**
Annual Construction Emissions (Amortized over 30 years)	19

Source: Emissions modeling by ICF using CalEEMod version 2016.3.2 (Appendix A).
[a] Totals may not add up due to rounding.
$MTCO_2e$=metric tons of carbon dioxide equivalent

Project Operations

Area and indirect sources of GHG emissions associated with the project would primarily result from electricity and natural gas consumption, water transport (the energy used to deliver water to and from the project site), and solid waste generation. GHG emissions from electricity consumed on the project site would be generated offsite by fuel combustion at the electricity provider. GHG emissions from water transport are also indirect emissions resulting from the energy required to transport water from its source. The new recreation center at the project site would generate mobile source emissions from motor vehicle trips generated by employees and visitors. Maintenance and testing of the emergency generator would also generate GHG emissions.

The estimated operational GHG emissions resulting from the project are shown in Table 3.3-2. Additionally, in accordance with SCAQMD's recommendation, the project's amortized construction-related GHG emissions from Table 3.3-1 are added to the operational emissions estimate in order to determine the project's total annual GHG emissions.

Table 3.3-2. Estimated Annual Greenhouse Gas Emissions from Project Operation in 2023 (metric tons per year)

Emission Source	Estimated Annual GHG Emissions ($MTCO_2e$ per year)[a]
Area	<0.01
Electricity	91
Natural Gas	10
Mobile	634
Waste	14
Water	10
Stationary	1
Amortized Construction	19
Total Annual Project Emissions	**779**

Source: ICF Emissions Modeling (Appendix A).
[a] Totals may not add up due to rounding.

As shown in Table 3.3-2, the project's total annual GHG emissions would be approximately 779 $MTCO_2e$ per year.

As discussed in the Methodology section, above, the project's compliance with regulatory programs is used to analyze the significance of its potential impacts with respect to GHG emissions dating from its post-2020 completion and operation. Under this threshold approach, the project's GHG emissions are evaluated for consistency with each major emission sector (e.g., energy, water, waste, mobile, and stationary) addressed in the 2017 Scoping Plan to determine whether the project's emissions would conflict with applicable sector-specific reduction targets and strategies identified in the 2017 Scoping Plan to meet the state's 2030 target under SB 32. The following sections present the sector-by-sector analysis of the project's potential GHG impacts.

Area Emissions

As shown in Table 3.3-2, emissions associated with area sources would be less than 1 $MTCO_2e$ per year. The project's area sources include gasoline-powered landscaping equipment (e.g., trimmers, mowers). Area source emissions associated with landscaping equipment are based on CalEEMod's default assumptions, which estimates equipment usage based on square footage of new building space. The planting guidelines for the proposed project would use plant palettes of California native species and plants that help reduce water consumption, maintenance, and hardscape repair costs. Although there are no relevant measures in the Scoping Plan related to area sources, the project's minimal area emissions and use of California native plants that require minimal maintenance would be in line with the Scoping Plan's overall goal of reducing emissions.

Energy Emissions

GHGs are emitted directly from buildings through the combustion of any type of fuel (e.g., natural gas for heating). GHGs can also be emitted indirectly from the generation of electricity. The Scoping Plan outlines strategies to reduce energy demand and fossil fuel use while increasing energy efficiency and renewable energy generation. These strategies include transitioning to cleaner fuels, greater efficiency in existing buildings, and electrification of end uses in commercial sectors. As shown in Table 3.3-2, the project's building energy emissions (i.e., electricity and natural gas) would be approximately 101 $MTCO_2e$ per year.

The Office of Professional Responsibility (OPR)'s 2018 *CEQA and Climate Change Advisory* recommends that a land use development project that "achieves applicable building energy efficiency standards, uses no natural gas or other fossil fuels, and includes Energy Star appliances where available, may be able to demonstrate a less-than-significant greenhouse gas impact associated with project operation." Although OPR recommends new buildings do not consume fossil fuels, the 2017 Scoping Plan does not assume all electric buildings in their 2030 reduction analysis. Rather, the 2017 Scoping Plan assumes new gas appliances will be high efficiency.

The project would install energy-efficient HVAC and lighting systems, Energy Star appliances, and meet Cal Green and Title 24 Building Standards Code requirements. Though the project would allow for natural gas appliances and heating, all units would meet high efficiency standards, consistent with the assumptions and emissions reduction requirements of the 2017 Scoping Plan for 2030. Thus, the project would be consistent with the 2017 Scoping Plan's overall goal of reducing building energy emissions to meet the state's 2030 GHG reduction target.

Mobile Source Emissions

GHG emissions associated with on-road mobile sources are generated from employees and visitors traveling to and from the project site. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines, as well as offsite parking lots for patrons, which can be accessed by shuttle. As discussed above, CARB acknowledges that reductions in VMT are required to meet the state's long-term climate change goals. The project's urban infill location, with nearby access to public transportation in proximity to the project site, is consistent with state and local VMT reduction policies.

The project would provide ample bicycle parking spaces at the project site, satisfying LAMC requirements to support bicycling by its employees and visitors and accommodate up to four EV spaces. The provision of EV spaces at the project site would further reduce mobile GHG emissions. Overall, the project would be consistent with the state's goal of reducing VMT.

Land Use Emissions

The project site has most recently been used as a dirt storage site for the construction of MTA's Crenshaw light rail line and is currently undeveloped. Implementation of the proposed project would develop a recreation center and add much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The 20,000 square foot multifaceted facility will also house flex spaces to accommodate a variety of recreation related social programs, and a community meeting room. The project site is currently zoned PF-1 (Public Facilities) and is also designated as Public Facilities in the South Los Angeles Community Plan. The project's facility would be consistent with the land uses that are allowed under the site's zoning and this land use designations. Additionally, the project's landscaping would plant native and drought-tolerant vegetation, as well as vertical gardens, and would increase carbon sequestration over existing conditions. Although there are no relevant measures in the Scoping Plan or explicit regulatory requirements related to tree or vegetation planting, the Scoping Plan does discuss the importance of maintaining natural and working lands, which also encompasses green spaces in urban and built environments, to serve as a carbon sink. Additionally, the Scoping Plan notes that the creation and management of parks and other green space in urban areas, including expansion of the existing urban tree canopy, would help to reduce GHG emissions. Thus, the additional trees and native and drought-tolerant vegetation by the project would be consistent with the Scoping Plan's overall goal of avoiding losses in carbon sequestration.

Waste Emissions

Solid waste may be disposed in landfills or diverted for recycling, composting, or reuse. GHG emissions from landfills are generated through anaerobic breakdown of material. The Scoping Plan aims to reduce waste emissions by diverting waste away from landfills through waste reduction, re-use, composting, and material recovery. In addition, AB 341 requires mandatory recycling for certain commercial businesses.

As shown in Table 3.3-2, emissions associated with waste would be approximately 14 $MTCO_2e$ per year. As of February 1, 2018, a new waste and recycling system for all businesses and large apartment complexes in the City referred to as "recycLA" was implemented by LA Sanitation &

Environment (LASAN), which is responsible in overseeing the collection and recycling of waste generated by residential, commercial, and industrial uses in the City and surrounding communities. Under the recycLA program, the City is divided into 11 different service zones and waste collection contracts are awarded to seven different companies to collect trash at businesses, apartment buildings, and condos in those areas. Part of the services that recycLA will offer to businesses and large multi-family customers include blue bins for recycling and organics recycling. The implementation of this program aims to reduce landfill disposal by one million tons per year by 2025 and reduce waste by 65 percent in all 11 of the City's service zones, with the goal of achieving zero waste by 2050. Thus, upon its completion and operation in 2023, the project would be served by this solid waste collection and recycling service, which is consistent with the Scoping Plan's overall goal of reducing waste emissions and its specific strategy to avoid landfill methane emissions by reducing the disposal of landfilled waste and organics through programs such as edible food recovery programs. In addition, these features would support and comply with AB 341's mandatory recycling requirement and support the state's recycling goal. With respect to construction and demolition debris, the 2019 CALGreen Code, as amended in the LAMC, requires that at least 65 percent by weight of job site debris generated by most types of building project types be recycled, reused, or otherwise diverted from landfill disposal.

Water and Wastewater Emissions

Indirect GHG emissions result from the production of electricity used to convey, treat, and distribute water and wastewater. The amount of electricity required to convey, treat, and distribute water depends on the volume of water as well as the sources of water. The Scoping Plan outlines objectives and goals to reduce GHGs in the water sector, including using and reusing water more efficiently through greater water conservation, drought tolerant landscaping, stormwater capture, and water recycling. Regulations have further targeted water supply and water conservation (e.g., SB X7-7) through building and landscaping efficiency (e.g., Title 24).

As shown in Table 3.3-2, the annual emissions associated with water use would be approximately 10 $MTCO_2e$ during the project's opening year. As the project would be certified as LEED Silver, water efficiency measures would be incorporated into the project building. These measures generally include the use of low-flow plumbing fixtures to decrease indoor water use and installation of water-efficient irrigation systems and the planting of water-efficient landscaping consisting of native and drought-tolerant vegetation to minimize outdoor irrigation requirements. The project would be consistent with the LASAN's Low Impact Development (LID) policies by reducing stormwater runoff by incorporating a cistern into the project's design. The cistern would be designed to exceed LASAN's requirements for capture and reuse. Thus, the indoor and outdoor water conservation measures of the project serve to support ongoing regulatory programs (e.g., SB X7-7, Title 24, LID) that aim to reduce GHG emissions associated with conveying water and distributing water to ultimately achieve climate neutrality.

Conclusion

As discussed above, the project's sustainability measures are consistent with applicable polices from the 2017 Scoping Plan and regulatory programs for the area, energy, water, waste, and land use sectors. The project's consistency with other statutes and policies related to GHG reduction efforts identified in the 2017 Scoping Plan are identified below. The project would also result in a net increase in native and drought-tolerant vegetation over existing conditions, and therefore would be

consistent with Scoping Plan's overall goal of avoiding losses in carbon sequestration. The location of the project in an urban infill site in proximity to multiple transit options would also result in a reduction in VMT that is consistent with the Scoping Plan's long-term climate change goals. Overall, GHG emissions from construction and operation of the project would have a less-than-significant impact on the environment.

Consistency with Applicable Plans

SCAG 2020–2045 RTP/SCS

The 2020–2045 RTP/SCS is a long-range planning document that balances future mobility and housing needs with economic, environmental, and public health goals in the SCAG region. One of the key strategies of the plan is to integrate land use, housing, and transportation planning to ensure sustainable regional growth. Goals and policies included in the 2020–2045 RTP/SCS to reduce GHG emissions consist of adding density in proximity to transit stations, mixed-use development and encouraging active transportation (i.e., non-motorized transportation such as bicycling). SCAG's 2020–2045 RTP/SCS complies with SB 375, which requires an SCS to be prepared as part of the RTP by each MPO that outlines policies to reduce per capita GHG emissions from automobiles and light trucks. The SCS policies include a mix of strategies that encourage compact growth patterns, mixed-use design, alternative transportation, transit, mobility and access, network expansion, and transportation investment. Table 3.3-3 shows the project's consistency with the 2020–2045 RTP/SCS goals and guiding policies.

Table 3.3-3. Consistency of Project with SCAG 2020–2045 RTP/SCS

Applicable Targets	Project Consistency Assessment
2020–2045 RTP/SCS Goals	
1. Encourage regional economic prosperity and global competitiveness.	**Not applicable**. The Southern California Association of Governments (SCAG) and its member agencies are responsible for aligning Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) investments and polices with improving regional economic prosperity and competitiveness. The project would not conflict with this goal.
2. Improve mobility, accessibility, reliability, and travel safety for people and goods.	**Consistent**. The project would add much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the Metropolitan Transit Authority (MTA) and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide 10 standard and four long-term (enclosed lockers) bike parking. These features support the goal of increased mobility, accessibility, reliability, and travel safety. Therefore, the project is consistent with this goal.
3. Enhance the preservation, security, and resilience of the regional transportation system.	**Consistent**. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines, thereby contributing to increased ridership, preservation, and resilience of the City's multimodal transportation system in the region.

Applicable Targets	Project Consistency Assessment
4. Increase person and goods movement and travel choices within the transportation system.	**Consistent**. The project would encourage the use of mass transit, walking and bicycling, as the project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. Thus, the project would encourage the utilization of mass transit as a mode of transportation to and from the project site area and contribute to increasing person and travel choices within the transportation system. The project would be consistent with this goal.
5. Reduce greenhouse gas emissions and improve air quality.	**Consistent**. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four EV charging spaces. These features would reduce work trips and encourage employees to utilize alternative modes of transportation including public transportation, walking, and bicycling. Furthermore, the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kilowatts (kW), stormwater capture and reuse systems, and vertical gardens.
6. Support healthy and equitable communities.	**Consistent**. The project would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. Onsite parking would also accommodate up to four electric vehicle (EV) charging spaces. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. The project's design and location would help to improve air quality and the well-being of people as they would have greater opportunities for pedestrian and bicycling activity and to reduce their reliance on automobiles. These would support the goal of healthy and equitable communities.
7. Adapt to a changing climate and support an integrated regional development pattern and transportation network.	**Consistent**. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. Onsite parking would also accommodate up to four EV charging spaces. The project would also provide long-term and short-term bicycle parking. The project would also implement energy and water conservation measures to be certified as Leadership in Energy and Environmental Design (LEED) Silver. As part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, and vertical gardens.

Applicable Targets	Project Consistency Assessment
8. Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	**Not Applicable**. This goal is directed toward SCAG to result in more efficient travel. Nevertheless, the project would accommodate up to four EV charging spaces.
9. Encourage development of diverse housing types in areas that are supported by multiple transportation options.	**Not Applicable**. The project is a recreation center and does not include any residential uses. Nonetheless the project would be in close proximity to public transit options, as well as provide long-term and short-term bicycle parking.
10. Promote conservation of natural and agricultural lands and restoration of habitats.	**Consistent**. The project would be consistent with this Goal because the project does not propose the conversion of any natural or agricultural lands to urban use. The project is located in an urban, infill site, and there are no natural or agricultural lands on or near the project site.
2020–2045 RTP/SCS Guiding Principles	
1. Base transportation investments on adopted regional performance indicators and MAP-21/FAST Act regional targets.	**Not Applicable**. This principle is directed toward SCAG in allocating transportation investments. This principle does not apply to the individual development projects such as the project, and no further analysis is required.
2. Place high priority for transportation funding in the region on projects and programs that improve mobility, accessibility, reliability, and safety, and that preserve the existing transportation system.	**Not Applicable**. This principle is directed toward SCAG in allocating transportation system funding. Nevertheless, the project would contribute to a safe, well maintained, and efficient multimodal transportation system.
3. Assure that land use and growth strategies recognize local input, promote sustainable transportation options, and support equitable and adaptable communities.	**Not Applicable**. This principle is directed toward SCAG and the City of Los Angeles and does not apply to individual projects such as the project. Nevertheless, the project site's urban infill location near mass transit and proximity to services, commercial uses, and employment opportunities promotes a pedestrian-friendly environment and supports equitable and adaptable communities. The location of the project site also promotes the use of a variety of transportation options, which includes walking and the use of public transportation.
4. Encourage 2020–2045 RTP/SCS investments and strategies that collectively result in reduced non-recurrent congestion and demand for single occupancy vehicle use, by leveraging new transportation technologies and expanding travel choices.	**Not Applicable**. The project would not involve the 2020–2045 RTP/SCS investments, but would place employment options near multiple public transportation options and non-motorized transportation infrastructure, which would reduce demand for single occupancy vehicle use and leverage past and future RTP/SCS investments.

Applicable Targets	Project Consistency Assessment
5. Encourage transportation investments that will result in improved air quality and public health, and reduced greenhouse gas emissions.	**Consistent**. The project would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four EV charging spaces. These features would reduce work trips and encourage employees to utilize alternative modes of transportation including public transportation, walking, and bicycling.
6. Monitor progress on all aspects of the Plan, including the timely implementation of projects, programs, and strategies.	**Not applicable**. This principle is directed toward SCAG and the City of Los Angeles and not does apply to individual projects such as the project.
7. Regionally, transportation investments should reflect best-known science regarding climate change vulnerability, in order to design for long term resilience.	**Not applicable**. SCAG and its member agencies are responsible for transportation investments and ensuring that they reflect the best-known science regarding climate change vulnerability. The project would not conflict with this policy.
Focus Growth Near Destinations & Mobility Options Strategy 1. Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations.	**Consistent**. As stated above, the project would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project would be in close proximity to public transit options, as well as provide long-term and short-term bicycle parking.
Focus Growth Near Destinations & Mobility Options Strategy 2. Focus on a regional jobs/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main streets.	**Consistent**. As stated above, the project would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles. The project would be in close proximity to public transit options, as well as provide long-term and short-term bicycle parking. As the project site is surrounded by various land uses, it is likely that addition to transit, visitors, and employees would also walk and bicycle to and from the project to destinations. The project would support this by providing bicycle parking and providing enhanced pedestrian amenities around the project site.
Focus Growth Near Destinations & Mobility Options Strategy 3. Plan for growth near transit investments and support implementation of first/last mile strategies.	**Consistent**. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four EV charging spaces.

Applicable Targets	Project Consistency Assessment
Focus Growth Near Destinations & Mobility Options Strategy 4. Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses.	**Consistent**. The project site is currently vacant and would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles.
Focus Growth Near Destinations & Mobility Options Strategy 5. Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods.	**Consistent**. The project site is currently vacant and would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles.
Focus Growth Near Destinations & Mobility Options Strategy 6. Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could include mixed uses or locating and orienting close to existing destinations).	**Consistent**. The project would facilitate the use of alternative modes of transportation, which would aid in reducing the number of solo car trips. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four EV charging spaces.
Focus Growth Near Destinations & Mobility Options Strategy 7. Identify ways to "right size" parking requirements and promote alternative parking strategies (e.g. shared parking or smart parking).	**Consistent**. The project would provide 20 parking spaces. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four EV charging spaces.
Promote Diverse Housing Choices Strategy 1. Preserve and rehabilitate affordable housing and prevent displacement.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. The project is a recreation center and does not include any residential uses.
Promote Diverse Housing Choices Strategy 2. Identify funding opportunities for new workforce and affordable housing development.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. The project is a recreation center and does not include any residential uses.
Promote Diverse Housing Choices Strategy 3. Create incentives and reduce regulatory barriers for building context-sensitive accessory dwelling units to increase housing supply.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.

Applicable Targets	Project Consistency Assessment
Promote Diverse Housing Choices Strategy 4. Provide support to local jurisdictions to streamline and lessen barriers to housing development that supports reduction of greenhouse gas emissions.	**Consistent**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, the project site's urban infill location near mass transit and proximity to services and commercial uses promotes a pedestrian- friendly environment and supports reduced greenhouse gas (GHG) emissions. The location of the project site also promotes the use of a variety of transportation options, which includes walking and the use of public transportation, which also supports reduced GHG emissions.
Leverage Technology Innovations Strategy 1. Promote low emission technologies such as neighborhood electric vehicles, shared ride hailing, car sharing, bike sharing and scooters by providing supportive and safe infrastructure such as dedicated lanes, charging and parking/drop-off space.	**Consistent**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, the project would accommodate up to four EV charging spaces and provide long-term and short-term bicycle parking.
Leverage Technology Innovations Strategy 2. Improve access to services through technology—such as telework and telemedicine as well as other incentives such as a "mobility wallet," an app-based system for storing transit and other multi-modal payments.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.
Leverage Technology Innovations Strategy 3. Identify ways to incorporate "micro-power grids" in communities, for example solar energy, hydrogen fuel cell power storage and power generation.	**Consistent**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, as part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.
Support Implementation of Sustainability Policies Strategy 1. Pursue funding opportunities to support local sustainable development implementation projects that reduce greenhouse gas emissions.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, the project site's urban infill location near mass transit and proximity to services and commercial uses promotes a pedestrian-friendly environment and supports reduced greenhouse gas emissions. The location of the project site also promotes the use of a variety of transportation options, which includes walking and the use of public transportation, which also supports reduced greenhouse gas emissions.
Support Implementation of Sustainability Policies Strategy 2. Support statewide legislation that reduces barriers to new construction and that incentivizes development near transit corridors and stations.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, the project will sit as a node along the new pedestrian and bikeway zone being constructed by the MTA and will seek parking reductions due to its close proximity to MTA train and bus lines. The project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk and pursue other active alternatives to driving. Onsite parking would also accommodate up to four EV charging spaces.

Applicable Targets	Project Consistency Assessment
Support Implementation of Sustainability Policies Strategy 3. Support local jurisdictions in the establishment of Enhanced Infrastructure Financing Districts (EIFDs), Community Revitalization and Investment Authorities (CRIAs), or other tax increment or value capture tools to finance sustainable infrastructure and development projects, including parks and open space.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.
Support Implementation of Sustainability Policies Strategy 4. Work with local jurisdictions/communities to identify opportunities and assess barriers to implement sustainability strategies.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, as part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.
Support Implementation of Sustainability Policies Strategy 5. Enhance partnerships with other planning organizations to promote resources and best practices in the SCAG region.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.
Support Implementation of Sustainability Policies Strategy 6. Continue to support long range planning efforts by local jurisdictions.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.
Support Implementation of Sustainability Policies Strategy 7. Provide educational opportunities to local decisions makers and staff on new tools, best practices and policies related to implementing the Sustainable Communities Strategy.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.
Promote a Green Region Strategy 1. Support development of local climate adaptation and hazard mitigation plans, as well as project implementation that improves community resiliency to climate change and natural hazards.	**Consistent**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, as part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.

Applicable Targets	Project Consistency Assessment
Promote a Green Region Strategy 2. Support local policies for renewable energy production, reduction of urban heat islands and carbon sequestration.	**Consistent**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, as part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.
Promote a Green Region Strategy 3. Integrate local food production into the regional landscape.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.
Promote a Green Region Strategy 4. Promote more resource efficient development focused on conservation, recycling, and reclamation.	**Consistent**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, as part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kW), stormwater capture and reuse systems, high speed EV chargers, and vertical gardens. The project would include trash collection that will facilitate separation of organic, recyclable, and non-recyclable trash streams, and diversion of at least 76 percent of construction and demolition waste from landfills.
Promote a Green Region Strategy 5. Preserve, enhance, and restore regional wildlife connectivity.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project.
Promote a Green Region Strategy 6. Reduce consumption of resource areas, including agricultural land.	**Not Applicable**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, the project does not propose the conversation of any natural or agricultural lands to urban use. The project is located in an urban, infill site, and there are no natural or agricultural lands.
Promote a Green Region Strategy 7. Identify ways to improve access to public park space.	**Consistent**. This strategy is directed toward SCAG and does not apply to individual projects such as the project. However, the project would develop a recreation center and provide much needed open space, increase the availability of recreational opportunities, and provide childcare facilities in an underserved neighborhood in South Los Angeles.

Source: ICF 2020.

The project would be consistent with the land use strategies of the 2020–2045 RTP/SCS and the goals of SB 375, including the reduction of VMT and the corresponding mobile GHG emissions. The urban infill location of the project site is surrounded by a diverse mixture of land uses including residential, commercial, industrial, and service uses. The diversity of land uses in proximity to the project site and onsite bicycle parking would reduce vehicle trips and VMT by encouraging walking and non-automotive forms of transportation, which would result in corresponding reductions in mobile GHG emissions. Thus, implementation of the project would help accommodate forecasted growth within the SCAG region while also supporting the reduction of per capita GHG emissions from passenger vehicles consistent with the 2020–2045 RTP/SCS. The project would also incorporate energy and water conservation features to achieve LEED Silver certification. Overall, the project would be consistent with the goals of SB 375 and the 2020–2045 RTP/SCS.

AB 32, SB 32, and 2017 Scoping Plan

AB 32 and SB 32 outline the state's GHG emissions reduction targets for 2020 and 2030, respectively. In 2008 and 2014, CARB adopted the Scoping Plan and First Update, respectively, as a framework for achieving the emissions reduction targets in AB 32. The Scoping Plan and First Update outline a series of technologically feasible and cost-effective measures to reduce statewide GHG emissions. CARB adopted the 2017 Scoping Plan in November 2017 as a framework to achieve the 2030 GHG reduction goal described in SB 32. As discussed previously, because the project is expected to be in operation by 2023, the statewide GHG emissions reduction target for 2030 is the statutory statewide milestone target that is applicable to the project.

Based on CARB's 2017 Scoping Plan, many of the reductions needed to meet the 2030 target will come from state regulations, including cap-and-trade, the requirement for increased renewable energy sources in California's energy supply, updates to Title 24, and increased emission reduction requirements for mobile sources. The 2017 Scoping Plan indicates that reductions would need to come in the form of changes pertaining to vehicle emissions and mileage standards, changes pertaining to sources of electricity and increased energy efficiency at existing facilities, and state and local plans, policies, or regulations that will lower GHG emissions relative to business-as-usual conditions. The 2017 Scoping Plan carries forward GHG reduction measures from the First Update, as well as new potential measures to help achieve the state's 2030 target across all sectors of the California economy, including transportation, energy, and industry.

As discussed above under Impact GHG-1, the project would be consistent with the applicable policies from the 2017 Scoping Plan and regulatory programs for the area, energy, water, waste, and land use sectors. The project would be designed to achieve LEED Silver certification, and as part of its sustainable design the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals, stormwater capture and reuse systems, high speed EV chargers, and vertical gardens. Thus, the GHG emission reductions resulting from the project's features, design, and location would be consistent with the goals of the 2017 Scoping Plan and would assist the state with meeting its GHG reduction goals. Table 3.3-4 shows the project's consistency with statutes and programs identified in the state's 2017 Scoping Plan that aim to reduce GHG emissions.

Table 3.3-4. Consistency of Project with 2017 Scoping Plan

Applicable Policies and Objectives	Project Consistency Assessment
SB 350: Reduce greenhouse gas (GHG) emissions in the electricity sector through the implementation of the 50 percent Renewables Portfolio Standard (RPS), doubling of energy savings, and other actions as appropriate to achieve GHG emissions reductions planning targets in the Integrated Resource Plan process.	**Consistent.** This policy is a state program that requires no action at the local or project level. Nonetheless, as part of the project's sustainability goals the project would install energy-efficient appliances and low-flow plumbing fixtures, which would reduce emissions in the energy sector.
Low-Carbon Fuel Standard: Transition to cleaner/less-polluting fuels that have a lower carbon footprint.	**Consistent.** This policy is a state program that requires no action at the local or project level. Nonetheless, the project would reduce mobile-source GHG emissions by including short- and long-term bike parking and providing up to four electric vehicle (EV) charging spaces out of the 20 onsite parking spaces provided at the project site.

Applicable Policies and Objectives	Project Consistency Assessment
Mobile Source Strategy (Cleaner Technology and Fuels [CTF] Scenario): Reduce GHGs and other pollutants from the transportation sector through transition to zero-emission and low-emission vehicles, cleaner transit systems and reduction of vehicle miles traveled (VMT).	**Consistent.** This policy is a state program that requires no action at the local or project level. Nonetheless, the project would reduce mobile-source GHG emissions by including short- and long-term bike parking and providing up to four EV charging spaces out of the 20 onsite parking spaces provided at the project site.
SB 1383: Approve and Implement Short-Lived Climate Pollutant strategy to reduce highly potent GHGs.	**Not applicable.** This policy is a state program that requires no action at the local or project level and is not applicable to the proposed project. The project would not conflict with this statute.
California Sustainable Freight Action Plan: Improve freight efficiency, transition to zero-emission technologies, and increase competitiveness of California's freight system.	**Not applicable.** This policy is a state program that requires no action at the local or project level and is not applicable to the proposed project. The project would not conflict with this plan.
Post-2020 Cap-and-Trade Program: Reduce GHGs across largest GHG emissions sources.	**Not applicable.** This policy is a state program that requires no action at the local or project level. The project would not conflict with this program.

City of Los Angeles Sustainable City pLAn

The 2019 Los Angeles' Green New Deal is the first four-year update to the City's 2015 pLAn and expands in more detail the vision to achieve a sustainable future that entails a carbon-neutral economy by 2050. This updated plan accelerates targets from the 2015 pLAn for supplying renewable energy, increasing local water sourcing, reducing building energy, reducing VMT per capita, reducing municipal GHG emissions, increasing the percentage of zero emission passenger and City-fleet vehicles, building new housing near transit, and increasing the number of green jobs. Of the issue areas that are addressed in separate chapters in the 2019 updates to the pLAn, those that are relevant for the project include: Renewable Energy, Local Water, Clean & Health Buildings, Housing & Development, Mobility & Public Transit, Zero Emission Vehicles, Water & Resource Recovery, and Urban Ecosystems & Resilience. The relevant targets established for each of these issue areas that are applicable to the project are shown in Table 3.3-5. The project-level analysis describes the consistency of the project with these targets.

Table 3.3-5. Consistency of Project with Sustainable City pLAn (2019 Update)

Applicable Targets	Project Consistency Assessment
Renewable Energy	
• The Los Angeles Department of Water and Power (LADWP) will supply 55% renewable energy by 2025, 80% by 2036, and 100% by 2045 • Increase cumulative MW by 2025, 2035, and 2050 of: o Local solar to 900-1,500 megawatts (MW), 1,500-1,800 MW, and 1,950 MW o Energy storage capacity to 1,654-1,750 MW, 3,000 MW, and 4,000 MW o Demand response (DR) programs to 234 MW (2025) and 600 MW (2035)	**Consistent.** Although this reduction target is applicable to the City's renewable energy programs, the project would support this target through its installation of high-efficiency HVAC and electrical systems. The project would incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals, stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.
Local Water	
• Reduce potable water use per capita by 22.5% by 2025, and 25% by 2035, and maintain or reduce 2035 per capita water use through 2050	**Consistent.** The project would incorporate water efficiency measures to achieve Leadership in Energy and Environmental Design (LEED) Silver certification. The project also incorporates outdoor water conservation measures including the installation of water-efficient irrigation systems and the planting of water-efficient landscaping consisting of native and drought-tolerant vegetation to minimize irrigation requirements.
Clean & Healthy Buildings	
• Reduce building energy use per square foot for all building types 22% by 2025, 34% by 2035, and 44% by 2050	**Consistent.** The project would install energy efficient measures to achieve LEED Silver certification. The project would incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals, stormwater capture and reuse systems, high speed EV chargers, and vertical gardens.
Housing & Development	
• Ensure 57% of new housing units are built within 1,500 ft. of transit by 2025, and 75% by 2035	**Not Applicable.**
• Create or preserve 50,000 income-restricted affordable housing units by 2035 and increase stability for renters	**Consistent.** The project is a recreation center and does not include any residential uses.
Mobility & Public Transit	
• Increase the percentage of all trips made by walking, biking, micro-mobility / matched rides, or transit to at least 35% by 2025, 50% by 2035, and maintain at least 50% by 2050 • Reduce vehicle miles traveled (VMT) per capita by at least 13% by 2025, 39% by 2035, and 45% by 2050	**Consistent.** Due to its infill location near multiple public transportation options the project would reduce VMT by encouraging the use of transit, walking, and bicycling. The urban infill characteristics of the project site offer a diversity of land uses near the project site, which would reduce vehicle trips and VMT by encouraging walking and non-automotive forms of transportation.

Applicable Targets	Project Consistency Assessment
Zero Emission Vehicles	
• Increase the percentage of electric and zero emission vehicles in the city to 25% by 2025, 80% by 2035, and 100% by 2050	**Consistent.** The project would accommodate up to four EV charging spaces.
Waste & Resource Recovery	
• Increase landfill diversion rate to 90% by 2025, 95% by 2035, and 100% by 2050 • Eliminate organic waste going to landfill by 2028 • Increase proportion of waste products and recyclables productively reused and/or repurposed within L.A. County to at least 25% by 2025, and 50% by 2035	**Consistent.** The project would be served by a solid waste collection and recycling service under the recycLA program that was recently implemented on February 1, 2018. Part of the services that recycLA will offer to businesses and large multi-family customers include blue bins for recycling and organics recycling. The implementation of this program is aimed to achieve the City's zero waste goal by 2050. Construction and demolition debris would be disposed of in accordance with the 2019 CALGreen Code, as amended in the Los Angeles Municipal Code (LAMC).
Urban Ecosystem & Resilience	
• Increase tree canopy in areas of greatest need by at least 50% by 2028	**Consistent.** The project will incorporate extensive and intensive green roofs and vertical gardens. As such, the project would support the City's reduction target associated with increase the City's tree canopy.

As described in Table 3.3-3, the project would be consistent with and support the applicable City targets of the 2019 updates to the pLAn for achieving a carbon neutral economy by 2050.

Conclusion

In summary, the GHG emission reductions resulting from the project's features, design, and location would be consistent with the goals of the 2017 Scoping Plan, SB 375, the 2020–2045 RTP/SCS, and Los Angeles' Sustainable City pLAn. Accordingly, implementation of the project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

Import/Export Quantities[1]

Phase Name	Import (CY)	Export (CY)	Truck Capacity (CY/truck)	# of Trucks Required	# of Trucks Trips (In/Out)	# of Workdays	# of Daily Truck Trips (In/Out)
Demolition	0	18,000	16	1,125	2,250	5	450
Site Preparation	0	1,740	16	109	218	5	44
Grading	0	260	16	17	34	20	2
Building Construction	0	0	16	0	0	183	0
Paving	0	0	16	0	0	20	0

# of Trucks Trips (In/Out)	# of Workdays	# of Daily Truck Trips (In/Out)
2,502	30	84

-Would add 84 trucks trips to the Demoltion, Site Preparation and Grading phases.

1 Data needs responses from applicant

1) Localized Thresholds based on a 2.3-acre site with a receptor distance of 25 meters in SRA 1.

2) Localized operational emissions estimates assume all of the Area Sources and Energy Sources of emissions occur on-site and 5 percent of emissions from Mobile Sources occur on-site.

LABOE-Slauson Recreation Center-Operations

South Coast AQMD Air District, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Government (Civic Center)	20.00	1000sqft	2.12	20,000.00	0
Parking Lot	20.00	Space	0.18	8,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2023
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	663	**CH4 Intensity (lb/MWhr)**	0.026	**N2O Intensity (lb/MWhr)**	0.003

1.3 User Entered Comments & Non-Default Data

Project Characteristics - GHG emission factors based on LADWPs power mix for 2023.

Land Use - Parcel has total acreage of 2.3 acres.

Vehicle Trips - Trip rate consistent with Traffic Study.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Energy Use - Electricity factors updated to result in annual electricity consumption of 300,000 kWh per year.

Water And Wastewater - Indoor water consumption based on project specific information provided by applicant.

Stationary Sources - Emergency Generators and Fire Pumps - Project would have a 54 HP diesel powered emergency generator, maintenance and testing emissions were analyzed for project.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Government (Civic Center)	20.00	1000sqft	2.12	20,000.00	0
Parking Lot	20.00	Space	0.18	8,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2023
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	663	**CH4 Intensity (lb/MWhr)**	0.026	**N2O Intensity (lb/MWhr)**	0.003

1.3 User Entered Comments & Non-Default Data

Project Characteristics - GHG emission factors based on LADWPs power mix for 2023.

Land Use - Parcel has total acreage of 2.3 acres.

Vehicle Trips - Trip rate consistent with Traffic Study.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Energy Use - Electricity factors updated to result in annual electricity consumption of 300,000 kWh per year.

Water And Wastewater - Indoor water consumption based on project specific information provided by applicant.

Stationary Sources - Emergency Generators and Fire Pumps - Project would have a 54 HP diesel powered emergency generator, maintenance and testing emissions were analyzed for project.

Operations GHG Emissions

Project Operations GHG Summary

Source Category	$MTCO_2e$/year
Area	0.0011
Electricity	91.09
Natural Gas	9.81
Mobile	633.50
Waste	13.76
Water	10.38
Stationary	1.03
Construction	19.40
Total Project Emissions	**778.97**

LABOE-Slauson Recreation Center-Operations

South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Government (Civic Center)	20.00	1000sqft	2.12	20,000.00	0
Parking Lot	20.00	Space	0.18	8,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2023
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	663	**CH4 Intensity (lb/MWhr)**	0.026	**N2O Intensity (lb/MWhr)**	0.003

1.3 User Entered Comments & Non-Default Data

Project Characteristics - GHG emission factors based on LADWPs power mix for 2023.

Land Use - Parcel has total acreage of 2.3 acres.

Vehicle Trips - Trip rate consistent with Traffic Study.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Vehicle Emission Factors - Emission factors updated with EMFAC2021 values.

Energy Use - Electricity factors updated to result in annual electricity consumption of 300,000 kWh per year.

Water And Wastewater - Indoor water consumption based on project specific information provided by applicant.

Stationary Sources - Emergency Generators and Fire Pumps - Project would have a 54 HP diesel powered emergency generator, maintenance and testing

Waste Mitigation - Waste diversion rate consistent with City of LA.

Chapter 1
Introduction

The purpose of this Noise Technical Report is to analyze potential noise or vibration impacts that would result from the proposed Slauson Connect Recreation Center Project (project) in the South Los Angeles Community Plan area within the City of Los Angeles (City). The analysis provided in this report evaluates the potential for short- and long-term noise and vibration impacts associated with the construction and operation of the project. The analysis includes a description of the environmental setting for the project, including existing noise conditions, as well as applicable laws and regulations. It also documents the assumptions, methodologies, and findings used to evaluate the impacts.

1.1 Project Description

The project consists of the development of a three-story, 20,000 square foot (sf) multi-use facility focused on recreation and community areas on an approximately 2.3-acre site located at 5820 Normandie Avenue in the City. The facility program will consist of a child care facility, career and social counseling center, multipurpose recreation rooms, office space, community room, facility support space, rooftop meeting space, and green roofs. The project will include sustainability measures in its design to be certified as Leadership in Energy and Environmental Design (LEED) Silver. As part of its sustainable design, the project will incorporate extensive and intensive green roofs, photovoltaic panels to meet net zero goals (60–70 kilowatts [kW]), stormwater capture and reuse systems, high speed electric vehicle (EV) chargers, and vertical gardens. The project facility will be outfitted with the latest technology to help reduce the transmission of airborne viruses to ensure the safety of patrons. Equipment systems and design criteria such as, but not limited to, on-demand air purge systems, ultraviolet (UV) filtration of circulated air, socially distanced waiting areas, and body temperature checkpoints will be incorporated into the final design. An outdoor park area for passive and educational recreation will also be located on the southern side of the project site fronting Slauson Avenue, beginning at Budlong Avenue. The project will sit as a node along the new pedestrian and bikeway zone being constructed by the Metropolitan Transportation Authority (MTA) and will seek parking reductions due to its close proximity to MTA train and bus lines, as well as offsite parking lots for patrons, which can be accessed by shuttle. Onsite parking will be provided to accommodate up to four EV spaces, two Americans with Disabilities Act (ADA) spaces, and 14 compact parking spaces for a total of 20 parking spaces (Abdallah pers. comm.). Furthermore, 10 standard and four long-term (i.e., enclosed lockers) bike parking will also be provided by the proposed project.

The project site is rectangular in shape, with a width of approximately 45 feet and length of approximately 1,233 feet, and extends from the northeast corner of Slauson Avenue and Normandie Avenue to the northwest corner of Slauson Avenue and Budlong Avenue. The project site is bounded by Slauson Avenue to the south, Normandie Avenue to the west, Budlong Avenue to the east, and existing industrial developments to the north. The project site has most recently been used as a dirt storage site for the construction of MTA's Crenshaw light rail line. All storage materials will be cleared at the project site prior to project construction. Additionally, due to previous railway usage

on the site, MTA has agreed to remediate or replace all hazardous materials to an "open space" standard under the voluntary clean-up agreement with the Department of Toxic Substances Control prior to the start of project construction.

Construction of the proposed project is anticipated to occur over an 11-month period from April of 2022 to March of 2023. The proposed multi-use facility will be constructed with the use of pre-approved modular shipping container building manufacturers. The design concept will be based on utilizing 8 feet by 40 feet modular containers, which will serve to reduce building costs and expedite the construction schedule. It is anticipated that the amount of soil that would be removed from the site during construction would be over 20,000 cubic yards.

Chapter 2
Noise Fundamentals

Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a liquid or gaseous medium (e.g., air) to a hearing organ, such as a human ear. Noise is often defined as sound that is objectionable because it is unwanted, disturbing, or annoying.

In the science of acoustics, the fundamental model consists of a sound (or noise) source, a receptor, and the propagation path between the two. The loudness of the noise source and the obstructions or atmospheric factors, which affect the propagation path to the receptor, determine the sound level and the characteristics of the noise perceived by the receptor.

The following sections provide an explanation of key concepts and acoustical terms used in the analysis of environmental and community noise.

2.1 Frequency, Amplitude, and Decibels

Continuous sound can be described by its *frequency* (pitch) and *amplitude* (loudness). A low-frequency sound is perceived as low in pitch; a high-frequency sound is perceived as high-pitched. Frequency is expressed in terms of cycles per second, or Hertz (Hz) (e.g., a frequency of 250 cycles per second is referred to as 250 Hz). High frequencies are sometimes more conveniently expressed in kilohertz (kHz), or thousands of Hz. The audible frequency range for humans is generally between 20 Hz and 20,000 Hz.

The amplitude of pressure waves generated by a sound source correlates with the loudness of that source. The amplitude of a sound is typically described in terms of *sound pressure level* (SPL), also referred to simply as the sound level. The SPL refers to the root-mean-square (rms)[1] pressure of a sound wave and is measured in units called microPascals (µPa). One µPa is approximately one hundred-billionth (0.00000000001) of normal atmospheric pressure. Sound pressure amplitudes for different kinds of noise environments can range from less than 100 to over 100,000,000 µPa. Because of this large range of values, sound is rarely expressed in terms of µPa. Instead, a logarithmic scale is used to describe the SPL in terms of decibels, abbreviated dB. The decibel is a logarithmic unit that describes the ratio of the actual sound pressure to a reference pressure (20 µPa is the standard reference pressure level for acoustical measurements in air). Specifically, an SPL, in decibels, is calculated as follows:

$$SPL = 20 \times \log_{10}\left(\frac{X}{20\mu Pa}\right)$$

where X is the actual sound pressure and 20 µPa is the reference pressure. The threshold of hearing for young people is about 0 dB, which corresponds to 20 µPa.

[1] Root-mean-square (rms) is defined as the square root of the mean (average) value of the squared amplitude of the noise signal.

2.1.1 Decibel Calculations

Because decibels represent noise levels using a logarithmic scale, SPLs cannot be added, subtracted, or averaged through ordinary arithmetic. On the dB scale, a doubling of sound energy corresponds to a 3-dB increase. In other words, when two identical sources are each producing sound of the same loudness, their combined sound level at a given distance would be 3 dB higher than one source under the same conditions. For example, if one bulldozer produces an SPL of 80 dB, two bulldozers would not produce a combined sound level of 160 dB. Rather, they would combine to produce 83 dB. The cumulative sound level of any number of sources, such as excavators, can be determined using decibel addition. The same decibel addition is used for A-weighted decibels described below.

Similarly, the arithmetic mean (average) of a series of noise levels does not accurately represent the overall average noise level. Instead, the values must be averaged using a linear scale before converting the result back into a logarithmic (dB) noise level. This method is typically referred to as calculating the "energy average" of the noise levels.

2.1.2 A-Weighting

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Although the intensity (energy per unit area) of the sound is a purely physical quantity, the loudness or human response is determined by characteristics of the human ear.

Human hearing is limited in the range of audible frequencies as well as in the way it perceives the SPL in that range. In general, people are most sensitive to the frequency range of 1,000 to 8,000 Hz and perceive sounds within that range better than sounds of the same amplitude at higher or lower frequencies. To approximate the response of the human ear, sound levels of individual frequency bands are weighted (i.e., adjusted), depending on human sensitivity to those frequencies. The resulting SPL is expressed in A-weighted decibels, or dBA.

The A-weighting scale approximates the frequency response of the average young ear when listening to most ordinary sounds. When people make judgments regarding the relative loudness or annoyance of a sound, their judgments correlate well with the A-weighted sound levels of those sounds. Table 2-1 describes typical A-weighted sound levels for various noise sources.

Table 2-1. Typical A-Weighted Sound Levels

Common Outdoor Noise Source	Sound Level (dBA)	Common Indoor Noise Source
	— 110 —	Rock band
Jet flying at 1,000 feet		
	— 100 —	
Gas lawn mower at 3 feet		
	— 90 —	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	— 80 —	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawn mower at 100 feet	— 70 —	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	— 60 —	
		Large business office
Quiet urban daytime	— 50 —	Dishwasher in next room
Quiet urban nighttime	— 40 —	Theater, large conference room (background)
Quiet suburban nighttime		
	— 30 —	Library
Quiet rural nighttime		Bedroom at night
	— 20 —	
		Broadcast/recording studio
	— 10 —	
Lowest threshold of human hearing	— 0 —	Lowest threshold of human hearing

2.2 Noise Descriptors

Because sound levels can vary markedly over a short period of time, various descriptors or noise "metrics" have been developed to quantify environmental and community noise. These metrics generally describe either the average character of the noise or the statistical behavior of the variations in the noise level. Some of the most common metrics used to describe environmental noise, including those metrics used in this report, are described below.

- **Equivalent Sound Level (L_{eq})** is the most common metric used to describe short-term average noise levels. Many noise sources produce levels that fluctuate over time; examples include mechanical equipment that cycles on and off, or construction work, which can vary sporadically. The L_{eq} describes the average acoustical energy content of noise for an identified period of time, commonly 1 hour. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustical energy over the duration of the exposure. For many noise sources, the L_{eq} will vary, depending on the time of day. A prime example is traffic noise, which rises and falls, depending on the amount of traffic on a given street or freeway.

- **Maximum Sound Level (L_{max})** and **Minimum Sound Level (L_{min})** refer to the maximum and minimum sound levels, respectively, that occur during the noise measurement period. More specifically, they describe the rms sound levels that correspond to the loudest and quietest 1-second intervals that occur during the measurement.[2]
- **Percentile-Exceeded Sound Level (L_{xx})** describes the sound level exceeded for a given percentage of a specified period. For example, the L_{50} is the sound level exceeded 50 percent of the time (e.g., 30 minutes per hour), and L_{25} is the sound level exceeded 25 percent of the time (e.g., 15 minutes per hour).
- **Community Noise Equivalent Level (CNEL)** is a measure of the 24-hour average A-weighted noise level that is also time-weighted to "penalize" noise that occurs during the evening and nighttime hours when noise is generally recognized to be more disturbing (because people are trying to rest, relax, and sleep during these times). In order to account for this in calculating the CNEL, 5 dBA is added to the L_{eq} during the evening hours of 7 p.m. to 10 p.m.; 10 dBA is added to the L_{eq} during the nighttime hours of 10 p.m. to 7 a.m.; and the energy average is then taken for the whole 24-hour day.
- **Day-Night Sound Level (L_{dn})** is similar to the CNEL described above. L_{dn} is also a time-weighted average of the 24-hour A-weighted noise level. The only difference is that no "penalty" is applied to the evening hours of 7 p.m. to 10 p.m. Ten dBA is added to the L_{eq} during the nighttime hours of 10 p.m. to 7 a.m., and the energy average is then taken for the whole 24-hour day.

It is noted that various federal, state, and local agencies have adopted CNEL or L_{dn} as the measure of community noise. While not identical, CNEL and L_{dn} are normally within 1 dBA of each other when measured in typical community environments, and many noise standards/regulations use the two interchangeably.

2.3 Sound Propagation

When sound propagates over a distance, it changes in both level and frequency content. The manner in which noise is reduced with distance depends on the following important factors.

- **Geometric Spreading**. Sound from a single source (i.e., a "point" source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates (or drops off) at a rate of approximately 6 dBA for each doubling of distance. Highway noise is not a single stationary point source of sound. The movement of vehicles on a highway makes the source of the sound appear to emanate from a line (i.e., a "line" source) rather than from a point. This results in cylindrical spreading rather than the spherical spreading resulting from a point source. The change in sound level (i.e., attenuation or decrease) from a line source is approximately 3 dBA doubling of distance.
- **Ground Absorption**. Usually the noise path between the source and the observer is very close to the ground. The excess noise attenuation from ground absorption occurs due to acoustic energy losses on sound wave reflection. Traditionally, the excess attenuation has also been

[2] One-second intervals correspond to a "slow" time weighting on a sound level meter. For a sound level meter set to a "fast" time weighting, the corresponding interval is 1/8-second.

expressed in terms of attenuation per doubling of distance. This approximation is done for simplification only; for distances of fewer than 200 feet, prediction results based on this scheme are sufficiently accurate. For acoustically "hard" sites (i.e., sites with a reflective surface, such as a parking lot or a smooth body of water, between the source and the receptor), no excess ground attenuation is assumed because the sound wave is reflected without energy losses. For acoustically absorptive or "soft" sites (i.e., sites with an absorptive ground surface, such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dBA per doubling of distance is normally assumed. When added to the geometric spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dBA per doubling of distance for a line source and 7.5 dBA per doubling of distance for a point source.

- **Atmospheric Effects**. Research by the California Department of Transportation (Caltrans) and others has shown that atmospheric conditions can have a major effect on noise levels. Wind has been shown to be the single most important meteorological factor within approximately 500 feet, whereas vertical air temperature gradients are more important over longer distances. Other factors, such as air temperature, humidity, and turbulence, may also have a major effect on sound. Receptors downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas receptors upwind can have lower noise levels. Increased sound levels can also occur because of temperature inversion conditions (i.e., increasing temperature with elevation, with cooler air near the surface) as the warmer air at the higher elevation acts as a cap and causes a reflection of sound that is generated below at the ground level.
- **Shielding by Natural or Human-Made Features**. A large object or barrier in the path between a noise source and a receptor can substantially attenuate noise levels at the receptor. The amount of attenuation provided by this shielding depends on the size of the object, proximity to the noise source and receptor, surface weight, solidity, and the frequency content of the noise source. Natural terrain features (such as hills and dense woods) and human-made features (such as buildings and walls) can substantially reduce noise levels. Walls are often constructed between a source and a receptor with the specific purpose of reducing noise. A barrier that breaks the line of sight between a source and a receptor will typically result in at least 5 dB of noise reduction. A higher barrier may provide as much as 20 dB of noise reduction.

2.4 Human Response to Noise

Noise can have a range of effects on people including hearing damage, sleep interference, speech interference, performance interference, physiological responses, and annoyance. Each of these is briefly described below:

- **Hearing Damage.** A person exposed to high noise levels can suffer hearing damage, either gradual or traumatic. Gradual hearing loss occurs with repeated exposure to excessive noise levels and is most commonly associated with occupational noise exposures in heavy industry or other very noisy work environments. Traumatic hearing loss is caused by sudden exposure to an extremely high noise level, such as a gunshot or explosion at very close range. The potential for noise-induced hearing loss is not generally a concern in typical community noise environments. Noise levels in neighborhoods, and even in very noisy airport environments, are not sufficiently loud as to cause hearing loss.

- **Sleep Interference.** Exposure to excessive noise levels at night has been shown to cause sleep disturbance. Sleep disturbance refers not only to awakening from sleep, but also to effects on the quality of sleep, such as altering the pattern and stages of sleep. Interior noise levels between 50 and 55 dBA L_{max} during nighttime hours (10 p.m. to 7 a.m.) were found to result in sleep disturbance and annoyance (Nelson 1987).
- **Speech Interference.** Speech interference can be a problem in any situation where clear communication is desired, but is often of particular concern in learning environments (e.g., schools) or situations where poor communication could jeopardize safety. Normal conversational speech is in the range of 60 to 65 dBA and any noise in this range or louder may interfere with speech. As background noise levels rise, the intelligibility of speech decreases and the listener will fail to recognize an increasing percentage of the words spoken. A speaker may raise his or her voice in an attempt to compensate for higher background noise levels, but this in turn can lead to vocal fatigue for the speaker.
- **Performance Interference.** Excessive noise has been found to have various detrimental effects on human performance, including information processing, concentration, accuracy, reaction times, and academic performance. Intrusive noise from individual events can also cause distraction. These effects are of obvious concern for learning and work environments.
- **Physiological Responses.** Noise has been shown to cause measurable physiological responses in humans, including changes in stress hormone levels, pulse rate, and blood pressure. The extent to which these responses cause harm or are signs of harm is not clearly defined, but they could contribute to stress-related diseases, such as hypertension, anxiety, and heart disease.
- **Annoyance.** The subjective effects of annoyance, nuisance, and dissatisfaction are possibly the most difficult to quantify, and no completely satisfactory method exists to measure these effects. This difficulty arises primarily from differences in individual sensitivity and habituation to sound, which can vary widely from person to person. What one person considers tolerable can be unbearable to another of equal hearing acuity. An important tool in estimating the likelihood of annoyance due to a new sound is by comparing it to the existing baseline or "ambient" environment to which that person has adapted. In general, the more the level or tonal (i.e., frequency) variations of a sound exceed the previously existing ambient sound level or tonal quality, the less acceptable the new sound will be.

In most cases, effects from sounds typically found in the natural environment would be limited to annoyance or interference. Physiological effects and hearing loss would be more commonly associated with human-made noise, such as in an industrial or occupational setting.

Studies have shown that under controlled conditions in an acoustics laboratory, a healthy human ear is able to discern changes in sound levels of 1 dBA. In the normal environment, the healthy human ear can detect changes of about 2 dBA. However, it is widely accepted that a doubling of sound energy, which results in a change of 3 dBA in a normal environment, is considered to be barely perceptible to most people. A change of 5 dBA is readily perceptible, and a change of 10 dBA is perceived as being twice as loud. Accordingly, a doubling of sound energy (e.g., doubling the volume of traffic on a highway) resulting in a 3 dBA increase in sound would generally be barely detectable.

2.5 Noise-Sensitive Land Uses

Noise-sensitive land uses are the locations most likely to be adversely affected by excessive noise levels, as well as places where quiet is an essential element of their intended purpose. As defined in the Noise Element of the *City of Los Angeles General Plan*, land uses that are sensitive to noise include single- and multi-family dwellings, long-term care facilities (including convalescent and retirement facilities), dormitories, motels, hotels, transient lodgings, and other residential uses; houses of worship; hospitals; libraries; schools; auditoriums; concert halls; outdoor theaters; nature and wildlife preserves; and parks (City of Los Angeles 1999).

Chapter 3
Groundborne Vibration Fundamentals

This chapter describes basic concepts related to groundborne vibration. Groundborne vibration is a small, rapidly fluctuating motion transmitted through the ground. The effects of groundborne vibrations are typically limited to causing nuisance or annoyance to people, but at extreme vibration levels, damage to buildings may also occur.

In contrast to airborne sound, groundborne vibration is not a phenomenon that most people experience every day. The ambient groundborne vibration level in residential areas is usually much lower than the threshold of human perception. Most perceptible indoor vibration is caused by sources within buildings, such as mechanical equipment while in operation, people moving, or doors slamming. Typical outdoor sources of perceptible groundborne vibration are heavy construction activity (e.g., blasting, pile driving, earthmoving), steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the groundborne vibration from traffic is rarely perceptible, even in locations close to major roads. The strength of groundborne vibration from typical environmental sources diminishes (or attenuates) fairly rapidly over distance.

For the prediction of groundborne vibration, the fundamental model consists of a vibration source, a receptor, and the propagation path between the two. The power of the vibration source and the characteristics and geology of the intervening ground, which affect the propagation path to the receptor, determine the groundborne vibration level and the characteristics of the vibration perceived by the receptor.

The following sections provide an explanation of key concepts and terms used in the analysis of environmental groundborne vibration.

3.1 Displacement, Velocity, and Acceleration

When a vibration source (e.g., blasting, dynamic construction equipment, train) impacts the ground it imparts energy to the ground, creating vibration waves that propagate away from the source along the surface and downward into the earth. As vibration waves travel outward from a source, they excite the particles of rock and soil through which they pass and cause them to oscillate. The distance that these particles move is referred to as the *displacement* and is typically very small, usually only a few ten-thousandths to a few thousandths of an inch. *Velocity* describes the instantaneous speed of the motion, and *acceleration* is the instantaneous rate of change of the speed. Each of these measures can be further described in terms of *frequency* and *amplitude*, as discussed below.

Although displacement is generally easier to understand than velocity or acceleration, it is rarely used to describe groundborne vibration because most transducers used to measure vibration directly measure velocity or acceleration, not displacement.

3.2 Frequency and Amplitude

The frequency of a vibrating object describes how rapidly it is oscillating. The unit of measurement for the frequency of vibration is Hz (the same as used in the measurement of noise), which describes the number of cycles per second.

The amplitude of displacement describes the distance that a particle moves from its resting (or equilibrium) position as it oscillates and can be measured in inches. The amplitude of vibration velocity (the speed of the movement) can be measured in inches per second (in/s). The amplitude of vibration acceleration (i.e., the rate of change of the speed) can be measured in inches per second.

3.3 Vibration Descriptors

As noted above, there are various ways to quantify groundborne vibration based on its fundamental characteristics. Because vibration can vary markedly over a short period of time, various descriptors have been developed to quantify vibration. The two most common descriptors used in the analysis of groundborne vibration are peak particle velocity and vibration velocity level, each of which are described below:

- **Peak Particle Velocity (PPV)** is defined as the maximum instantaneous positive or negative peak amplitude of the vibration velocity. The unit of measurement for PPV is in/s. Unlike many quantities used in the study of environmental acoustics, PPV is typically presented using linear values and does not employ a dB scale. Because it is related to the stresses that are experienced by buildings, PPV is generally accepted as the most appropriate descriptor for evaluating the potential for building damage (both Federal Transit Administration [FTA] and Caltrans guidelines recommend using PPV for this purpose). It is also used in many instances to evaluate the human response to groundborne vibration (Caltrans guidelines recommend using PPV for this purpose).
- **Vibration Velocity Level (L_V)** describes the rms vibration velocity. Due to the typically small amplitudes of groundborne vibrations, vibration velocity is often expressed in decibels, calculated as follows.

$$L_V = 20 \times \log_{10}\left(\frac{V}{V_{ref}}\right)$$

where V is the actual rms velocity amplitude and V_{ref} is the reference velocity amplitude. It is important to note that there is no universally accepted value for V_{ref}, but the accepted reference quantity for vibration velocity in the U.S. is 1 micro-inch per second (1×10^{-6} inches/second). The abbreviation VdB is commonly used for vibration decibels to distinguish from noise level decibels. L_V is often used to evaluate human response to vibration levels (FTA guidelines recommend using L_V for this purpose).

3.4 Vibration Propagation

Vibration energy spreads out as it travels through the ground, causing the vibration level to diminish with distance away from the source. High-frequency vibrations reduce much more rapidly than low frequencies so that low frequencies tend to dominate the spectrum at large distances from the source. The propagation of groundborne vibration is not as simple to model as airborne noise. This is because noise in the air travels through a relatively uniform medium, while groundborne vibrations travel through the earth, which may contain significant geological differences. Geological factors that influence the propagation of groundborne vibration include the following:

- **Soil conditions.** The type of soil is known to have a strong influence on the levels of groundborne vibration. Among the most important factors are the stiffness and internal damping of the soil. Hard, dense, and compacted soil, stiff clay soil, and hard rock transmit vibration more efficiently than loose, soft soils, sand, or gravel.
- **Depth to bedrock.** Shallow depth to bedrock has been linked to efficient propagation of groundborne vibration. One possibility is that shallow bedrock acts to concentrate the vibration energy near the surface, reflecting vibration waves back toward the surface that would otherwise continue to propagate farther down into the earth.
- **Soil strata.** Discontinuities in the soil strata (i.e., soil layering) can also cause diffractions or channeling effects that affect the propagation of vibration over long distances.
- **Frost conditions.** Vibration waves typically propagate more efficiently in frozen soils than in unfrozen soils. Propagation also varies depending on the depth of the frost.
- **Water conditions.** The amount of water in the soil can affect vibration propagation. The depth of the water table in the path of the propagation also appears to have substantial effects on groundborne vibration levels.

Specific conditions at the source and receptor locations can also affect the vibration levels. For instance, how the source is connected to the ground (e.g., direct contact, through rails, via a structure) will affect the amount of energy transmitted into the ground. There are also notable differences when the source is underground (e.g., in a tunnel) versus on the surface. At the receptor, vibration levels can be affected by variables such as the foundation type, the building construction, and the acoustical absorption inside the rooms where people are located. When vibration encounters a building, a ground-to-foundation coupling loss will usually reduce the overall vibration level. However, under certain circumstances, the ground-to-foundation coupling may also amplify the vibration level due to structural resonances of the floors and walls.

3.5 Effects of Groundborne Vibration

Vibration can result in effects that range from annoyance to structural damage. Annoyance or disturbance of people may occur at vibration levels substantially below those that would pose a risk of damage to buildings. Each of these effects is discussed below.

3.5.1 Potential Building Damage

When groundborne vibration encounters a building, vibrational energy is transmitted to the structure, causing it to vibrate. If the vibration levels are high enough, damage to the building may occur. Depending on the type of building and the vibration levels, this damage could range from cosmetic architectural damage (e.g., cracked plaster, stucco, tile) to more severe structural damage (e.g., cracking of floor slabs, foundations, columns, beams, wells). Buildings can typically withstand higher levels of vibration from transient sources than from continuous or frequent intermittent sources. Transient sources are those that create a single, isolated vibration event, such as blasting or drop balls. Continuous or frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment. Older, fragile buildings (which may include important historical buildings) are of particular concern. Modern commercial and industrial buildings can generally withstand much higher vibration levels before potential damage becomes a problem.

3.5.2 Human Disturbance or Annoyance

Groundborne vibration can be annoying to people and can cause serious concern for nearby neighbors of vibration sources, even when vibration is well below levels that could cause physical damage to structures. Groundborne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem outdoors, where the motion may be discernible but there is less adverse reaction without the effects associated with the shaking of a building. The normal frequency range of most groundborne vibration that can be felt generally starts from a low frequency of less than 1 Hz to a high of about 200 Hz.

When groundborne vibration waves encounter a building, vibrational energy is transmitted to the building foundation and then propagates throughout the remainder of the structure, causing building surfaces (e.g., walls, floors, and ceilings) to vibrate. This movement may be felt directly by building occupants and may also generate a low-frequency rumbling noise as sound waves are radiated by the vibrating surfaces. At higher frequencies, building vibration can cause other audible effects, such as the rattling of windows, building fixtures, or items on shelves or hanging on walls. These audible effects due to groundborne vibration are referred to as groundborne noise. Groundborne vibration levels that result in groundborne noise are often experienced as a combination of perceptible vibration and low-frequency noise. However, sources that have the potential to generate groundborne noise are likely to produce airborne noise impacts that mask the radiated groundborne noise. Any perceptible effect (vibration or groundborne noise) can lead to annoyance. The degree to which a person is annoyed depends on the activity in which they are participating at the time of the disturbance. For example, someone sleeping or reading will be more sensitive than someone who is engaged in any type of physical activity. Reoccurring vibration effects often lead people to believe that the vibration is damaging their home, even though vibration levels are well below minimum thresholds for damage potential (Caltrans 2020).

Numerous studies have been conducted to characterize the human response to vibration, and, over the years, numerous vibration criteria and standards have been suggested by researchers, organizations, and governmental agencies. These studies suggest that the thresholds for perception and annoyance vary according to duration, frequency, and amplitude of vibration. For transient vibration sources (e.g., single, isolated vibration events, such as blasting), the human response to

vibration varies from barely perceptible at a PPV of 0.04 in/s, to distinctly perceptible at a PPV of 0.25 in/s, and severe at a PPV of 2.0 in/s. For continuous or frequent intermittent vibration sources (such as impact pile driving or vibratory compaction equipment), the human response to vibration varies from barely perceptible at a PPV of 0.01 in/s, to distinctly perceptible at a PPV of 0.04 in/s, and severe at a PPV of 0.4 in/s (Caltrans 2020).

3.6 Vibration-Sensitive Land Uses

As noted above, the potential effects of groundborne vibration can be divided into two categories: building damage and potential human annoyance. Because building damage would be considered a permanent negative effect at any building, regardless of land use, any type of building would typically be considered sensitive to this type of impact. Fragile structures, which often include historical buildings, are most susceptible to damage and are of particular concern.

Human annoyance effects from groundborne vibration are typically only considered inside occupied buildings and not at outside areas such as residential yards, parks, or open space. Buildings that would be considered sensitive to human annoyance caused by vibration are generally the same as those that would be sensitive to noise and would typically include residences, schools, hospitals, assisted living facilities, mental care facilities, places of worship, libraries, performing arts facilities, and hotels and motels.

Chapter 4
Existing Noise Environment

The project site is located in an urban, semi-industrial setting located near transit with a variety of land uses and densities. The site is bounded by Slauson Avenue to the south, Normandie Avenue to the west, Budlong Avenue to the east, and existing industrial development immediately to the north. Commercial uses are also located along Slauson Avenue. The project site currently occupies a former railroad right-of-way.

The existing noise environment in the project vicinity is dominated by traffic noise on local streets, with the loudest noise levels generated along Slauson Avenue and Normandie Avenue. In order to document existing noise levels in the study area, a total of three noise measurements were obtained in the project vicinity. Two short-term (ST) measurements were obtained in the surrounding area on Monday, March 8, 2021. In addition, one long-term (LT) noise measurement was conducted in the vicinity of the project site, near the intersection of West 58th Street and Normandie Avenue, in proximity to existing offsite residential dwellings. The noise-monitoring locations were selected to document the existing noise levels in the project area and at neighboring noise-sensitive receptor locations. Each of the ST measurements was conducted over a period of 10 minutes, while the LT measurements were conducted over a 24-hour period; Figure 1, to follow, shows the locations.

The instrumentation used to obtain the ST noise measurements consisted of a Type 1 Larson Davis (Model 831) integrating sound level meter (SLM). The instrumentation used to obtain the LT noise measurements consisted of a Type 2 Soft dB Piccolo SLM. Both the Type 1 and Type 2 SLMs were field calibrated prior to each measurement to ensure accuracy, using a Larson Davis CAL200 acoustical calibrator; the calibration was also rechecked at the conclusion of each measurement. The instruments are maintained to manufacturer specifications to ensure accuracy, in accordance with American National Standards Institute standard S1.4-2006. For the short-term measurements, the SLM microphone was mounted at a height of 5 feet above the ground. For the long-term measurement, the SLM microphone was mounted on a power pole approximately 8 feet above the ground. The noise measurement results are summarized in Table 4-1. SLM measurement data are included in Appendix A of this report.

Table 4-1. Measured Existing Noise Levels in Project Area

			Noise Levels (dBA)			
Location Number: Description	**Date**	**Time[a]**	**L_{eq}**	**L_{max}**	**L_{min}**	**CNEL**
LT1: South side of West 58th Street, approx. 150 feet NW of project site	3/8/2021 to 3/9/2021	Daytime	69.8[b]	96.5[b]	63.2[b]	74.1
		Nighttime	66.4[c]	63.7[c]	43.0[c]	
ST1: South side of West 58th Street, approx. 145 feet north of project site	3/8/2021	11:29 a.m. to 11:39 a.m.	56.6	74.7	43.8	NM
ST2: Northeast corner of the intersection of West 58th Street and Budlong Avenue, approx. 150 feet NE of project site	3/8/2021	11:47 a.m. to 11:58 a.m.	60.6	73.9	50.3	NM

Note: NM = not measured; NE = northeast; NW = northwest
[a] Daytime = 7 a.m. to 10 p.m. Nighttime = 10 p.m. to 7 a.m.

[b] The value represents the noise level for the noise metric across the daytime period (i.e., 7 a.m. to 10 p.m.).
[c] The value represents the noise level for the noise metric across the nighttime period (i.e., 10 p.m. to 7 a.m.).

As shown in Table 4-1, the noise measurements indicate that the daytime ambient noise levels generally ranged between approximately 57 and 70 dBA L_{eq} in the project area. The LT noise measurement indicated an average daily noise level of approximately 74 dBA CNEL.

Chapter 5
Regulatory Framework

5.1 Federal

There are no federal noise standards or regulations that directly regulate environmental noise related to the construction or operation of the proposed project. There are also no federal vibration standards or regulations adopted by an agency that are applicable to evaluating vibration impacts from land use development projects such as the proposed project. As such, noise impacts produced by the project would be regulated or evaluated by State of California and City of Los Angeles standards designed to protect public well-being and health.

5.2 State

5.2.1 Noise

The state of California has not adopted statewide standards for environmental noise. However, the *State of California General Plan Guidelines,* published and updated by the Governor's Office of Planning and Research, provides guidelines for evaluating the compatibility of various land uses as a function of community noise exposure. These are guidelines for general land use planning that describe noise acceptability categories for different types of land uses considered by the state. The evaluation contained in the guidelines has been incorporated into the City of Los Angeles Guidelines for Noise Compatible Land Use provided in Table 5-3, to follow.

California also requires each local government entity to perform noise studies and implement a noise element as part of its general plan. The purpose of the noise element is to limit the exposure of the community to excessive noise levels; the noise element must be used to guide decisions concerning land use. A discussion of relevant noise-related policies in the Noise Element of the City of Los Angeles General Plan is provided in Section 5.3.1, *Noise*, below.

5.2.2 Vibration

California Department of Transportation

There are no state vibration standards that directly apply to the project. As noted below, there are also no quantitative local standards that can be used to assess project-related vibration. Therefore, while the project would not be subject to Caltrans oversight, guidance published by the agency nonetheless provides groundborne vibration criteria that are useful in establishing thresholds for significant impacts. Caltrans' widely referenced *Transportation and Construction Vibration Guidance Manual* (Caltrans 2020) provides guidance for two types of potential vibration impacts: (1) damage to structures, and (2) annoyance to people. Guideline criteria for each are provided in Table 5-1 and PPV = peak particle velocity

Table 5-2.

Table 5-1. Caltrans Guideline Vibration Damage Criteria

Structure and Condition	Maximum PPV (in/s)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.20	0.10
Historic and some old buildings	0.50	0.25
Older residential structures	0.50	0.30
New residential structures	1.00	0.50
Modern industrial/commercial buildings	2.00	0.50

Source: Caltrans 2020.
Notes:
Transient sources create a single, isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.
PPV = peak particle velocity

Table 5-2. Caltrans Guideline Vibration Annoyance Criteria

Human Response	Maximum PPV (in/s)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.9	0.10
Severe	2.0	0.4

Source: Caltrans 2020.
Notes:
Transient sources create a single, isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.
PPV = peak particle velocity

5.3 Local

5.3.1 Noise

Noise Element of the City of Los Angeles General Plan

The Noise Element of the General Plan serves to identify sources of noise and provide objectives and policies that ensure that noise from various sources does not create an unacceptable noise environment. Overall, the City's Noise Element describes the noise environment (including noise sources) in the City; addresses noise mitigation regulations, strategies, and programs; and delineates federal, state, and City jurisdiction relative to rail, automotive, aircraft, and nuisance noise. The goal, objectives, and policies of the Noise Element that are relevant to the project are provided below.

- Goal: A city where noise does not reduce the quality of urban life.
    - **Objective 2 (Non-airport):** Reduce or eliminate non-airport related intrusive noise, especially relative to noise sensitive uses.
        - **Policy 2.2:** Enforce and/or implement applicable city, state and federal regulations intended to mitigate proposed noise producing activities, reduce intrusive noise and alleviate noise that is deemed a public nuisance.
    - **Objective 3 (Land Use Development):** Reduce or eliminate noise impacts associated with proposed development of land and changes in land use.
        - **Policy 3.1:** Develop land use policies and programs that will reduce or eliminate potential and existing noise impacts.

Implementation Programs

P11: For a proposed development project that is deemed to have a potentially significant noise impact on noise sensitive uses, as defined by this chapter, require mitigation measures, as appropriate, in accordance with California Environmental Quality Act and city procedures.

Examples of mitigation measures to consider:

a. Increase the distance from the noise source and the receptor by providing land use buffers, e.g., parking lots, landscaped setbacks or open areas, utility yards, maintenance facilities, etc..

b. Orient structures, use berms or sound walls, utilize terrain, or use other means to block or deflect noise, provided it is not deflected to other noise-sensitive uses and that the barrier does not create a hiding place for potential criminal activity.

c. Require projects with noise generating components (e.g., auto repair and maintenance facilities) to have no openings in building walls that face sensitive uses.

d. Limit the hours of operation of a noise generating use.

e. Limit the use of the site to prohibit potential noise generating uses that otherwise are allowed by right within the zone classification of the project site.

f. Require that potential noise impacts associated with project construction be minimized by such measures as designating haul routes, requiring less noisy equipment, enclosing, or orienting noisy equipment (e.g., electrical generators) away from noise sensitive uses, imposing construction hours that are more restrictive than those set forth in the Los Angeles Municipal Code, requiring vehicle parking and deployment activities to be separated and buffered from sensitive uses.

g. Determine impacts on noise sensitive uses, such as public school classrooms, which are active primarily during the daytime and evening hours, by weighting the impact measurement to the potential interior noise level (or for exterior uses, e.g., outdoor theaters, to the exterior noise level) over the typical hours of use, instead of using a 24-hour measurement.

h. Other appropriate measures.

P13: Continue to plan, design and construct or oversee construction of public projects, and projects on city owned properties, so as to minimize potential noise impacts on noise sensitive uses and to maintain or reduce existing ambient noise levels.

Examples of noise management strategies to consider:

a. Site or alignment selection to minimize potential noise incompatibility;

b. Orientation of noise sources away from noise sensitive uses;

c. Placement of structures between noise generators and noise sensitive receptors;

d. Enclosure of noise sources;

e. Erection of sound walls, berms or other noise buffers or deflectors, providing that they do not deflect sound to other noise sensitive uses and that the barrier does not create a hiding place for potential criminal activity;

f. Restricted hours of operation;

g. Modification of noise sources (e.g., utilizing less noisy equipment); or

h. Determine impacts on noise sensitive uses, such as public school classrooms, which are active primarily during the daytime and evening hours, by weighting the impact measurement to the potential interior noise level (or for exterior uses, e.g., outdoor theaters, to the exterior noise level) over the typical hours of use, instead of using a 24-hour measurement.

i. Other appropriate measures.

The Noise Element also provides land use/noise compatibility guidelines, as shown in Table 5-3. These are not strict standards, but rather are intended to help guide the determination of appropriate land use and mitigation measures relative to existing or anticipated ambient noise levels. These guidelines are most commonly applied to noise from mobile (transportation) noise sources, such as traffic, rail, and aircraft noise. Stationary noise sources are most commonly addressed using the municipal code standards described below.

Table 5-3. City of Los Angeles Guidelines for Noise Compatible Land Use

	Day-Night Average Exterior Sound Level (CNEL dB)						
Land Use Category	**50**	**55**	**60**	**65**	**70**	**75**	**80**
Residential Single-Family, Duplex, Mobile Home	A	C	C	C	N	U	U
Residential Multi-Family	A	A	C	C	N	U	U
Transient Lodging, Motel, Hotel	A	A	C	C	N	U	U
School, Library, Church, Hospital, Nursing Home	A	A	C	C	N	N	U
Auditorium, Concert Hall, Amphitheater	C	C	C	C/N	U	U	U
Sports Arena, Outdoor Spectator Sports	C	C	C	C	C/U	U	U
Playground, Neighborhood Park	A	A	A	A/N	N	N/U	U
Golf Course, Riding Stable, Water Recreation, Cemetery	A	A	A	A	N	A/N	U
Office Building, Business, Commercial, Professional	A	A	A	A/C	C	C/N	N
Agriculture, Industrial, Manufacturing, Utilities	A	A	A	A	A/C	C/N	N

Source: City of Los Angeles General Plan, Noise Element, 1999.
Notes:
A = Normally acceptable. Specified land use is satisfactory, based on the assumption that the buildings involved are conventional construction, without any special noise insulation.
C = Conditionally acceptable. New construction or development only after a detailed analysis of noise mitigation is made and needed noise insulation features are included in project design. Conventional construction; closed windows and fresh air supply systems or air-conditioning normally will suffice.
N = Normally unacceptable. New construction or development generally should be discouraged. A detailed analysis of noise reduction requirements must be made and noise insulation features included in the design of a project.
U = Clearly unacceptable. New construction or development generally should not be undertaken.
CNEL = Community Noise Equivalent Level; dB = decibel

City of Los Angeles Municipal Code

Construction Noise

Section 41.40(a) of the City of Los Angeles Municipal Code (LAMC) prohibits the use, operation, repair, or servicing of construction equipment, as well as job-site delivery of construction materials, between the hours of 9:00 p.m. and 7:00 a.m. where such activities would disturb "persons occupying sleeping quarters in any dwelling hotel or apartment or other place of residence." Under Section 41.40(b), construction noise emanating from property zoned for manufacturing or industrial uses as well as emergency work necessitated by any flood, fire, or other catastrophe is exempted from the Section 41.40(a) standards. Additionally, Section 41.40(b) also states that construction, repair, or excavation work occurring outside of the permitted hours identified in Section 41.40(a) is allowed if written permission from the Board of Police Commissioners (through its Executive Director) is obtained. In particular, permission can be granted in instances where the construction work is deemed to be in the public interest, or where hardship or injustice, or unreasonable delay would result from its interruption outside of the permitted hours identified in Section 41.40(a). In addition, Section 41.40(c) prohibits construction, grading, and repair work as well as related job-site deliveries on or within 500 feet of land developed with residential structures before 8:00 a.m. or after 6:00 p.m. on any Saturday or national holiday or at any time on Sunday. The only exception to the Section 41.40(c) requirements is for an individual homeowner that is engaged in the repair or construction of their single-family dwelling.

Section 112.05 of the LAMC places a noise level limit of 75 dBA at a distance of 50 feet for powered equipment or tools, which includes construction equipment in, or within 500 feet of, any residential zone between the hours of 7 a.m. and 10 p.m. Under the code, such limits shall not apply where compliance is technically infeasible. Technical infeasibility means that the noise limit cannot be achieved despite the use of mufflers, shields, sound barriers, and/or other noise reduction devices or techniques during operation of the equipment. Section 111.02 of the LAMC provides guidance on conducting sound level measurements pursuant to City noise regulations. The guidance from this section states, in part, "the level of a particular noise being measured shall be the numerical average of noise measurements taken at a given location during a given time period."

The LAMC does not state a specific averaging time to be used for a noise measurement conducted pursuant to City noise regulations. However, as indicated in Section 111.02(b) of the LAMC in regard to sound level measurement procedure and criteria, the City references a period of "60 consecutive minutes" as a criterion in assessing an alleged offensive noise. Therefore, for the purpose of assessing construction activities, the L_{eq} for a 1-hour period is appropriate to assess project impacts.

Operational Noise

Chapter XI, *Noise Regulation (Noise Ordinance)*, of the LAMC regulates noise from non-transportation noise sources such as commercial or industrial operations, mechanical equipment, or residential activities. Although these regulations do not apply to vehicles operating on public rights-of-way, it is noted that they do apply to noise generated by vehicles on private property, such as in parking lots or parking structures. The exact noise standards vary, depending on the type of noise source; however, the allowable noise levels are generally determined relative to the existing ambient noise levels at the affected location.

Section 111.02 provides procedures and criteria for measuring the sound level of noise sources that are alleged to be "offending." Section 111.02 states that under conditions where noise alleged to be offending occurs for more than five but less than 15 minutes in any 1-hour period between the hours of 7:00 a.m. and 10:00 p.m. of any day, a five dBA allowance should be provided to the noise source (i.e., a value of -5 dBA would be added to the sound level measurement of the offending noise source). Additionally, under conditions where the offending noise occurs for 5 minutes or less in any 1-hour period between the hours of 7:00 a.m. and 10:00 p.m. of any day, an additional five dBA allowance can be provided to the noise source. However, under conditions where the offending noise source generates either repeated impulsive noise levels or steady-tone noise levels with an audible fundamental frequency or overtones (except for noise emanating from any electrical transformer or gas-metering and pressure-control equipment existing and installed prior to September 8, 1986), a five dBA penalty should be accounted for in the noise levels (i.e., a value of +5 dBA would be added to the sound level measurement of the offending noise source).

Section 111.03 provides minimum ambient noise levels for various land uses, as described in Table 5-4 below. In the event that the actual measured ambient noise level at a subject location is lower than that provided in the table, the level in the table shall be assumed.

Table 5-4. City of Los Angeles Assumed Minimum Ambient Noise Levels

Zone	Assumed Minimum Ambient Noise (L_{eq}), dBA[a]	
	Daytime (7 a.m.–10 p.m.)	Nighttime (10 p.m.–7 a.m.)
A1, A2, RA, RE, RS, RD, RW1, RW2, R1, R2, R3, R4, and R5	50	40
P, PB, CR, C1, C1.5, C2, C4, C5, and CM	60	55
M1, MR1, and MR2	60	55
M2 and M3	65	65

Source: Los Angeles Municipal Code, Section 111.03.

[a] At the boundary line between two zones, the ambient noise level of the quieter zone shall be used.

A1 = Agricultural Zone; A2 = Agricultural Zone; RA = Suburban Zone; RE = Residential Estate Zone; RS = Suburban Zone; RD= Restricted Density Multiple Dwelling Zones; RW1 = Residential Waterways Zone; RW2 = Residential Waterways Zone; R1 = One-Family Zone; R2 = Two-Family Zone; R3 = Multiple Dwelling Zone; R4 = Multiple Dwelling Zone; R5 = Multiple Dwelling Zone; P = Automobile Parking Zone; PB = Parking Building Zone; CR = Limited Commercial Zone; C1.5 = Limited Commercial Zone; C2 = Commercial Zone; C4 = Commercial Zone; C5 = Commercial Zone; CM = Commercial Manufacturing Zone; M1 = Limited Industrial Zone; MR1 = Restricted Industrial Zone; MR2 = Restricted Industrial Zone; M2 = Light Industrial Zone; M3 = Heavy Industrial Zone

As discussed previously, the LAMC is not explicit with respect to defining the length of time over which an average noise level should be assessed. However, based on the noted reference to "60 consecutive minutes" in Section 111.02 of the LAMC, the 1-hour L_{eq} metric is used as the length of time to determine an average noise level.

Section 112.01 of the Noise Ordinance addresses noise from radios, television sets, and similar devices that are used for the producing, reproducing, or amplification of the human voice, music, or any other sound. This section states that any noise level caused by these devices that is audible to the human ear at a distance in excess of 150 feet from the property line of the noise source, within any residential zone of the City or within 500 feet thereof, would be a noise violation. Additionally, these devices may not generate noise that exceeds the ambient noise level at any adjacent property by more than 5 dBA.

Section 112.02 of the Noise Ordinance addresses noise from air-conditioning, refrigeration, heating, pumping, and filtering equipment. This section states that such equipment may not generate noise that would exceed the ambient noise level at any adjacent property by more than 5 dBA.

Section 112.04 of the Noise Ordinance addresses noise from powered equipment intended for repetitive use in residential areas (e.g., lawn mower, backpack blower, lawn edger, riding tractor) and other machinery, equipment, and devices. This section states that the operation of said equipment between the hours of 10:00 p.m. and. 7:00 a.m. within any residential zone or within 500 feet of a residence is prohibited. Additionally, noise levels associated with the operation of this type of equipment may not generate noise that would exceed the ambient noise level at any adjacent property by more than 5 dBA.

Section 114.02 of the Noise Ordinance addresses noise from motor-driven vehicles. (It is noted that the requirement applies to vehicles on private property only, and does not apply to vehicles operated within public rights-of-way.) This section states that such vehicles may not generate noise that would exceed the ambient noise level at any occupied residential property by more than 5 dBA.

Section 114.03 of the Noise Ordinance addresses noise from vehicle loading and unloading. This section prohibits the loading or unloading of any vehicle, or operation of any dollies, carts, forklifts, or other wheeled equipment, between the hours of 10:00 p.m. and 7:00 a.m. of the following day that causes any impulsive sound or raucous or unnecessary noise within 200 feet of any residential building.

5.3.2 Vibration

There are currently no local regulatory standards for groundborne vibration that are applicable to the project.

Chapter 6
Impacts Analysis

6.1 Methodology

6.1.1 Construction Noise and Vibration

A combination of existing literature and application of accepted noise and vibration prediction and propagation algorithms were used for the prediction of short-term construction and long-term non-transportation and transportation source noise levels, as well as for the evaluation of groundborne vibration impacts. The evaluation of potential noise and vibration impacts associated with project construction was based on the construction schedule, phasing, and equipment assumptions provided by the City's Department of Public Works, Bureau of Engineering (BOE), for the project.

Using the construction assumptions provided for the project, noise and vibration levels were estimated using the methods described below.

Noise

Construction-related noise was analyzed using data and modeling methodologies from the Federal Highway Administration's (FHWA) Roadway Construction Noise Model (FHWA 2008), which predicts average noise levels at nearby receptors by analyzing the type of equipment, the distance from source to receptor, usage factor (i.e., the fraction of time the equipment is operating in its noisiest mode while in use), and the presence or absence of intervening shielding between source and receptor. This methodology is conservative, as it calculates the composite average noise levels for all equipment items scheduled during each construction phase to be operated at the same time, which would seldom, if ever, occur during construction. Construction noise levels were predicted assuming an average noise attenuation rate of 6 dB per doubling of distance from the source. Based on guidance from Section 111.02(a) of the LAMC (which indicates an average value should be used to describe sound levels), Section 111.02(b) of the LAMC (which references a period of "60 consecutive minutes") and Section 112.05 of the LAMC (which describes a noise limit of 75 dBA for construction equipment), a noise limit of 75 dBA 1-hour L_{eq} is used as the criterion to define a noise exceedance associated with construction activities. Thus, to analyze the project's potential noise impacts, the average 1-hour L_{eq} construction noise level generated during each phase of construction was estimated at each analyzed receptor based on their distance to the construction phase activity. To reflect the assumed distribution of equipment across the project site, source-to-receptor distances used in the analysis were the acoustical average distances between the project site and each receptor.[3]

[3] The acoustical average distance is used to represent noise sources that are mobile or distributed over an area (such as the analyzed construction area within the project site); it is calculated by multiplying the shortest distance between the receptor and construction area boundary by the farthest distance and then taking the square root of the product.

During project construction, noise levels would also be generated from construction-related traffic associated with worker trips and haul truck trips on local roadways. The analysis of roadway noise levels from the project's construction traffic was conducted using a proprietary traffic noise model, with calculations based on data from the FHWA Traffic Noise Model, Version 2.5, Look-Up Tables (FHWA 2004). This model allows for the calculation of noise levels at specific distances from the center of the roadway based on traffic volumes, average speeds, and site environmental conditions. For the purpose of this analysis, the highest daily worker and haul truck trips that would occur during project construction are assessed. The construction-related offsite worker trip and haul truck volumes were obtained from BOE. The predicted roadway noise levels resulting from the addition of the project's construction-related traffic volumes to existing traffic volumes along segments of Slauson Avenue, which will be used during construction to access the project site, were assessed against the existing roadway noise levels without the project's construction traffic.

Vibration

Construction-related vibration resulting from the project was analyzed using data and modeling methodologies provided by Caltrans' *Transportation and Construction Vibration Guidance Manual* (Caltrans 2020). This guidance manual provides typical vibration source levels for various types of construction equipment, as well as methods for estimating the propagation of groundborne vibration over distance. The project would not require high-impact construction methods, such as pile driving or blasting. Therefore, the highest groundborne vibration levels would be associated with conventional heavy construction equipment, such as bulldozers, backhoes, and loaders. According to Caltrans data, the largest generally available models of each of these heavy pieces of equipment can generate a PPV of 0.089 in/s at a reference distance of 25 feet, whereas smaller versions of this equipment can generate a PPV of 0.003 in/s at a reference distance of 25 feet. All of the analyzed equipment is classified as continuous/frequent intermittent vibration sources based on Caltrans' vibration criteria.

The following equation from the guidance manual was used to estimate the change in PPV levels over distance:

$$PPV_{rec} = PPV_{ref} \times (25/D)^{n}$$

where PPV_{rec} is the PPV at a receptor; PPV_{ref} is the reference PPV at 25 feet from the equipment; D is the distance from the equipment to the receptor, in feet; and n is a value related to the vibration attenuation rate through ground (the default recommended value for n is 1.1).

6.1.2 Operational Noise

The analysis of traffic noise in the study area was based on data obtained from the traffic engineer for the proposed project (Fehr & Peers 2021). The analysis was conducted using a proprietary traffic noise model, with calculations based on data from the FHWA Traffic Noise Model, Version 2.5, Look-Up Tables (FHWA 2004). The inputs used in the traffic noise modeling included average daily traffic (ADT) volumes, assumed traffic mix and daily distribution (the percentage of automobiles versus medium trucks and heavy trucks during each hour of the day), and traffic speeds, based on the posted speed limits. The ADT used in the modeling were estimated by assuming that the peak PM traffic volumes at the study intersections provided by the traffic engineer represented 10 percent of the ADT. To quantify the effects of the project, traffic noise was analyzed using three different

scenarios: (1) existing, (2) future (2022) without project, and (3) future (2022) with project. The noise modeling is provided in Appendix B.

Aside from traffic noise associated with the project that would be generated offsite, onsite noise levels would also be generated by stationary noise sources such as mechanical equipment (heating, ventilation, and air conditioning [HVAC] equipment and a potential emergency generator), the onsite parking facility, and the outdoor play area associated with the future child care facility. Using noise level data from published sources, impacts from these stationary noise sources are evaluated by estimating the noise levels that each noise source would generate at the nearest noise-sensitive receptors to the project site. The estimated noise level from each noise source takes into account the distance from source to receptor and the presence or absence of intervening shielding between source and receptor.

With regard to mechanical equipment, noise level data for the project's rooftop HVAC equipment were obtained from a manufacturer's specification sheet for a six-ton heating and cooling unit, which are the units that are anticipated to be used for the proposed project. The project's onsite parking noise levels were estimated using FTA's recommended methodology for stationary source general assessment, which uses the following equation to estimate noise levels for parking garages:

$$L_{eq}(h) = SEL_{ref} + 10\log(N_A/1000) - 35.6$$

where $L_{eq}(h)$ is the hourly L_{eq} noise level at 50 feet; SEL_{ref} is the reference noise level for a stationary noise source represented in sound exposure level at 50 feet from the noise source;[4] and N_A is the number of automobiles per hour.

As the project's noise levels associated with the child care facility's outdoor play area would consist of children playing, published data for human speech noise levels for children were obtained and noise levels were estimated based on assumptions of the number of children that are expected to gather at the outdoor play area. The speech noise levels for children in various noise environments used for analysis in this report are shown in Table 6-1.

Table 6-1. Average A-Weighted Sound Levels of Speech for Different Vocal Efforts[a]

	Sound Levels (dBA L_{eq})
Voice Effort	**Children**
Casual	53
Normal	58
Raised	65
Loud	74
Shout	82

Source: USEPA 1977.
dBA = A-weighted decibel; L_{eq} = equivalent sound level
[a] Measured at a distance of 1 meter.

[4] A SEL_{ref} of 92 dBA is cited by the FTA for a parking garage with 1,000 cars during the peak activity hour. Although the proposed project's peak hour vehicle trips would be substantially less than 1,000 vehicles, the 92 dBA SEL_{ref} is used for the noise analysis of the project's onsite parking facility for the purposes of conducting a conservative analysis.

6.2 Best Management Practices

The following best management practices (BMPs) would be implemented as part of the proposed project:

- In accordance with Section 41.40 of the LAMC, construction activities (including deliveries, equipment maintenance, or operation of any construction equipment) at the project site will be prohibited before 7:00 a.m. or after 9:00 p.m. from Monday through Friday, before 8:00 a.m. or after 6:00 p.m. on any Saturday or national holiday, or at any time on Sunday.
- All construction equipment will be maintained in accordance with manufacturers' standards, including mufflers and ancillary noise abatement equipment.
- To the extent feasible, high noise-producing activities will be scheduled during periods that are less sensitive to high noise levels (e.g., after 8:00 a.m.).
- Construction equipment engines will be switched off when not in use.
- Stationary construction equipment, such as compressors, will be positioned as far away as practical from any adjacent noise-sensitive receptors.
- Use of noise-producing signals, including horns, whistles, alarms, and bells, will be restricted for safety warning purposes only.
- Onsite construction vehicle speeds will be reduced to at least 15 miles per hour.
- All roof-mounted HVAC equipment will be properly screened from view by neighboring land uses with a structural parapet.
- Any potential emergency generator that will be installed at the project site will be housed in an enclosure and located within a designated mechanical room.

6.3 Thresholds of Significance

The criteria used to evaluate the potential construction and operational noise impacts associated with the proposed project are discussed below.

6.3.1 Short-term Construction Noise Criteria

As discussed previously in Section 5.3, *Local*, the City regulates construction noise levels per the requirements of the LAMC, which establishes permissible hours for construction activities under Section 41.40 and noise level limits for construction equipment under Section 112.05. As such, the construction noise levels generated by the project would be assessed against these noise regulations and standards of the LAMC to determine whether potential noise impacts would occur. It should be noted that both Sections 41.40 and 112.05 of the LAMC also identify conditions where their respective provisions would not apply. With respect to permissible hours for construction activities,

Section 41.40(b) states that construction work occurring outside of the hours between 7:00 a.m. to 9:00 p.m. is allowed if written permission from the Board of Police is obtained. With respect to noise level limits for construction equipment, Section 112.05 of the LAMC also states that its noise limit "shall not apply where compliance is technically infeasible. Technical infeasibility means that the noise limit cannot be achieved despite the use of mufflers, shields, sound barriers, and/or other noise reduction devices or techniques during operation of the equipment." Therefore, construction activities that either occur outside of the City's permitted construction hours and days identified in Section 41.40 of the LAMC without written permission from the Board of Police, or generate noise levels in excess of the 75 dBA 1-hour L_{eq} noise limit established under Section 112.05 of the LAMC without implementation of technically feasible noise-reduction measures or techniques, are considered to result in significant impacts. Section 112.05 of the LAMC indicates that the 75 dBA L_{eq} noise limit applies at a distance of 50 feet. However, for the purpose of conducting a conservative analysis, the noise limit is applied at the nearest sensitive receptors to the project site even though these existing noise-sensitive receptors are located further than 50 feet from the project site.

6.3.2 Long-Term Operational Noise Criteria

In accordance with Chapter XI, *Noise Regulation*, of the LAMC, a noise level increase of 5 dBA over the existing average ambient noise level at an adjacent property line is considered a noise violation for most operational noise sources (City of Los Angeles 2019). This standard applies to: (1) radios, television sets, and similar devices defined in LAMC Section 112.01; (2) air conditioning, refrigeration, heating, pumping, and filtering equipment defined in LAMC Section 112.02; (3) powered equipment intended for repetitive use in residential areas and other machinery, equipment, and devices defined in LAMC Section 112.04; and (4) motor vehicles driven on site as defined in LAMC Section 114.02. As such, based on the regulations of the LAMC, a significant operational noise impact would occur if project-related operational onsite (i.e., non-roadway) noise sources such as building mechanical/electrical equipment, parking facilities, and outdoor gathering areas increase the existing ambient noise level at noise-sensitive uses by more than 5 dBA.

6.3.3 Traffic Noise Criteria

With respect to roadway noise, which is a continual noise source that occurs throughout the day, a 24-hour average noise level metric (i.e., dBA CNEL) is used to assess noise impacts associated with the project based on the City's land use/noise compatibility guidelines shown in Table 5-3.[5] With respect to the community noise assessment, changes in noise levels of less than 3 dBA are generally not discernable to most people, while changes greater than 5 dBA are readily perceptible and would be considered a significant increase. For the purpose of this analysis, a significant impact related to an increase in traffic noise levels resulting from project-induced vehicle trips during construction (worker trips) and operations would occur if the project causes the ambient noise level at affected sensitive land uses to increase by 3 dBA in CNEL to or within the "normally unacceptable" or "clearly unacceptable" category identified in Table 5-3, or any 5 dBA or greater noise increase if the ambient noise level at the affected sensitive land use is within the "normally acceptable" or "conditionally acceptable" category.

[5] As discussed in Section 5.3.1, *Noise*, above, the City's land use/noise compatibility guidelines are most commonly applied to noise from mobile (transportation) noise sources, such as traffic, rail, and aircraft noise. Stationary noise sources are most commonly addressed using the municipal code standards.

6.3.4 Groundborne Vibration Criteria

As there are currently no local regulatory standards for groundborne vibration that are applicable to the project, the quantitative criteria published by Caltrans to assess potential structural damage risks and human annoyance resulting from groundborne noise and vibration (refer to Table 5-1 and PPV = peak particle velocity

Table 5-2) will be used as the threshold of significance for this analysis.

6.4 Impact Analysis

6.4.1 Construction Noise

Onsite Construction Noise

Construction activities associated with the project are anticipated to last approximately 12 months, with completion anticipated in 2023. During this time, temporary increases in noise levels in the project area would occur due to the operation of various large construction equipment within the project site. For any individual offsite receptor located in proximity to the project, noise levels experienced over the construction period would fluctuate depending on the type of construction activity and the location of that activity occurring within the project site. The noise levels generated by each individual piece of construction equipment associated with each of the different construction activities phases that would occur as part of the project are shown in Table 6-2.

Table 6-2. Project Construction Phases and Equipment Noise Levels

Phase	Equipment	Quantity[a]	Individual Equipment Noise Levels (dBA) at 50 Feet L_{eq}
Demolition	Dump Truck	1	73
	Excavator	1	77
	Street Sweeper	1	72
	Water Truck	1	70
Site preparation	Dozer	1	78
	Dump Truck	1	73

Source: FHWA 2008.

[a] The quantity of each type of equipment that is anticipated to operate at the project site during each construction activity.

For the purposes of this analysis, the composite hourly average noise levels for the multiple equipment items associated with each construction activity shown in Table 6-2 were first calculated at a reference distance of 50 feet as part of an intermediary step for use in estimating the noise levels at sensitive offsite receptors. The composite hourly average noise levels for each construction activity are shown in Table 6-3.

Table 6-3. Composite Noise Levels for Each Construction Phase

Construction Phase	Average Composite Hourly Noise Level (L_{eq}) at 50 feet, dBA
Demolition	80
Site preparation	81
Grading	84
Building Construction	83
Paving	82

As shown in Table 6-3, the average hourly noise levels for the project's construction activities would range from 80 to 84 dBA L_{eq} at the reference distance of 50 feet. The highest noise levels would be associated with the grading construction activities.

The nearest sensitive land uses in the project site vicinity that could be exposed to increased noise levels during project construction include:

- The single- and multi-family residential uses located approximately 195 feet to the north of the project site, across West 58th Street (SR-1 in Figure 6-1)[6]
- The multi-family residential uses located northwest of the project site and across Normandie Avenue, with the nearest residence located approximately 155 feet away (SR-2 in Figure 6-1)
- The single-family residential uses located west of the project site and behind an existing commercial property located across Normandie Avenue, with the nearest residence located approximately 295 feet away (SR-3 in Figure 6-1)
- The single-family residential uses located south of the project site and across Slauson Avenue, with the nearest residence located approximately 70 feet away (SR-4 in Figure 6-1)
- The single-family residential uses located east of the project site and across Budlong Avenue, with the nearest residence located approximately 60 feet away (SR-5 in Figure 6-1)

For the purposes of this analysis, potential construction-related noise impacts were assessed at these nearest sensitive receptor locations. The highest construction noise levels at each of these analyzed receptor locations were estimated based on the composite noise levels shown in Table 6-3 and the distance of each analyzed receptor from the project's construction activities. The estimated construction noise levels experienced by the nearby sensitive receptors are shown in Table 6-4. The locations of these receptors are shown on Figure 6-1. Detailed calculations are provided in Appendix B.

[6] The SR-1 location is used to represent the nearest residential uses located north of the project fronting West 58th Street, between Normandie Avenue and Slauson Avenue.

Table 6-4. Estimated Construction Noise Levels at Nearby Sensitive Receptors – Unmitigated

Receptor Location	Project Construction Phase	Estimated Average Hourly Noise Level (dBA Leq)[a]	Highest Estimated Average Hourly Noise Level (dBA L_{eq})	Exceed Applicable Noise Standard?
SR-1[b] – Nearest single- and multi-family residential uses located north of the project site, across West 58th Street.	Demolition	58	62[c]	No

SR-2 – Nearest multi-family residential use located northwest of the project site, across Normandie Avenue.	Demolition	56	60[c]	No
	Site preparation	57		
	Grading	60		
	Building Construction	59		
	Paving	58		
SR-3 – Nearest single-family residential use located west of the project site and behind an existing commercial property, across Normandie Avenue.	Demolition	52	56[c]	No
	Site preparation	53		
	Grading	56		
	Building Construction	55		
	Paving	54		
SR-4 – Nearest single-family residential use located south of the project site, across Slauson Avenue.	Demolition	67	71	No
	Site preparation	68		
	Grading	71		
	Building Construction	70		
	Paving	69		
SR-5 – Nearest single-family residential use located east of the project site, across Budlong Avenue.	Demolition	65	69	No
	Site preparation	66		
	Grading	69		
	Building Construction	68		
	Paving	67		

[a] The noise levels are estimated using a source-to-receptor distance that represents the acoustical average distance between the construction area and each receptor location.
[b] Given that the nearest residential uses located north of the project site extend along the entire segment of West 58th Street between Normandie Avenue and Budlong Avenue, for the purpose of this analysis the selected location to be analyzed (i.e., SR-1) is located near the middle of the street segment where it would have the minimum acoustical average distance from the project's onsite construction noise sources.
[c] The estimated construction noise level at this location takes into account an additional 5 dBA reduction in noise levels due to the presence of intervening building structures that obstruct the line of sight between the receptor and the project site.

As shown in Table 6-4, the highest estimated construction-related noise levels that could result at nearby sensitive receptors over the course of project's construction period would range from 56 dBA L_{eq} at SR-3 to 71 dBA L_{eq} at SR-4. Overall, all of the analyzed sensitive receptors that are nearest to the project site would not be exposed to construction noise levels exceeding the City's noise standard of 75 dBA L_{eq}.

Off-Site Construction Traffic Noise

Construction worker vehicles and haul trucks, which would transport equipment and materials to and from the project site, would incrementally increase noise levels on the local roads in the project area. The trucks traveling to and from the project site would be required to travel along the haul route approved by the City of Los Angeles for the project. It is anticipated that the proposed haul route for the project will require trucks to access the project site from the nearby Interstate (I-) 110 and traveling on Slauson Avenue. I-110 is located approximately 0.9 mile east of the project site.

Based on construction-related information provided by BOE, it was determined that the demolition phase would require the heaviest worker and truck trips per day. As such this phase would contribute most to increased roadway noise levels in the project area. During the demolition phase, an estimated 178 daily truck trips (89 inbound and 89 outbound) and 48 daily worker trips (24 inbound and 24 outbound) would occur. To assess the potential traffic noise increase resulting from project construction, the additional daily traffic volumes generated from the project's demolition phase were added to the existing daily traffic volumes on the segments of Slauson Avenue in the project vicinity to assess the increase in noise levels. The estimated roadway noise levels resulting from the addition of the project's construction-related traffic on these roadway segments are shown in Table 6-5.

Table 6-5. Off-Site Construction Traffic Noise Levels

Roadway	Roadway Segment	Existing Traffic Volume Noise Levels (dBA CNEL)[a]	Existing + Project Construction Traffic Volume Noise Levels (dBA CNEL)[a]	Increase (dBA CNEL)
*Demolition **Phase***				
Slauson Avenue	East of Normandie Avenue	65.5	66.0	0.5
	West of Budlong Avenue	65.6	66.1	0.5
	East of Budlong Avenue	65.5	66.0	0.5

Existing Traffic Information Source: Fehr & Peers 2021.
[a] Noise levels are estimated at 50 feet from the roadway centerline.

As shown in Table 6-5, the increase in traffic noise levels on Slauson Avenue would be below the most stringent criterion of 3 dBA CNEL during the demolition phase. As such, the project's effect on daily average ambient noise levels related to construction traffic would be barely noticeable. As such, the project's effect on ambient noise levels with respect to construction vehicle and haul trips would be negligible.

Figure 6-1
Offsite Sensitive Receptor Locations Analyzed
Slauson Connect Recreation Center

6.4.2 Project Operation

Off-Site Operational Traffic Noise

The project would generate new vehicle trips that would incrementally add to traffic levels on surrounding streets and could change the associated traffic noise levels. Based on the AM and PM peak hour traffic volumes obtained from the project's traffic engineer at the study intersections of Slauson Avenue and Normandie Avenue and Slauson Avenue and Budlong Avenue, it was determined that the PM peak hour volumes were higher (representing worst-case peak hour traffic volumes), and therefore were used to derive the ADT volumes for the traffic noise analysis. The ADT volumes on the nearby roadway segments to the project site were estimated, based on guidance from the traffic engineers, by assuming that the peak PM traffic volumes at the study intersections represented 10 percent of the ADT.[7]

Table 6-6 summarizes the predicted existing and future noise levels, both with and without the project, from the roadway segments that are adjacent to the project site. The results indicate that future traffic noise levels with the project along the studied roadway segments would only be 0.1 dBA higher than existing baseline conditions on certain segments. Project-generated traffic results indicate that the project would also contribute no more than a 0.1 dBA increase over the future no project conditions. With respect to the community noise assessment, changes in noise levels of less than 3 dBA are generally not discernable to most people. As such, the small level of traffic noise increase resulting from the project is considered imperceptible to the human ear. Therefore, impacts associated with traffic noise levels from implementation of the project would not generate a substantial increase in noise levels in the project area.

[7] Personal communication with Netai Basu of Fehr & Peers on March 29, 2021.

Table 6-6. Predicted Traffic Noise Levels

Roadway/Segment	Estimated Traffic Noise Levels at 50 feet from Roadway Centerline (dBA CNEL)				
	Existing (Baseline)	Future without Project	Future with Project	Increase over Existing (Cumulative)[a]	Increase over Future without Project[a]
Normandie Avenue					
North of Slauson Avenue	66.4	66.4	66.5	0.1	0.1
South of Slauson Avenue	66.2	66.2	66.2	0.0	0.0
Budlong Avenue					
North of Slauson Avenue	57.2	57.2	57.3	0.1	0.1
South of Slauson Avenue	55.7	55.7	55.7	0.0	0.0
Slauson Avenue					
West of Normandie Avenue	65.5	65.5	65.6	0.1	0.1
East of Normandie Avenue	65.5	65.5	65.6	0.1	0.1
West of Budlong Avenue	65.6	65.6	65.7	0.1	0.1
East of Budlong Avenue	65.5	65.6	65.6	0.1	0.0

[a] Values representing noise increases may not add up exactly due to rounding.

dBA = A-weighted decibel; CNEL = Community Noise Equivalent Level

On-Site Stationary Source Noise

Once operational, the project would introduce stationary onsite noise sources at the project site. These would include the onsite parking area, mechanical equipment (i.e., rooftop HVACs and a potential emergency generator), and activities at the child care center outdoor play area.

Parking Noise

The project would include onsite parking on the west side of the project property at the ground level that would accommodate a total of 20 parking spaces.[8] A driveway off of Normandie Avenue would serve as the only entry and exit point for this parking area. The nearest sensitive receptors that may be exposed to the project's parking noise levels would be SR-2 and SR-3 located approximately 165 feet northwest and 295 feet west, respectively, of the access driveway off of Normandie Avenue. Activities at the parking area would generate sporadic noise from vehicles starting, car doors slamming, car alarms, people talking, etc.

For the purpose of quantifying noise levels generated by the project's ground level parking area, it was conservatively assumed that up to 20 percent of the project's daily vehicle trips (i.e., approximately 103 vehicles) would access the parking area during the peak hour. Based on this peak hour traffic volume and the distance to the nearest offsite sensitive receptors, it was determined, using FTA's recommended methodology for stationary source general assessment, that the project's highest peak-hour vehicle trips would generate noise levels of approximately 36 dBA L_{eq} at SR-2 and 21 dBA L_{eq} at SR-3.[9] As shown in Table 4-1, the existing daytime hourly noise levels measured in the project area where residential uses are located ranged from approximately 57 dBA L_{eq} to 70 dBA L_{eq}. Additionally, the average hourly noise levels during nighttime hours were measured at 66 dBA L_{eq} at the LT1 location (refer to Figure 6-1), which is representative of the noise environment in the immediate project area where the nearest sensitive receptors to the project's parking area are located. Thus, because the parking noise levels generated by the project at the nearest offsite sensitive receptors are well below the existing ambient daytime and nighttime noise levels in the project area, the noise levels generated by the project's parking-related activities would not result in any substantial increase in long-term noise levels at these offsite receptors. As these nearest receptors would not be exposed to a substantial increase in long-term noise levels from the project's parking area, the noise levels experienced at receptors that are farther from the project site would also not be substantial. While other parking-related noise sources such as tire squeal and car alarms could also be generated within the project's parking area, these noise sources only happen occasionally and the noise levels generated would not be of a magnitude that would present a nuisance unless sensitive land uses are located immediately adjacent to the parking area.

Mechanical Equipment

As part of the project, noise-generating mechanical equipment at the project site would include roof-mounted HVAC equipment and a potential emergency generator located on the ground level. Noise from the rooftop HVAC units would be generated when the equipment is in operation throughout

[8] Personal communication with Ohaji Abdallah of City of Los Angeles Bureau of Engineering on March 25, 2021.

[9] The resulting noise level at SR-3 accounts for noise attenuation provided by the commercial use located at the northwest corner of Slauson Avenue and Normandie Avenue.

the day. However, because the proposed building will be three-stories in height, the HVAC units would be situated at a higher elevation than the existing nearest sensitive receptors, most of which are only one-story in height. This vertical distance would attenuate noise levels generated by the HVAC units. A total of five six-ton HVAC units are anticipated to be installed for the proposed project building. Based on representative manufacturer's specifications for a six-ton HVAC unit, noise levels generated by a single unit would be approximately 82 dBA at an assumed distance of 1 meter.[10] While the placement of these HVAC units has not been determined at this time as the proposed project is in the conceptual design phase, for the purpose of this analysis it is assumed that the five HVAC units would be distributed in a linear fashion across the rectangular-shaped building and equidistant from each other. Based on this distribution of the HVAC units on the rooftop the resulting noise levels at the nearest surrounding sensitive receptors to the project site were estimated. As part of the project's BMPs, all of the roof-mounted HVAC equipment will be properly screened from view by neighboring land uses with a structural parapet. The screening provided by the structural parapet on the rooftop would provide an approximately 5 dBA attenuation of the noise levels generated by the HVAC units. The project's rooftop HVAC equipment would generate the following noise levels at the nearest sensitive receptors to the project site:

- Approximately 43 dBA L_{eq} at SR-1
- Approximately 39 dBA L_{eq} at SR-2
- Approximately 36 dBA L_{eq} at SR-3
- Approximately 47 dBA L_{eq} at SR-4
- Approximately 40 dBA L_{eq} at SR-5

These noise levels at the nearest offsite sensitive receptors would be well below both the daytime and nighttime ambient noise levels in the project area (refer to Table 4-1). Overall, the operation of the project's rooftop HVAC units would comply with Section 112.02 of the LAMC, which prohibits noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level on the premises of other occupied properties by more than 5 dBA, and would not generate substantial noise level increases at nearby offsite sensitive uses. As the nearest offsite sensitive receptors would not be exposed to a substantial increase in long-term noise levels from the project's rooftop HVAC units, the noise levels experienced at other receptors farther from the project site would also not be substantial.

Additionally, the proposed project could also potentially include an emergency generator onsite. Given that the proposed project is currently in the conceptual design phase, the location of a potential emergency generator has not been determined at this time but is anticipated to be located on the ground floor of the new building. This emergency generator would generally be operated periodically for testing and maintenance purposes as well as during times of electrical power failure at the project site. As part of the project's BMPs, this emergency generator will be housed in an enclosure and located within a designated mechanical room. Based on the manufacturer's specification sheet for a generator enclosure, the generator's attenuated noise levels from the enclosure would be approximately 63 dBA at a distance of 23 feet.[11] In addition, placement of the

[10] The specification sheet is located in Appendix B of this report. As there is no reference distance for the noise level in the specification sheet, it is assumed that the reference distance is at 1 meter.

[11] The specification sheet is located in Appendix B of this report.

emergency generator in a designated mechanical room would further provide a minimum additional noise attenuation of 10 dBA. Of the offsite sensitive receptors that currently surround the project site, the nearest would be at the SR-5 location which is located approximately 60 feet east of the project site boundary. Under a worst-case scenario where the emergency generator is located within a mechanical room at the easternmost edge of the proposed building, the noise levels at the SR-5 location would be approximately 45 dBA L_{eq}, which would be well below the daytime and nighttime ambient noise levels in the project area. The resulting noise levels at other offsite sensitive receptor locations that are located further away from the project site property line would be lower than 45 dBA L_{eq}. It should be further noted that noise levels from the emergency generator would not occur on a frequent basis or for prolonged periods of time at the project site, as its operation would mainly occur during electrical power outages that are often short-lived. Additionally, its operation for the purposes of testing and maintenance would also only occur for a limited duration over the course of a day and would generally would not take place during the more noise-sensitive nighttime hours. Thus, the operation of an emergency generator at the project site would not generate substantial noise level increases at nearby offsite sensitive uses.

Outdoor Amenity Areas

The project would include an enclosed outdoor play area associated with the onsite child care center. This enclosed play area would be placed on the south side of the new building facing the proposed passive park area and Budlong Avenue, and would be shielded from Slauson Avenue with solid concrete masonry unit (CMU) block walls and vegetated walls. The nearest offsite sensitive receptor to this enclosed play area would be the single-family residential dwelling at the SR-5 location, which would be located approximately 200 feet away to the east. However, this residential property would not have a direct line-of-sight of the play area as it would be partially shielded by the existing industrial and commercial uses located adjacent to the project site to the north.

It is assumed that up to 20 children may be gathered at the enclosed play area at a given time. For the purpose of providing a quantitative analysis, it is assumed that 50 percent of the children gathered in the play area would be talking concurrently at any given moment. Of this group, five children will be speaking with a “raised” voice, three would be speaking with a “loud” voice, and two would be shouting. Based on the distance from the outdoor play area to the nearest offsite sensitive receptor at the SR-5 location and published data for human speech noise levels along with accounting for noise attenuation provided by the play area walls and existing industrial and commercial uses, the resulting noise level at the SR-5 location would be approximately 40 dBA L_{eq}. This noise level would be below the daytime and nighttime noise levels measured in the project area vicinity. Noise sensitive receptors that are located further away from the outdoor play area would be exposed to even lower noise levels. As such, noise levels generated at the outdoor play area would not generate substantial noise level increases at nearby offsite sensitive uses.

The proposed project would also have rooftop meeting spaces for small meetings. However, relative to the child care center outdoor play area, the noise levels generated at these small meeting spaces would be much lower as voice levels at these meetings would generally not reach “loud” or “shouting” levels. Noise generated from people speaking or conversing at these meetings would likely be barely audible beyond the project site. As such, the rooftop meeting spaces would not generate substantial noise level increases at nearby offsite sensitive uses.

6.4.3 Vibration

Project Construction

The operation of heavy construction equipment at the project site would generate groundborne vibration that could affect nearby structures to the project site. These vibration levels could also cause an annoyance to people at those locations. The closest existing structures to the project site are the existing industrial and commercial uses located directly adjacent to the north. The nearest sensitive receptor structures to the project site would be the residential uses located around the project site (i.e., SR-1 through SR-5). For the purpose of this analysis, all of the nearest surrounding residences are considered to fall under the "older residential structures" category under Caltrans vibration guidelines. The commercial and industrial buildings located directly adjacent and north of the project site, which appears to be older structures that do not necessarily qualify as "modern industrial/commercial buildings" under Caltrans vibration guidelines, are also conservatively evaluated as "older residential structures" in this analysis. Referring to the Caltrans guideline criteria in Table 5-1, the PPV thresholds for potential building damage from continuous and frequent intermittent sources are 0.3 in/s for older residential structures.

The proposed project, which would be constructed with the use of pre-approved modular shipping container building manufacturers, would not require high-impact construction methods such as pile driving or blasting. As such, groundborne vibration would be generated from conventional heavy construction equipment, such as bulldozers, backhoes, loaders, and excavators, during project construction. These mobile equipment would be located at various distances from nearby offsite receptors throughout the day as they operate across the project site. Throughout the course of a construction day, the majority of the equipment would primarily operate near the center alignment of the project site, with certain equipment periodically operating closer to the project site boundaries. Given the room needed for the mobile equipment to maneuver within the site, it is not anticipated that the equipment would come within approximately 10 feet from adjacent structures. Similar to the construction noise analysis, source-to-receptor distances used in this vibration analysis are the acoustical average distances between the project site and each receptor to reflect the assumed distribution of equipment across the project site.

Table 6-7 shows the estimated construction-related groundborne vibration levels that could occur at the nearest offsite structures to the project site, based on the use of either large (full-size) or smaller (mini-size) mobile equipment (e.g., bulldozers, backhoes, loaders), and the resulting vibration impacts at these locations related to potential building damage and human annoyance. Detailed calculations are provided in Appendix C.

Table 6-7. Groundborne Vibration Levels at Off-Site Receptor Locations

Off-Site Receptor Location	Large Mobile Equipment[a]			Small Mobile Equipment[b]		
	Estimated PPV (in/s)	Building Damage?[c]	Human Response[d]	Estimated PPV (in/s)	Building Damage?[c]	Human Response[d]
1. Nearest single- and multi-family residential uses located north of the project site, across West 58th Street.	0.007	No	Below barely perceptible	<0.001	No	Below barely perceptible
2. Nearest multi-family residential use located northwest of the project site, across Normandie Avenue.	0.009	No	Below barely perceptible	<0.001	No	Below barely perceptible
3. Nearest single-family residential use located west of the project site and behind an existing commercial property, across Normandie Avenue.	0.006	No	Below barely perceptible	<0.001	No	Below barely perceptible
4. Nearest single-family residential use located south of the project site, across Slauson Avenue.	0.020	No	Barely perceptible	0.001	No	Below barely perceptible
5. Nearest single-family residential use located east of the project site, across Budlong Avenue.	0.022	No	Barely perceptible	0.001	No	Below barely perceptible
6. Existing industrial and commercial uses directly north of project site.	0.082	No	Distinctly perceptible	0.003	No	Below barely perceptible

[a] Representative of any full-size/large excavator, dozer, loader, etc.
[b] Representative of any small excavator, dozer, loader, etc.
[c] For the purpose of this analysis, all of the nearest surrounding residences are considered to fall under the "older residential structures" category under Caltrans vibration guidelines. The commercial and industrial buildings located directly adjacent and north of the project site, which appears to be older structures that do not necessarily qualify as "modern industrial/commercial buildings" under Caltrans vibration guidelines, are also conservatively evaluated as "older residential structures" in this analysis. Referring to the Caltrans guideline criteria shown in Table 5-1, the PPV threshold for an older residential structure is 0.3 in/s.
[d] Refer to PPV = peak particle velocity
Table 5-2 for Caltrans vibration annoyance criteria.

As shown in Table 6-7, even with the use of large, full-size mobile equipment at the project site the vibration levels generated during project construction would not exceed the applicable vibration criteria for building damage or human annoyance at the nearest surrounding existing offsite structures. Of the nearby receptors analyzed in Table 6-7, only the existing industrial and commercial uses located directly adjacent to the project site would experience distinctly perceptible vibration levels, while all of the other receptors would experience vibration levels that are either barely perceptible or below barely perceptible. While vibration during project construction would be distinctly perceptible at times at the existing industrial and commercial uses, these occurrences would only occur briefly throughout the day when a large mobile equipment is operating near the project site boundary directly adjacent to these uses. Once the equipment moves to another location within the project site that is farther away the vibration levels would dissipate rapidly and would be barely perceptible. Additionally, industrial and commercial land uses are not considered to be vibration-sensitive uses as these locations do not involve people trying to relax or sleep. As shown in Table 6-7, the vibration levels at all of the nearby sensitive land uses to the project site would be either barely perceptible or barely perceptible. Consequently, offsite receptors farther from the project site would also not be exposed to excessive groundborne vibration levels during project construction.

Project Operation

As the project is a multi-faceted facility that serves as a recreation and community center, there would be no major sources of vibration resulting from operation of the project. While operation of onsite mechanical equipment such as HVAC equipment could produce low levels of vibration, these vibration levels would only occur in the immediate area where the equipment is located within the project building and would not result in any impacts at nearby offsite structures. Given that the operation of construction equipment at the project site would not result in vibration levels that would exceed the applicable vibration criteria for building damage or human annoyance at the nearest surrounding offsite structures (refer to Table 6-7), any vibration levels generated by the project's onsite mechanical equipment would also not result in perceptible vibration levels at nearby offsite structures. Therefore, operation of the project would not result in vibration levels that would adversely affect the nearest offsite receptors to the project site.

Quiet Connect™ Series RS40

Features and benefits

Robust product design and testing - The generator is designed to operate under extreme environmental conditions including cold weather starts at as low as -40 ºF. The generator is tested and certified per the latest EPA, UL and IBC Seismic standards and is capable of meeting NFPA110 requirements when equipped with the necessary accessories and properly installed.

Flexible Exercise mode - The innovative, flexible exercise mode enables the generator to exercise at a time, frequency and duration that suits the customer's preference - as little as 2 minutes every 6 months - reducing unnecessary fuel consumption, emissions and noise.

Advanced Enclosure Design - The aesthetically appealing enclosure incorporates special designs that deliver the quietest generator of its kind. Aluminum material plus durable powder coat paint provides the best anti-corrosion performance. The generator set enclosure has been evaluated to withstand 180 MPH wind loads in accordance with ASCE7-10. The intelligent design has removable panels and service doors to provide easy access for service and maintenance.

Self diagnostics and easy service - The generator is equipped with Cummins PowerCommand electronic control to provide industry-leading self diagnostic capabilities. In addition, critical components of the generator are designed to ensure service and preventive maintenance can be completed in a short period of time.

Weight, size and sound level

Weight: 1356 lbs (615 kg)
Size: Length 94 in (2388 mm), width 34 in (864 mm), height 45.5 in (1156 mm)
Sound: 63 dB(A) at 23 ft (7 m) with sound level 2 enclosure

Series	Model	Phase	Voltage (V)	Frequency (Hz)	Rated amps[1] (NG/LPV fuel)	Circuit breaker (Amps)

		3	277/480	60	60.2/60.2	80

[1] Derating guidelines: Engine power available up to 114m (375 ft) at ambient temperatures up to 40 °C (104 °F). Above these elevations derate at 4% per 305m (1000 ft) and 2% per 10 °C above 40 °C (104 °F).

©2015 Cummins Inc. | NAS-5778d-EN (4/15)

Product features

Engine

- Natural gas/propane 1800 rpm engine
- Engine air cleaner – normal duty
- Electronic governor, isochronous
- Engine starter, 12 VDC motor
- Shutdown – low oil pressure
- Extension – oil drain
- Engine oil

Fuel System

- Single fuel – natural gas or propane vapor, field selectable

Alternator

- 60 Hz, 1 phase, 4 lead, or 3 phase, 12 lead, 120 °C temperature rise at 40 °C ambient
- Exciter/voltage regulator – torque match

Control

- PowerCommand 1.1
- Display language – English
- Control mounting, right facing

Electrical

- Single circuit breaker, UL certified, right-side mounted
- Battery charging alternator, normal duty
- Battery charger – 6 Amp, regulated

Cooling

- Generator set cooling capability – 50 °C
- Shutdown – low coolant level
- Engine coolant – 50/50 mixture
- Extension – coolant drain

Enclosure

- Aluminum enclosure Sound Level 1 with muffler installed, sandstone color
- Wind rating – 180 MPH

Code compliance

- UL 2200
- EPA emissions, emergency, stationary, 40CFR60
- IBC Seismic
- NFPA110 capable

Generator set application

- Coolant heater
- Crank case vent heater
- Large battery rack
- Flexible fuel line
- Literature (English) – operator's manual, installation quick guide and manual, service manual

Warranty

- Base warranty – 2 year standby
- Extended warranties available

Packaging

- Shipping pallet, poly bag

Generator set performance

Governor regulation class: ISO 8528 Part 1 Class G3
Voltage regulation, no load to full load: ±1.0%
Random voltage variation: ±1.0%
Frequency regulation: Isochronous
Random frequency variation: ± 0.25% @ 60 Hz
Radio frequency emissions compliance: FCC code Title 47 part 15 Class B

Engine

Design: Turbo with after cooler
Bore: 86.5 mm (3.4 in)
Stroke: 100.0 mm (3.94 in)
Displacement: 2.4 liters (143.5 in^3)
Cylinder block: Cast iron, in-line 4 cylinder
Battery capacity: 550 amps at ambient temperature of 0 °F to 32 °F (-18 °C to 0 °C)
Battery charging alternator: 50 amps
Starting voltage: 12 volt, negative ground
Lube oil filter type(s): Spin-on with relief valve
Standard cooling system: 50° C (122° F) ambient cooling system
Rated speed: 1800 rpm

Fuel supply pressure

Minimum fuel supply pressure, kPa (in H_2O): 1.5 (6.0)
Maximum fuel supply pressure, kPa (in H_2O): 3.5 (14.0)

Control system

The PowerCommand® electronic control is standard equipment and provides total generator set system integration including automatic remote starting/stopping, precise frequency and voltage regulation, alarm and status message display, output metering, auto-shutdown at fault detection and NFPA 110 Level 1 compliance.

Sound attenuated enclosure

The aesthetically appealing enclosure incorporates special designs that deliver the quietest generator of its kind. Aluminum material plus durable powder coat paint provides the best anti-corrosion performance. The generator set enclosure has been evaluated to withstand 180 MPH wind loads in accordance with ASCE7-10. The intelligent design has removable panels and service doors to provide easy access for service and maintenance.

Accessories

- HMI211RS in-home display, including pre-configured 12” harness
- HMI211 remote display, including pre-configured 12” harness
- HMI220 remote display
- Auxiliary output relays (2)
- Auxiliary configurable signal inputs (8) and relay outputs (8)
- Annunciator – RS485
- Internet monitoring device – PowerCommand 500
- Battery chargers – stand-alone, 12V
- Enclosure Sound Level 1 to Sound Level 2 upgrade kit
- Enclosure paint touch up kit
- Base barrier – elevated generator set
- Alternator heater
- Maintenance and service kit
- Engine lift kit

WARNING:

Standby rating based on: Applicable for supplying emergency power for the duration of normal power interruption. No sustained overload capability is available for this rating. (Equivalent to fuel stop power in accordance with ISO3046, AS2789, DIN6271 and BS5514.) nominally rated. See T030.

WARNING:

Back feed to a utility system can cause electrocution and/or property damage. Do not connect to any building electrical except through an approved device or after building main breaker is open.

Transfer switch (sold separately)

- Automatic Transfer Switches available in various amperages.
- Service Entrance models are also available, which helps reduce the installation cost.
- All models UL listed to UL 1008 standard.
- Available for both Indoor and Outdoor applications.
- Compatibility with Cummins generator set helps reduce the installation time for the complete application.

Warranty policy

The Cummins RS and RX liquid cooled generator set models come with a 2 year base warranty when used in EPA-Stationary Emergency application. The RA series Automatic Transfer Switches come with a 2 year base warranty. Extended warranty options are available. Please contact Cummins dealers/distributors for details.

After sale support

Largest distributor/dealer support network

Cummins Power Generation generator sets are supported by the largest and best trained worldwide certified distributor/dealer network in the industry. The network of knowledgeable and highly trained dealers will help you select the right generator for your application and advise you on associated accessories for your generator. The dealer network can also help answer any questions you may have regarding operation and maintenances requirements of the generators. This same network offers a complete selection of commonly used generator set maintenance parts, manuals and specification sheets.

Manuals: Operation and installation manuals ship with the generator set. To obtain additional copies or other manuals for this model, see your distributor/dealer. To easily locate the nearest certified distributor/dealer for Cummins generators in your area, or for more information, contact us at 1-800-344-0039 or visit power.cummins.com.

Contact your distributor/dealer for more information.

1 INTRODUCTION

Ninyo & Moore was retained by ICF International (herein referred to as the client) to perform a review of historical and available environmental documents review for the proposed location of a new Recreation and Community Center building at 5820 Normandie Avenue in Los Angeles, California (hereinafter referred to as the site; Figure 1). We understand the Project will preliminarily consist of construction of a new three-story 20,000 square-foot multi-use facility building, containing conference rooms, multipurpose classrooms, career and social counseling center, community room, facility support space, and an extensive green roof. The area of the proposed Recreation and Community Center is currently a lot undergoing development, north of Slauson Avenue, between South Budlong and South Normandie Avenues. The following sections discuss the purpose, the involved parties, the scope of services, and the limitations and exceptions associated with the historical document review.

1.1 Purpose

The purpose of this historical document review was to evaluate the likelihood of hazardous substances that may be present in soil, soil vapor, or groundwater beneath the site as a result of past and present on-site or off-site activities. To evaluate the likelihood of encountering hazardous substances during construction activities, Ninyo & Moore performed a limited evaluation of properties adjoining the site. A limited ASTM International (ASTM) 2013 standard was used to evaluate the site, which did not include a site visit, interviews or user questionnaires. A database radii search of 1-mile was used to assess potential impacts to the site.

1.2 Scope of Services

Ninyo & Mooreûs scope of services for this historical document review consisted of the activities listed below.

- Reviewed physical setting and background information.
- Reviewed federal, state, tribal, and local regulatory agency databases for the site and for properties located within a specified radius of the site.
- Reviewed historical information for the site, such as historical aerial photographs, historical topographic maps, reverse street directories, and Sanborn fire insurance maps.
- Reviewed other documents provided from third party sources, as available.
- Prepared this report, summarizing findings and providing opinions and conclusions regarding recognized environmental conditions (RECs) at the site.

1.3 Approach

The emphasis of our evaluation included on-site and off-site properties which adjoin the site. The properties were evaluated according to the degree of impact as follows:

- **Considered Free of Significant Hazardous Waste** ï Property which uses or stores hazardous materials but with no significant violations, known releases, or evidence of inadequate chemical-handling practices. Example properties would be fully-licensed and maintained, active underground storage tank (UST) or dry cleaning facilities with no documented releases or properties that are not adjacent to the site and remediation of previous releases had been conducted.

- **Further evaluation is needed** ï Property with potential or suspected impact within the area of the project. Examples of properties in this category would be leaking UST (LUST) properties in the vicinity of the site that are in the last stages of remediation or in post-remediation monitoring. LUST properties adjacent to the site are considered to be in this category, regardless of case status (unless ranked higher), as deed restrictions may exist for closed LUST cases. A second example would be a property within or adjoining the site with known use or storage of hazardous materials which had received violation notices from an inspecting agency or where visual evidence of inadequate chemical and storage practices (such as significant staining) were observed but where no environmental assessments had occurred. Also included in this category are facilities within or adjoining the site where USTs were suspected to have been present, but seemed to been abandoned by their former operators.

- **Contamination Indicated on Property** ï Property with known or probable contamination within the area of the project. An example of a property in this category would be a LUST property where remediation had not been started or was not yet finished.

1.4 Significant Assumptions

Ninyo & Moore assumes the information sources from the third-party environmental database vendor and regulatory agencies utilized for this report provided adequate and accurate information. Other significant assumptions were not made during the preparation of this report.

1.5 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard of care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. No site visit was conducted as part of this study.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.6 Special Terms and Conditions

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, unless otherwise indicated in this report, this historical document review does not include analysis of the following, which is not intended to be all-inclusive: asbestos-containing materials, methane gas, lead-containing surfaces, underground pipelines, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, or high voltage power lines.

1.7 User Reliance

This report may be relied upon by, and is intended exclusively for, the client and its assigns. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than these is undertaken at said parties sole risk.

1.8 Involved Parties

Mr. Dennis Fee, Project Engineer, performed historical research and document review. Mr. Patrick Cullip, Project Engineer, and Mr. John Jay Roberts, Principal Geologist, performed quality review.

2 SITE DESCRIPTION

The following table provides a general description of the subject site.

Table 1 ï General Site Setting	
General Site Setting	**Description**
Location	The site is located at 5820 Normandie Avenue in Los Angeles, California (Figure 1).
Assessor Parcel No.	5002-015-900 (County of Los Angeles)
Property Owner	Los Angeles County Metropolitan Transportation Authority (based on review of Environmental Data Resources, Inc. (EDR)-provided information)
Size (approximate)	2.3 acres (approximate) and approximately 1,250 feet long (east-west) by 80 feet wide (north-south).
Site Use / Occupants	The site is currently unoccupied and is under development.
Structures	Major structures are not present on the site based on a review of Google Earth images and aerial photographs.
Roads	The site is bound to the south by Slauson Avenue, to the east by South Budlong Avenue, and to the west by South Normandie Avenue.
Heating and Cooling Systems	Based on Google Earth image, not present at the site.
Electricity Provider	Los Angeles Department of Water and Power
Sewer Disposal Provider	Los Angeles Sanitation & Environment (LASAN)
Potable Water Provider	Los Angeles Department of Water and Power
Natural Gas	The Southern California Gas Company
Site Vicinity Description	Based on Google Earth image, adjoining properties to the north and south of the site are primarily industrial, although the general site vicinity is composed of mostly residential properties.

3 RECORDS REVIEW

The following sections summarize records reviewed for the site.

3.1 Standard Environmental Record Source - Environmental Database Search

A computerized, environmental information database search was performed by EDR on March 12, 2021. The search included federal, state, tribal, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted properties of potential environmental concern, is presented in the EDR report (Appendix A). The review was conducted to evaluate whether the site or properties within the site vicinity have been documented as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

3.1.1 Geocoded (Mapped) Listings

Properties within up to one-mile radius of the site were listed on various regulatory agency databases. The following table lists databases that were searched and the number of listings (excluding non-geocoded [unmapped] properties).

Table 2 ï Summary of Database-Provided Information		
Database Name	Search Radius (mile)	Number of Listings

Notes:
DTSC ï Department of Toxic Substances Control
TP ï Target Property
LUST ï Leaking Underground Storage Tank
RCRA ï Resource, Conservation, and Recovery Act

The site was not listed on any of the searched databases. Off-site properties/facilities listed in the database report were evaluated as to their potential to impact soil, soil vapor, and/or groundwater at the site. To supplement the information in the EDR report, the State Water Resources Control Board (SWRCB) GeoTracker (SWRCB, 2020) and Department of Toxic Substances Control (DTSC) EnviroStor databases (DTSC, 2020) were reviewed. Information from the EDR database report and supplemental sources is included in the facilities of

potential concern summaries below. The following properties/facilities were interpreted to represent a potential environmental concern to the site, based on their proximity to the site, the nature of the database on which they are listed, and/or the assumed direction of the groundwater flow in the site vicinity (southeast).

Table 3 ï Summary of Off-Site Facilities of Potential Concern

Facility Name/ Address	Distance/ Direction from Site (Approximation by EDR)	Database	Summary
Palmer W R 1360 W Slauson Ave	Adjoining to the south	EDR Hist Auto	Palmer W R was listed as a gasoline and oil service station in 1942. Additional information was not provided.
Southwest Plating Company, LLC/ Low W L 1344 W Slauson Ave	Adjoining to the south	SEMS RCRA-LQG EnviroStor Hist UST FINDS ECHO EMI WDS HWTS CERS Haz Waste HAZNET HAZMAT CERS Hist UST EDR Hist Auto	Southwest Plating was listed under the EnviroStor database as a cleanup case adjoining to the site to the south. According to the EnviroStor database, this facility has been in operation since 1943 and currently performs cadmium, chrome, nickel, and silver plating on aerospace fasteners. During an inspection in January 2000, Certified Unified Program Agency (CUPA) investigators observed a yellow residue on the ground surface next to the chromium plating tank. Follow-up samples in different hot spots exhibited elevated levels of metals and total cyanide. This facility has a status of Refer: EPA as of October 30, 2018. It was noted that a groundwater investigation has not been conducted at this facility. This facility was listed on the SEMS database as ñSI Start Neededò. Hazardous waste generated at this facility includes organic waste, alkaline solution, liquid with high levels of metals, and liquids with cyanides. This facility also contained a historical 405-gallon waste oil UST.
Edmonds Chas 1346 W Slauson Ave	Adjoining to the south	EDR Hist Auto	Edmonds Chas was listed as a historical automotive repair and service station in 1929. Additional information was not provided.
Miller Walter 1218 W Slauson Ave	Adjoining to the south	EDR Hist Auto	Miller Walter was listed as a historical automotive repair station in 1942. Additional information was not provided.
Dirty Laundry Inc/ Town Wash Laundry 1232 W Slauson Ave	Adjoining to the south	EDR Hist Cleaner RCRA SQG FINDS ECHO	Town Wash Laundry was listed as a dry cleaning plant between 2012 and 2014. Dirty Laundry Inc. was listed as a small quantity generator of hazardous materials in 1992.
Foster Planning Mill 1258 W 58th St	Adjoining to the north	SWEEPS UST Hist UST CA FID UST HAZMAT WDS CIWQS CERS Hist UST NPDES	Foster Planning Mill was listed on multiple UST databases for a 250-gallon tank containing unleaded waste oil and a 280-gallon tank containing regular unleaded gasoline. This facility was also regulated under the National Pollutant Discharge Elimination System (NPDES) with the Regional Water Quality Control Board (RWQCB) for industrial storm water runoff. Violations due to late report submittals to the RWQCB were noted.
Luther F L/ Slauson Auto Restoration 1212 W Slauson Ave	Adjoining to the south	HWTS CERS Haz Waste HAZNET HAZMAT RCRA Nongen/NLR EDR Hist Auto	Luther F L was listed as a historical automotive repair shop from 1933 to 1995. Slauson Auto Restoration was listed as a generator of hazardous waste from 2005 to 2019. Violations noted included the failure to maintain manifests of hazardous waste disposal, and an inactive EPA ID number.
MJW Inc DBA American Lab & Systems/ Adesco Inc 1328 W Slauson Ave	Adjoining to the south	HWTS CERS Haz Waste HAZNET HAZMAT CERS EnviroStor RCRA-SQG FINDS ECHO SEMS-Archive	American Lab & Systems (formerly Adesco Inc,), was listed on the EnviroStor database as a historical cleanup case. According to EnviroStor, waste oil and drums containing tetrachloroethylene (PCE) waste were removed in 1986. No further action was recommended due to no evidence of onsite disposal, releases, or past violations. The facility has a status of Refer: Other Agency as of August 31, 1995. American Labs, Inc. was also listed as a hazardous waste generator from 2001 to 2020. Waste included aqueous solutions and hydrocarbon solvents. Minor violations were noted including failure to submit elements of a hazardous materials business plan, failure to properly label waste oil drums, and failure to establish an emergency response/ contingency plan.

Table 3 ï Summary of Off-Site Facilities of Potential Concern

Facility Name/ Address	Distance/ Direction from Site (Approximation by EDR)	Database	Summary
Puritan Soft Water Laundry 1348 W Slauson Ave	Adjoining to the south	EDR Hist Cleaner	Puritan Soft Water Laundry was listed as a historical laundry in 1924, 1929, and 1933. Additional information was not provided.
All Roofing & Building Material/ Allied Building Products Corp 1212/1234/1318 W 58th St/ W 58th St	Adjoining to the north	SWEEPS UST CA FID UST HAZMAT CERS Hist UST UST HWTS Haznet	All Roofing & Building Material was listed as a generator of hazardous waste between 1993 and 1998. Hazardous waste included tank bottom waste with halogenated organics. This facility also contained two USTs: a 1,000-gallon gasoline and a 1,000-gallon diesel UST. Allied Building Products Corp. was listed as a generator of hazardous waste in 2016 and 2017. Violations noted included the failure to submit a hazardous materials business plan, failure to establish an adequate training program and emergency response plan, and the failure to report a release or threatened release to the unified program agency.
1226 W 58th St	Adjoining to the north	UST	A historical UST was reported at 1226 W 58th St. Further information was not provided.
Rapid Anodizing Inc 1216 W Slauson Ave	Adjoining to the south	HWTS CERS Haz Waste CERS HWTS Haznet Hazmat LA Co. Site Mitigation RCRA Nongen/NLR	Rapid Anodizing LLC was listed as a generator of hazardous wastes between 2006 and 2019. Hazardous wastes included organic solids, alkaline solution with metals, acidic liquid, and unspecified solvent mixtures. Violations noted included the failure to prepare hazardous waste management plans and annual reports, mislabeling of oil buckets, the failure to submit an emergency response plan, and the buildup of residue in secondary containment.

The reported historical presence of USTs, former drycleaners, and listed releases of volatile organic compounds (VOCs) indicate that the site may have been impacted by the adjoining properties listed above (i.e., a vapor encroachment condition [VEC]). Research of available records from for these facilities is recommended to evaluate the potential VEC for the site.

It is our opinion that there is a low likelihood that the listings for the other off-site properties listed in the database report represent a REC to the site at the current time. This opinion is based on one or more of the following factors:

- The nature of the database(s) on which the property is listed, and/or because the property was not listed on a database that reports unauthorized releases of hazardous substances;
- Reported regulatory agency status (i.e., case closed);
- Reported nature of the case (i.e., soil contaminated only);
- Reported distance of the property from the site; and/or
- Location of the property in relation to the site with respect to topography or expected groundwater flow direction (southeast).

3.1.2 Non-Geocoded (Unmapped) Listings

Unmapped properties are shown by EDR as Orphan Sites. Three unmapped facilities were included in the EDR Radius Map Ê report. Based on our review of the unmapped listings,

two of the facilities are not within the applicable search radii and have a low likelihood to have negatively impacted the site. One of the facilities listed was the Metro Rail to River Project, which encompasses the railroad right-of-way (ROW) from West 67th Street and 11th Avenue to Slauson Avenue and Santa Fe Avenue. This stretch of ROW includes the site. The listing was under the EnviroStor and Voluntary Cleanup Program (VCP) databases for the agreement between the Los Angeles County Metropolitan Transportation Authority (Metro) and DTSC to perform sampling and soil removal activities along the railroad ROW. Activities mentioned on EnviroStor included various conference calls and work plans between April and December 2017 regarding recommendations for additional soil sampling and removal based on data comparison to screening levels. These documents have been requested but have not been received, apart from what is summarized in Section 3.4. The presence of a railroad ROW on the site is further discussed in Section 3.3.3.

3.2 Physical Setting

The following table summarizes topographic, geologic, and hydrogeological conditions in the vicinity of the site, based upon the referenced documents review and/or our visual reconnaissance of the site.

Table 4 ï Physical Setting

Physical Settings	Reference	Summary
Topography	A, B	The site elevation is approximately 140 feet above mean sea level (MSL). The site vicinity is relatively flat, with regional topography sloping gently to the southwest.
Geology	C,D	The site is located within the Downey Plain of the Los Angeles basin, which is bounded to the northwest by the Santa Monica Mountains, the northeast by the Merced and Puente Hills, the southwest by the Pacific Ocean, and to the southeast by the Orange County Boundary. The site is underlain by young Quaternary alluvium surficial sediments consisting of gravel, sand, and clay mainly derived from the Santa Monica Mountains.
Surface Water	E	The nearest surface water body is the Los Angeles River, a concrete-lined river channel located approximately 4.75 miles northeast of the site.
Groundwater	F,G	The site is located in the Central Groundwater Basin of the Los Angeles County Coastal Plain. Existing beneficial uses of the Central Basin include municipal, agricultural, and industrial use. On-site groundwater data was not available. The groundwater elevation was measured in December 2020 in 16 wells located at the Pizza Hut Site #11-7488 approximately 3,000 feet west of the site. Groundwater depth ranged between 14 to 26 feet below top of casing (at elevation approximately 107 to 119 feet amsl). Groundwater flow was interpreted to be generally towards to the southeast at an approximate gradient of 0.04 foot/foot.

3.3 Site Historical Use Information

Ninyo & Moore conducted a historical record search for the site. This included a review of city directories, historical fire insurance maps, historical aerial photographs, topographic maps, and building department records. The following sections summarize information obtained from the historical sources utilized for this assessment.

3.3.1 City Directories

Available historical reverse street directories from 1920 through 2015 were researched by EDR. Entries under the site address of 5820 Normandie Avenue were not found. Adjoining properties to the north and south were listed as a mixture of residential and commercial properties. Commercial/industrial properties of note bordering the site to the north include the following:

- **1212 West 58th Street** ï Lesco Material Corporation (1958, 1967, 1976, 1994, 1999, 2004, 2006, 2015), All Roofing & Building Materials (1967, 1970, 1975, 1976, 1980, 1985, 1991, 1994, 1995, 1999, 2006, 2009)
- **1258 West 58th Street** ï Foster Planning Mill Co. (1958, 1967, 1976, 1994, 1999, 2004, 2006, 2009)
- **1318 West 58th Street** ï All Roofing & Building Materials Corp (1958), Various Roofing Companies (1967, 1976), Bob Najiebs Hauling & Cleanup (1994), Jims Machine Shop (1994, 1999)
- **5810 Normandie Avenue** ï S Normandie Sealy Mattress Co (1951), Various Furniture and Garment Stores (2000)

A full list of the City Directory Report provided in Appendix B.

3.3.2 SanbornÈ Fire Insurance Maps

SanbornÈ Fire Insurance maps were provided for the site and vicinity for select years between 1922 through 1970. The Certified Sanborn Map Report is provided in Appendix B.

Table 5 ï Sanborn® Fire Insurance Maps Summary

Date	Summary
1922 1923	The site was depicted as a ROW for the Atchison, Topeka, and Santa Fe (ATSF) Railroad Redondo Branch, north of West Slauson Avenue, East of S. Normandie Avenue, and west of Budlong Avenue. The site contained a main track and a side track connected to a platform. Adjoining to the north of the site was vacant land and a number of industrial properties including a couple sawmills, lumber storage yards, and woodworking shops. Adjoining to the south, beyond Slauson Avenue, were a number of residential structures, a sheet metal manufacturer, a steam laundry facility, and a lumber company. Adjoining to the east was vacant land, and to the west was lime & plaster storage. The ATSF ROW also continued in the east-west direction.
1950 1951	The site remained relatively unchanged. New facilities were developed adjoining to the north, including Sealy Mattress Co., ñLadies Heel Manufacturingò, a sheet metal workshop, a roofing material warehouse and storage yard, and a new lumber mill. Residential properties were developed to the east. To the south, new commercial and industrial structures were developed including an auto parts rebuilding shop, an appliance repair and refinishing shop, and gasoline service stations at the southeast and southwest corners of Normandie Avenue and Slauson Avenue.

Table 5 ï Sanborn® Fire Insurance Maps Summary	
Date	Summary
1954	The on-site railroad platform was no longer present. A new roofing and building material warehouse replaced the ladies heel manufacturing plant.
1957	A beer warehouse was added to the north adjoining the site. A lumber mill was removed adjoining the site to the north.
1958	The Sealy Mattress Co. was replaced with a record company.
1959 1960 1961	A building material warehouse and storage yard was depicted adjoining the site to the west across from Normandie Avenue. A roofing and insulation warehouse was erected adjoining the site to the north.
1966 1968	The beer warehouse and sheet metal shop adjoining the site to the north was replaced with van storage.
1969 1970	A number of commercial/industrial properties were depicted adjoining the site to the south, beyond Slauson Avenue, including an auto waxing shop, laundry cleaner, metal plating shops, an electric motor repair shop, and a parts reassembly shop. A number of residential structures were also developed.

3.3.3 Historical Aerial Photographs

Historical aerial photographs were provided by EDR for select years from 1923 through 2016. A 2020 aerial photograph was reviewed online using Google Earth Ê. A listing of the photographs reviewed and summary of notable observations from the photograph review are provided in the table below. EDR-provided aerial photographs are included in Appendix B.

Table 6 ï Aerial Photographs Summary			
Date	Source	Site Summary	Site Vicinity Summary
1923	A	The site was depicted with railroad tracks, rail vehicles, and a small railroad station.	Adjoining the site to the east, beyond S. Budlong Avenue, was an empty field. Adjoining the site to the south was Slauson Avenue, beyond which were residential properties. Adjoining the site to the north and west were commercial and industrial properties.
1928 1938 1947	A	The site was similar to that observed in the 1923 aerial photograph.	Residential structures were being developed to the east. Commercial and industrial structures were developed to the north of the site.
1952 1954	A	The railroad station was removed from the site.	The site vicinity was depicted similar to that observed in the 1947 aerial photograph.
1964	A	The site was depicted similar to that observed in the 1964 aerial photograph.	A large commercial building was developed adjoining the site to the north.
1970	A	An area of potential dark-stained soil is present on the western portion of the site near a rail vehicle.	The site vicinity was depicted similar to that observed in the 1964 aerial photograph.
1979	A	Area of staining no longer present. A white line indicating fresh pavement and painting along the tracks was present on the site.	The site vicinity was depicted similar to that observed in the 1970 aerial photograph.
1983 1989 1994 2002 2005	A	A soil stockpile was observed in the eastern portion of the site by 1983 and removed by 1989.	A commercial building adjoining the site to the north was demolished and removed.
2009 2012 2016	A	Vehicles were parked on the western portion of the site, potentially associated with a vehicle parking area and scrap yard adjoining to the north.	The site vicinity was depicted similar to that observed in the 2005 aerial photograph.

Table 6 ï Aerial Photographs Summary			
Date	Source	Site Summary	Site Vicinity Summary
2020	B	The site was under construction, with the eastern portion of the site covered with tarped soil stockpiles, and the western portion of the site containing construction vehicles and supplies. The railroad tracks were not visible.	The site vicinity was depicted similar to that observed in the 2016 aerial photograph.

Sources:
A ï Environmental Data Resources, Inc.
B ï Google EarthÊ

The site has been a railroad right-of-way (ROW) along Slauson Avenue to the south between 1923 and 2016. The on-site railroad tracks may have been buried or removed from the site as early as 2020. The site vicinity has consisted primarily of residential properties since 1923, although adjoining properties to the north have contained a number commercial/industrial structures since 1923.

Equipment and materials often historically used in association with railroads, such as lead, ballast materials containing steel slag with potential regulated heavy metal concentrations, total petroleum hydrocarbon fuel leaks, polychlorinated biphenyl (PCB) leaks, and railroad lubricators utilizing petroleum products, normally have been used within the site. In addition, herbicides were often historically applied on railroad ROWs to prevent the growth of vegetation between railroad tracks. The presence of railroad tracks between 1923 and 2016 and associated staining observed in the 1970 aerial photograph is considered a REC.

3.3.4 Historical Topographic Maps

Historical topographic maps for select years between 1896 and 2012 were provided by EDR from the Redondo and Santa Monica (1896), Watts (1923, 1924, 1937), Inglewood (1924, 1930, 1948, 1950, 1952, 1953, 1964, 1966, 1972, 1981, and 2012), and Hollywood (1924, 1952, 1953, 1964, 1966, 1972, 1981, 2012) California Quadrangle Maps. Copies of the historical topographic maps are included in Appendix B.

Table 7 ï Historical Topographic Maps Summary		
Date	Site Summary	Site Vicinity Summary
1896	The site was depicted as vacant land.	The site vicinity was primarily vacant land. The ATSF Railroad was present to the south. The Redondo Railroad was present to the east.
1923 1924	The site was depicted with railroad tracks	Commercial/industrial structures were present adjoining the site to the north and south. The site vicinity to the east consisted primarily of vacant land.
1930	The site was not mapped.	Residential structures were developed to the west of the site.

Table 7 ï Historical Topographic Maps Summary		
Date	**Site Summary**	**Site Vicinity Summary**
1937	The site is similar to that depicted in the 1924 topographic map.	Additional commercial/industrial structures were developed adjoining the site to the north and south. Residential structures were developed to the east.
1948 1950 1952	The site is similar to that depicted in the 1937 topographic map. The site was shaded for urban development by 1950.	ñBM 138ò surveying station present adjoining the site to the west. The site vicinity was shaded for urban development by 1950.
1964 1972 1981	The site is similar to that depicted in the 1952 topographic map.	ñBM 137ò surveying station present adjoining the site to the west. The site vicinity was labeled as Wildasin.
2012	The site and vicinity were depicted similar to their current configuration. Structures were not depicted on the site or site vicinity.	The site and vicinity were depicted similar to their current configuration. Structures were not depicted on the site or site vicinity.

3.4 User-Provided Documents

Documents provided to Ninyo & Moore for review by the user of this report included a California Environmental Quality Act (CEQA) Notice of Exemption, Documentation for Categorical Exclusion under the National Environmental Policy Act (NEPA), and a Percolation Test Report. Documents are presented in Appendix C. The following is a summary of our review.

3.4.1 Notice of Exemption (Metro, 2017a)

This 2-page document discusses the Metro Rail to Rail Active Transportation Corridor Project location, nature, purpose, beneficiaries of the Project, and reasons for being exempt from CEQA review. The Project will consist of the installation of bicycle and pedestrian paths within the Metro-owned ROW for the purpose of providing safe dedicated walking spaces and linkages within the City of Los Angeles. The reasons stated for the projectôs categorical exemption were: that the Project would not involve the removal of healthy, mature, scenic trees; would have no impacts on traffic, air quality, noise, and historical resources; and would follow Metro standards in complying with regulatory requirements from the South Coast Air Quality Management District (SCAQMD), Public Utilities Commission, and the DTSC.

3.4.2 Documentation for Categorical Exclusion (Metro, 2017b)

This document outlines the Metro Rail to Rail Active Transportation Corridor project, and the reasoning for its categorically exclusion under NEPA. Section 3.7 of this document discusses hazardous materials in association with the project. Properties reported as potentially impacting the project include Clean Harborôs LLC at 5756 Alba Street, a plating facility at 5816 South Central Avenue, and an industrial facility at 5716 McKinley Avenue. The plating facility may be the Southwest Plating Company, which adjoins the site to the south. A site reconnaissance of the Project area also reported locations of high risk of contamination. One of the areas of high risk was ñan identified wood mill that spilled wood residue onto the rail

ROW between Normandie Avenue and Budlong Avenueò, which are the extents of the site. Based on the regulatory database search and site reconnaissance, environmental sampling was conducted in approximate 1,000-foot linear intervals along the ROW. Levels of VOCs, PCBs, pesticides, and total petroleum hydrocarbons (TPH) were below screening levels. However, concentrations of arsenic, lead, and semi-VOCs (SVOCs) were above cleanup goals. To clean up soils contaminated with arsenic, lead, and SVOCs, Metro has entered into a VCP with DTSC. The spilled wood residue on our site is considered a REC. The potential presence of lead, arsenic, and SVOCs in connection with the ROW is also considered a REC.

3.4.3 Additional Environmental Assessment (Kleinfelder, 2017)

According to Kleinfelder, a 2016 soil sampling event was conducted by EFI Global, which advanced 36 soil borings in approximately 1,000-foot intervals along the length of the Rail to River Corridor ï Segment A, a 6.5-mile length of unused railroad ROW from the Fairview Heights Metro Station in the west to Santa Fe Avenue in the east, which includes the site. According to Kleinfelderôs summary of the 2016 soil sampling, select soil samples were analyzed for Title 22 Metals, organochlorine pesticides (OCPs), PCBs, TPHs, VOCs, and/or SVOCs. Elevated lead, arsenic, and SVOCs were reported in several samples collected. Elevated concentrations of OCPs, PCBs, TPHs, and VOCs were not reported. According to Kleinfelder, ñsoil sample analysis for this assessment was limited to the top 0.5 foot below the ballast or near surface.ò According to Kleinfelder, EFI Global advanced one boring (DPT-13) within the limits of the site, with soil samples collected at approximately 0.5 and 2 feet below ground surface (bgs) and analyzed for Title 22 Metals and SVOCs (other analyses on these samples, if any, were not specified). Analytical results showed:

- Lead (201 mg/kg at 0.5 feet bgs and 157 mg/kg at 2 feet bgs), below the DTSC screening level of 320 mg/kg for industrial land use, but above the DTSC screening level of 80 mg/kg for residential land use.
- Arsenic (95.2 mg/kg at 0.5 feet bgs and 47.9 mg/kg at 2 feet bgs), above the DTSC background concentration of 12 mg/kg.
- The SVOC pentachlorophenol (4.07 mg/kg at 0.5 feet bgs), above the EPA RSL.

In addition, Kleinfelder advanced four borings in August 2017 along the project in conjunction with a geotechnical soil investigation. These borings were not advanced within the site limits. The 2016 EFI Global report or 2017 Environmental Site Assessment Kleinfelder report were not provided to Ninyo & Moore for review.

Based on these results, Kleinfelder advanced 120 additional borings up to approximately 5 feet bgs in October 2017 within the project limits. Five borings (KLF-L-11 through -13, KLF-

O-5, and KLF-O-6) were planned to be advanced within the site. However, a soil stockpile was on the site at the time of the additional assessment, preventing Kleinfelder from advancing the proposed borings.

3.4.4 Percolation Test Report (HDR, 2019)

This report consisted of a review of percolation soil testing data collected along the Metro Rail to Rail Active Transportation Corridor. The document did not contain information pertinent to this environmental review report.

3.5 Adjoining Property History

Based on our review of historical documentation, adjoining property history was found to be as followed:

- **North** ï From 1923 to the present, properties to the north have contained a number of industrial properties, including several lumber mills, building material storage yards and warehouses, towing company, beer warehouse, mattress store, and others.
- **South** ï Slauson Avenue has adjoined the site to the south since 1922, beyond which have been a mixture of residential, commercial, and industrial properties. Properties of note to the south include a metal plating company, several auto repair shops, gasoline service stations, laundries, and others.
- **East** ï Budlong Avenue has adjoined the site to the east since 1922, beyond which is the continuation of the ROW. The vicinity to the east was mostly vacant land between 1923 and 1937, but by 1950 was developed with many residential structures.
- **West** ï Adjoining to the west has been Normandie Avenue since 1922, beyond which is the continuation of the ROW and a commercial property. The commercial property was lime and plaster storage from 1922 to 1961, and paint storage from 1966 to 1970.

4 FINDINGS

Based upon the results of this Phase I ESA, the following findings are provided.

- The site address is 5820 Normandie Avenue in Los Angeles, California. The associated Los Angeles County Assessorîs Parcel Number is 5002-015-900.
- The site has been a railroad ROW bordering Slauson Avenue to the north between 1923 and 2016. Equipment and materials often historically used in association with railroads, such as lead, ballast materials containing steel slag with potential regulated heavy metal concentrations, total petroleum hydrocarbon fuel leaks, PCB leaks, and railroad lubricators utilizing petroleum products, may have been used within the site. In addition, herbicides were often historically applied on railroad ROWs to prevent the growth of vegetation between railroad tracks. The presence of railroad tracks between 1923 and 2016 and associated staining observed in the 1970 aerial photograph is considered a REC.
- Several properties adjoining the site to the north and south were listed on several environmental databases, including gasoline service stations, dry cleaning facilities,

automotive repair shops, and plating facilities. The reported historical presence of USTs, former drycleaners, and listed releases of VOCs indicate that the site may have been impacted by these adjoining properties and is considered a VEC.

¶ Based on a review of the Documentation for Categorical Exemption (Metro, 2017b), a site reconnaissance of the Project area reported a risk of contamination from a ñwood mill that spilled wood residue onto the rail ROW between Normandie Avenue and Budlong Avenueò, which are the extents of the site. This is considered a REC to the site.

¶ Based on a review of the Documentation for Categorical Exemption (Metro, 2017b) and Kleinfelderôs Additional Site Assessment Report (Kleinfelder, 2017), environmental sampling was conducted in approximate 1,000-foot linear intervals along the ROW in 2016, with one boring advanced within the site limits. Elevated concentrations of arsenic, lead, and pentachlorophenol were reported in the soil samples collected at the site up to approximately 2 feet bgs. Elevated concentrations of arsenic, lead, and other SVOCs were reported in other samples collected along the project length. Kleinfelder conducted additional soil sampling along the project in 2017, but was unable collect soil samples on the site due to the presence of a soil stockpile. To clean up soils contaminated with arsenic, lead, and SVOCs, Metro has entered into a VCP with DTSC. A site reconnaissance of the Project area also reported locations of high risk of contamination. One of the areas of high risk was ñan identified wood mill that spilled wood residue onto the rail ROW between Normandie Avenue and Budlong Avenueò. The reported spilled wood residue on our site is considered a REC. Additionally, the potential presence of lead, arsenic, and SVOCs, TPH, and PCBs in connection with the ROW is considered a REC.

5 OPINIONS

The rationale for concluding whether or not the conditions listed in Section 4, above, do not represent RECs, Historical REC (HRECs), or Controlled RECs (CRECs) (i.e., the presence or likely presence of hazardous substances or petroleum products on a property under conditions indicative of releases, past releases, or a material threat of a release of hazardous substances, pollutants, contaminants, and/or petroleum/petroleum products at the site) is provided below. These opinions are preliminary in nature, and subject to change when additional documents are obtained and reviewed.

5.1 RECs

The following RECs were encountered during the preparation of this report:

¶ The site has been a railroad ROW since the early 1900s. Equipment and materials often historically used in association with railroads, such as lead, ballast materials containing steel slag with potential regulated heavy metal concentrations, total petroleum hydrocarbon fuel leaks, PCB leaks, and railroad lubricators utilizing petroleum products, may have been used within the site. In addition, herbicides were often historically applied on railroad ROWs to prevent the growth of vegetation between railroad tracks. Based on available information, wood residue was spilled on the site from an adjoining lumber mill, and limited soil sampling within the site vicinity indicated elevated levels of arsenic, lead, and the SVOC pentachlorophenol. Indications that site soil has been evaluated for OCPs, chlorinated herbicides, TPH, or PCBs was not found during the preparation of this report.

- Several properties adjoining the site to the north and south were listed on several environmental databases, including gasoline service stations, dry cleaning facilities, automotive repair shops, and plating facilities. The reported historical presence of USTs, former drycleaners, and listed releases of VOCs indicate that the site may have been impacted by these adjoining properties and is considered a VEC.

5.2 CRECs

CRECs were not encountered during the preparation of this report.

5.3 HRECs

HRECs were not encountered during the preparation of this report.

5.4 De Minimis Conditions

De minimis conditions were not encountered during the preparation of this report.

5.5 Data Gaps

Ninyo & Moore has requested several environmental documents from Metro concerning the site, including Phase II ESAs, soil management plans, remedial work plans, etc. To date, Ninyo & Moore has not received these documents. This is considered a data gap. If these reports are provided, the information should be included in the proposed full Phase I ESA for the site (see Section 6).

6 RECOMMENDATIONS

Based upon the findings of this study, Ninyo & Moore makes the following recommendations for the site. These recommendations are provided to evaluate the potential for construction worker exposure and for potential waste characterization purposes.

- Based on the potential for the site to be impacted by on-site and off-site sources, a full Phase I ESA should be conducted prior to obtaining title. In addition, based on the results of the recommended Phase I ESA, subsurface sampling of soil, soil vapor, and/or groundwater should be conducted in those areas of suspected impact mentioned in the recommended Phase I ESA.

- Groundwater is not expected to be encountered during construction as the expected depth to groundwater is approximately between 14 to 26 feet bgs. However, if construction plans change and groundwater will be encountered, we recommend collecting and analyzing groundwater samples for the constituents needed to apply for a construction dewatering discharge permit.

- During the construction of the project, soil will be excavated along the length of the ROW. Based on chemicals typically used along railroad tracks, there is a likelihood that residual chemicals may be present in the soil, included reported arsenic, lead, and pentachlorophenol in the western portion of the site in 2016. For waste characterization purposes, the soil should

be sampled and analyzed to evaluate for the presence of OCPs, chlorinated herbicides, metals, polycyclic aromatic hydrocarbons/SVOCs, TPHs, and PCBs. Soil samples should be collected at one foot vertical intervals to a depth of approximately 5 feet bgs along portions of the site within 25 feet of the rail center line. Surface samples should be analyzed for these target analytes. Deeper samples may be analyzed if significant concentrations of target analytes are detected. A previous investigation was conducted along the railroad ROW in 2017, which included the site. However, the site was covered with a soil stockpile, which prevented site soils from being characterized.

¶ A soil management plan and site-specific health and safety plan (HSP) detailing worker safety, vapor monitoring, soil testing, and soil removal should be prepared for this project.

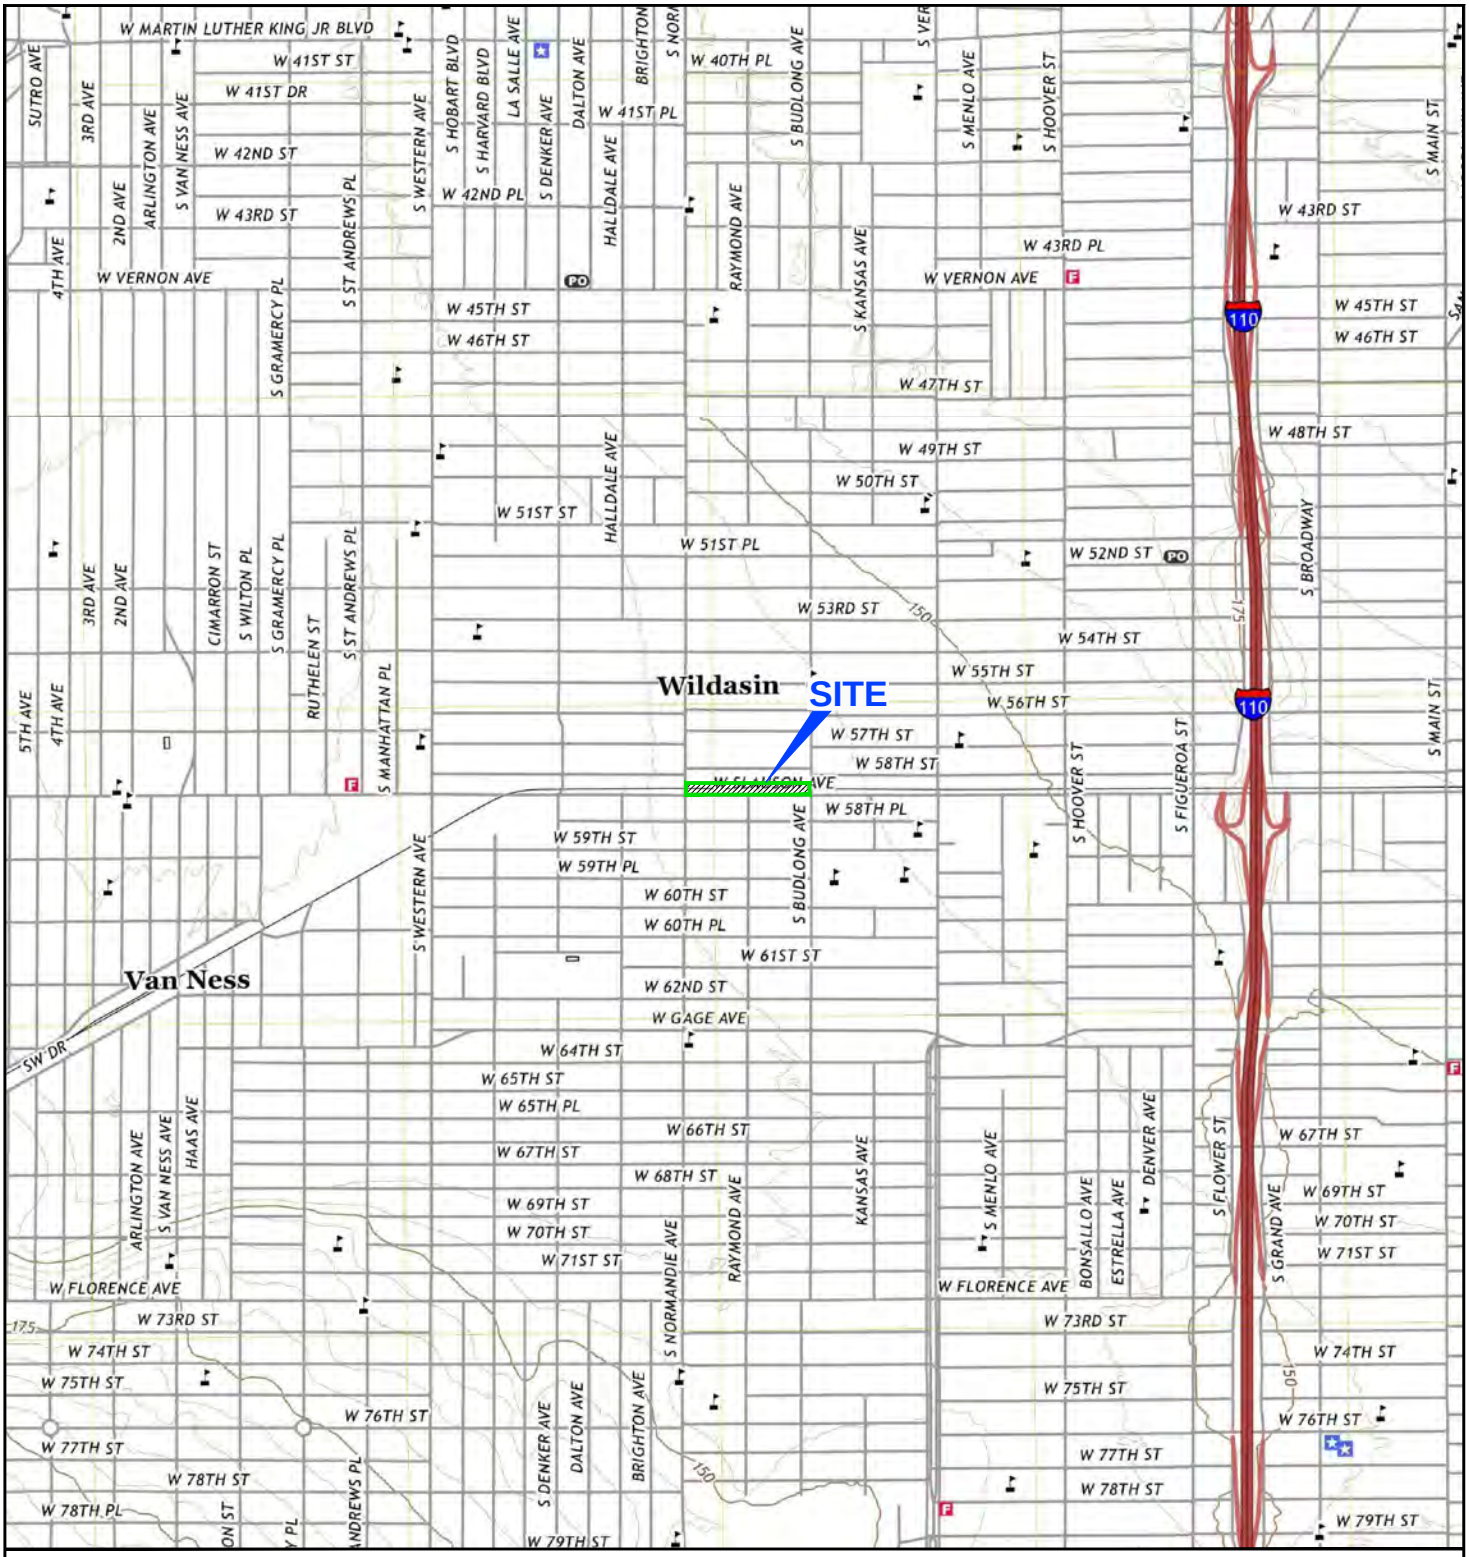
8 PROFESSIONAL STATEMENT

As required by 40 Code of Federal Regulations (CFR) Ä312.21(d) and Section 12.13 of ASTM 1527-13, the following statement is included:

> *I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by Ä312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.*



John Jay Roberts, PG, CEG
Principal Geologist

9 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

Resumes, which document the professional qualifications, pursuant to 40 CFR Ä312.10(b)(2), of the persons that prepared and reviewed this report are provided as Appendix D.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the

United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 15 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and

non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
SOUTHERN CALIFORNIA	S. ST. ANDREWS PLACE	WSW 1/2 - 1 (0.683 mi.)	93	439

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RISK AND TECHNOLOGY REVIEW
SUPERFUND (NON-NPL)
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site Name: SOUTHWEST PLATING CO
Violation Date: 08-18-2015
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 10/07/2015. OBSERVATION:All hazardous waste containers shall be closed at all times except when adding or removing waste. Observed two 5-gallon buckets of solution from nickel tank and spinner - both unlabeled and uncovered. Per operator, the waste collected in these buckets are combined with waste tretment tank contents. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.

Violation Date:	08-08-2018
Citation:	22 CCR 45 67450.7 - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.7
Violation Description:	Failure of the owner or operator of a facility who operates a transportable treatment unit (TTU) or fixed treatment unit (FTU) under a permit by rule to complete a corrective action program at the facility. The corrective action shall consist of a phase 1 environmental assessment, which shall be submitted within one year of the initial notification of permit by rule treatment, and a subsequent corrective action conducted as necessary to protect human health and the environment for all releases of hazardous waste or constituents from any solid or hazardous waste management unit at the facility, regardless of the time at which waste was placed in the unit.
Violation Notes:	Returned to compliance on 09/11/2018. OBSERVATION: Corrective action requirements have not been met for this facility, including but not limited to, completion of a phase 1 environmental assessment. CORRECTIVE ACTION: Submit the required corrective action documents, including a phase 1 environmental assessment, to the CUPA.

Citation:	22 CCR 15 66265.171 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.171
Violation Description:	Failure to accumulate hazardous waste in a container that is in good condition.
Violation Notes:	Returned to compliance on 10/07/2015. OBSERVATION: If a container holding hazardous waste is not in good condition (e.g. severe rusting, apparent structural defects), or it begins to leak, the generator shall transfer the hazardous waste to a container that is in good condition, or manage the waste in some other way that complies with Title 22 Hazardous Waste regulations. Observed deterioration at base of Cadmium STill tank (#21) holding cadmium cyanide, sodium cyanide and sodium hydroxide. Evidence of crystallization observed at base of tank along the left face/front of the tank. Additional crystallization of leaked contents observed within secondary containment and along the surface and rim of said tank. Observed leak at left top piping of degreaser tank CORRECTIVE ACTION: Immediately transfer the [note type of waste] waste to another container or manage in another way in accordance with Title 22 regulations.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher

FOSTER PLANING MILL CO (Continued) **S101617390**

Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

MJW INC DBA AMERICAN LAB & SYSTEMS (Continued) **S113175171**

Site Name:	AMERICAN LAB AND SYSTEMS
Violation Date:	04-17-2018
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 09/20/2018. OBSERVATION: A 40-gallon tank of waste oil located at the exterior east side of the manufacturing area was observedwithout an accumulation start date and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of waste oil and submit a copy of the manifest/receipt to the CUPA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RAPID ANODIZING LLC (Continued) **S125546461**

performance report every four years. The report shall contain sufficient detail to convey an understanding of the hazardous waste management approaches used at the site, using narratives, photographs, illustrations, figures or data as necessary, which includes, at a minimum, all of the following: 1) Name and location of the site 2) Four digit SIC code(s) for the site 3) All of the following information for each waste stream identified: A) An estimate, in pounds, of the quantity of hazardous waste generated and the quantity of hazardous waste managed, both onsite and offsite, during the current reporting year and the baseline year; B) A description of current hazardous waste management approaches and identification of all approaches implemented since the baseline year; C) An assessment of the effect, since the baseline year, of each implemented hazardous waste management approach on the weight of hazardous waste generated, the properties which cause it to be classified as a hazardous waste and/or the onsite and offsite management of hazardous waste. The report shall consider, but shall not be limited to all of the following approaches: 1. Source reduction; 2. Onsite or offsite recycling; 3. Onsite or offsite treatment; and D) A description of factors during the current reporting year that have affected hazardous waste generation and onsite and offsite hazardous waste management since the baseline year, including, but not limited to, any of the following: 1. Changes in business activity; 2. Changes in waste classification; 3. Natural phenomena and; 4. Other factors that have affected either the quantity of hazardous waste generated or onsite and offsite hazardous waste management requirements.

Violation Notes: Returned to compliance on 11/01/2014. OBSERVATION: Seven 5 gallon buckets with used oil are not labeled as hazardous waste and missing accumulation start dates. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95

RIVKAH INC (Continued) **S113145913**

	percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 08/07/2019. OBSERVATION: The inspection of all required overfill prevention equipment listed in CERS was not completed and submitted to the CUPA by 10/13/2018. CERS states "Yes" to Flappers only. CORRECTIVE ACTION: Overfill prevention equipment listed in CERS was inspected on this date by Peyman Nasibi with Pacific Nozzle. CORRECTED ON SITE. Ensure inspection results are submitted by email to the CUPA within 30 days. Next overfill prevention equipment inspection must be completed by 10/2021.

Violation Date: 08-07-2019
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: OBSERVATION: Monthly DO reports from 12/2018 through 5/2019 were not signed by owner-operator. Beginning 10/2018, each Monthly Designated Operator report is required to be reviewed and signed by the Owner-Operator (regardless of whether alarms or compliance actions were noted) within 48 hours of receiving the report AND to indicate any corrective actions taken (if required) AND to attach documentation

RIVKAH INC (Continued) **S113145913**

of actions taken to address alarms. CORRECTIVE ACTION: Immediately ensure November, 2018 and March, May, June and July2019 Monthly Designated Operator reports are signed by the Owner-Operator. Ensure all future monthly Designated Operator reports are signed by Owner-Operator, list the actions taken by Owner-Operator to address compliance issues and have written documentation attached that describe the action taken to properly address alarms. EMAIL THIS INSPECTOR copies of the December 2018 through May 2019 Monthly Designated Operator reports signed by the Owner-Operator [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type: Environmental Oversight Agreement
Completed Date: 02/10/2000
Comments: Not reported

Completed Area Name: Off-Site Area (5845 S. Hoover St.)
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 12/17/2008
Comments: On December 17, 2008, DTSC requested a response from Ben & Eleanor Family Trust regarding conducting further investigation at 5845 Hoover Avenue, Los Angeles.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 08/19/2008
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 06/15/2011
Comments: DTSC certified that response action according to DTSC-approved RAW is complete. Operation and maintenance is required.

Completed Area Name: Off-Site Area (5845 S. Hoover St.)
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 06/04/2012
Comments: Via email on June 4, 2012, DTSC received a PDF file of the LARWQCB concurrence letter regarding the Interim Remedial Action Plan for the V&A Car Wash area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 11/21/2011
Comments: DTSC prepared project close out Cost Recovery Unit Memorandum.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: No Further Action Letter
Completed Date: 11/21/2011
Comments: DTSC reviewed the soil gas monitoring report and made a No Further Action determination for the Site.

Completed Area Name: Off-Site Area (5845 S. Hoover St.)
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 12/21/2010
Comments: On December 21, 2010, DTSC requested the Los Angeles Regional Water Quality Control Board to take appropriate action regarding underground storage tanks (USTs) from a former service station and

SOUTH LOS ANGELES HIGH SCHOOL NO. 3 (Continued) **S107737376**

auto repair shop area, located adjacent to the Site. The USTs appear to be the source of benzene contamination in soil gas at the Site.

Completed Document Type: Other Report
Completed Date: 10/09/2007
Comments: Background Information Only

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/02/2010
Comments: Via email on July 2, 2010, DTSC concurred with the use of 6,200 cubic yards of soil excavated from and stockpiled at the Span K-8 #1 School site as import fill at the SLAHS#3 site.

SOUTH LOS ANGELES HIGH SCHOOL NO. 3 (Continued) **S107737376**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/08/2010
Comments: Via email on July 8, 2010, DTSC concurred with use of the 6,500 cubic yard stockpiled soil (excavated from the former Westside Park area of the SRHS#7 site) as import fill for the SLAHS#3 site provided DTSC determined no further action regarding the area from where the soil originated. Via email on July 28, 2010, DTSC was informed that 5,000 cubic yards of the soil was hauled to the Site; the remaining 1,500 cubic yards is to be used elsewhere.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/08/2010
Comments: Via email on April 8, 2010, DTSC concurred that the import material (clean screened fill sand and gravel) is acceptable for use at the SLAHS#3 site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/13/2010
Comments: Via email on April 13, 2010, DTSC concurred that the import material (crushed aggregate base and sand) is acceptable for use at the SLAHS#3 site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/13/2010
Comments: Via email on April 13, 2010, DTSC concurred that the import material (crushed aggregate base) is acceptable for use at the SLAHS#3 site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/22/2010
Comments: Via email on July 7, 2010, DTSC indicated to LAUSD that a response to the Report, dated November 30, 2009, will not be provided; however, the report will be used as background information for the O&M Plan. The Report summarizes activities related to installation of a shoring wall in an area south of the off-site car wash facility, incluidng air and soil sampling results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/30/2010
Comments: Via email on July 30, 2010, DTSC concurred that 14,500 cubic yards of soil from UCLA may be used as import fill at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 12/02/2010

SOUTH LOS ANGELES HIGH SCHOOL NO. 3 (Continued) **S107737376**

Comments: On December 2, 2010, DTSC indicated that additional soil gas sampling is necessary 1) to the north and west of the off-site car wash facility to confirm no impact to the school and 2) to the south of the existing soil gas probes to determine the extent of impact. DTSC requested a figure identifying the proposed additional soil gas sample locations at least seven days prior to the December 2010 sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 02/14/2011
Comments: On February 14, 2011, DTSC provided comments on the Report and requested the comments be addressed in future monitoring reports.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 05/09/2011
Comments: Via email on May 9, 2011, DTSC indicated to LAUSD that, based on the Report, the newest soil gas probes, SV-7 and SV-8, showed elevated levels of benzene. After the June 2011 sampling event, DTSC indicated it will make a decision regarding the need for further action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 08/23/2011
Comments: DTSC reviewed the soil gas monitoring report and had no comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 10/05/2010
Comments: Via email on October 5, 2010, DTSC indicated it has no further concerns regarding the soil from cells IPH-1, IPH-2, and IPH-7 at UCLA to be used as import fill for the athletic field at SLAHS#3.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 11/01/2010
Comments: Via email on November 1, 2010, DTSC responded that import fill material from the Proposed Bell Education and Learning Center site may be used as import fill at SLAHS#3. 10,000 cubic yards of import soil is to be deposited in the athletic field at SLAHS#3.

Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 06/15/2011
Comments: DTSC certified that response action according to DTSC-approved RAW is complete. Operation and maintenance is required.

Completed Area Name: Off-Site Area (5845 S. Hoover St.)
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 06/04/2012
Comments: Via email on June 4, 2012, DTSC received a PDF file of the LARWQCB concurrence letter regarding the Interim Remedial Action Plan for the V&A Car Wash area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 11/21/2011
Comments: DTSC prepared project close out Cost Recovery Unit Memorandum.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: No Further Action Letter
Completed Date: 11/21/2011
Comments: DTSC reviewed the soil gas monitoring report and made a No Further Action determination for the Site.

Completed Area Name: Off-Site Area (5845 S. Hoover St.)
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 12/21/2010
Comments: On December 21, 2010, DTSC requested the Los Angeles Regional Water Quality Control Board to take appropriate action regarding underground storage tanks (USTs) from a former service station and auto repair shop area, located adjacent to the Site. The USTs appear to be the source of benzene contamination in soil gas at the Site.

Completed Date: 10/09/2007
Comments: Background Information Only

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/02/2010
Comments: Via email on July 2, 2010, DTSC concurred with the use of 6,200 cubic yards of soil excavated from and stockpiled at the Span K-8 #1 School site as import fill at the SLAHS#3 site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/08/2010

SOUTH LOS ANGELES HIGH SCHOOL NO. 3 (Continued) **S107737376**

Comments: Via email on July 8, 2010, DTSC concurred with use of the 6,500 cubic yard stockpiled soil (excavated from the former Westside Park area of the SRHS#7 site) as import fill for the SLAHS#3 site provided DTSC determined no further action regarding the area from where the soil originated. Via email on July 28, 2010, DTSC was informed that 5,000 cubic yards of the soil was hauled to the Site; the remaining 1,500 cubic yards is to be used elsewhere.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/08/2010
Comments: Via email on April 8, 2010, DTSC concurred that the import material (clean screened fill sand and gravel) is acceptable for use at the SLAHS#3 site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/13/2010
Comments: Via email on April 13, 2010, DTSC concurred that the import material (crushed aggregate base and sand) is acceptable for use at the SLAHS#3 site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/13/2010
Comments: Via email on April 13, 2010, DTSC concurred that the import material (crushed aggregate base) is acceptable for use at the SLAHS#3 site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/22/2010
Comments: Via email on July 7, 2010, DTSC indicated to LAUSD that a response to the Report, dated November 30, 2009, will not be provided; however, the report will be used as background information for the O&M Plan. The Report summarizes activities related to installation of a shoring wall in an area south of the off-site car wash facility, incluidng air and soil sampling results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/30/2010
Comments: Via email on July 30, 2010, DTSC concurred that 14,500 cubic yards of soil from UCLA may be used as import fill at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 12/02/2010
Comments: On December 2, 2010, DTSC indicated that additional soil gas sampling is necessary 1) to the north and west of the off-site car wash facility to confirm no impact to the school and 2) to the south of the existing soil gas probes to determine the extent of impact. DTSC

SOUTH LOS ANGELES HIGH SCHOOL NO. 3 (Continued) **S107737376**

requested a figure identifying the proposed additional soil gas sample locations at least seven days prior to the December 2010 sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 02/14/2011
Comments: On February 14, 2011, DTSC provided comments on the Report and requested the comments be addressed in future monitoring reports.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 05/09/2011
Comments: Via email on May 9, 2011, DTSC indicated to LAUSD that, based on the Report, the newest soil gas probes, SV-7 and SV-8, showed elevated levels of benzene. After the June 2011 sampling event, DTSC indicated it will make a decision regarding the need for further action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 08/23/2011
Comments: DTSC reviewed the soil gas monitoring report and had no comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 10/05/2010
Comments: Via email on October 5, 2010, DTSC indicated it has no further concerns regarding the soil from cells IPH-1, IPH-2, and IPH-7 at UCLA to be used as import fill for the athletic field at SLAHS#3.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 11/01/2010
Comments: Via email on November 1, 2010, DTSC responded that import fill material from the Proposed Bell Education and Learning Center site may be used as import fill at SLAHS#3. 10,000 cubic yards of import soil is to be deposited in the athletic field at SLAHS#3.

Completed Area Name: Off-Site Area (5845 S. Hoover St.)

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Version Date:	2012
North Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

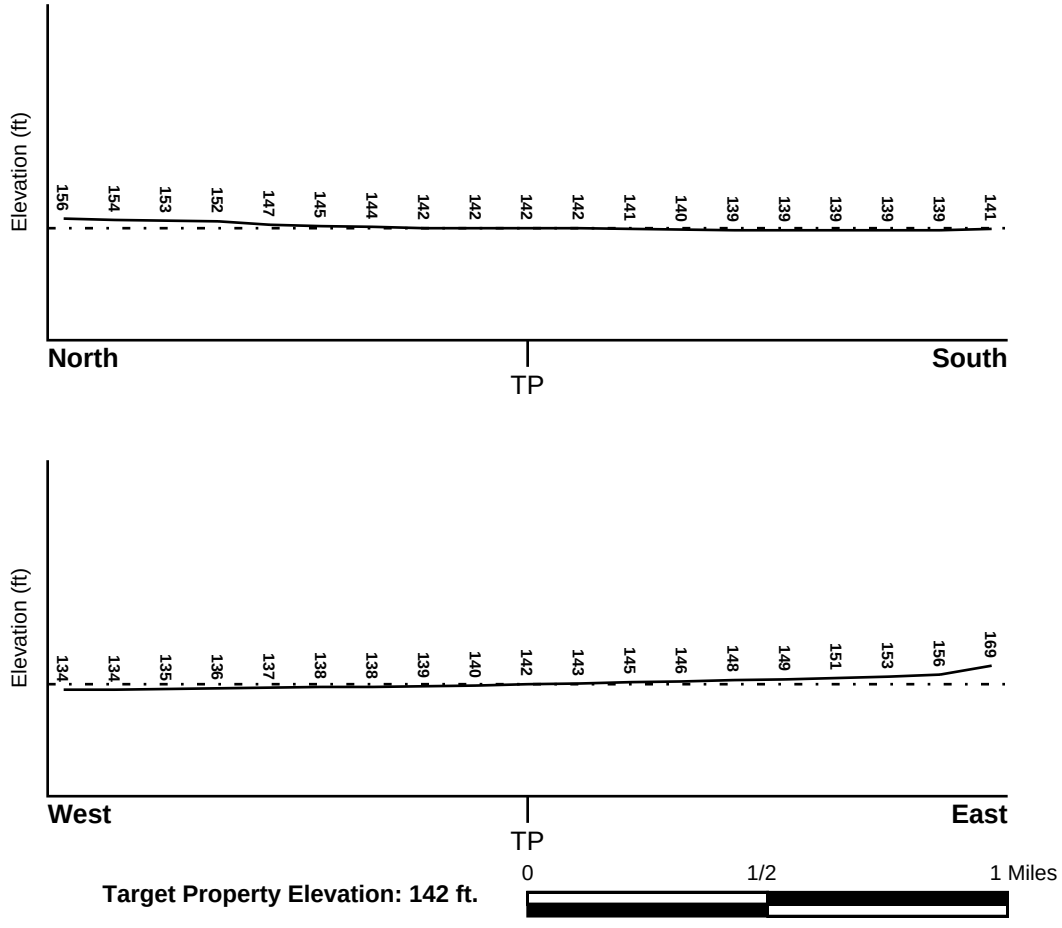
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1785F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1620F	FEMA FIRM Flood data
06037C1780F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
INGLEWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	Dept. Of Public Works
Site EPA ID Number:	CAD981989049
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet.
Hydraulic Connection:	Aquitards separate the aquifers under the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
77	1/2 - 1 Mile SSE	S
1G	1/2 - 1 Mile SSE	S

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
